*Ethical Issues in Neurology* James L. Bernat 2008  
Written by an eminent authority from the American Academy of Neurology's Committee on Ethics, Law, and Humanities, this book is an excellent text for all clinicians interested in ethical decision-making. The book features outstanding presentations on dying and palliative

care, physician-assisted suicide and voluntary active euthanasia, medical futility, and the relationship between ethics and the law. New chapters in this edition discuss how clinicians resolve ethical dilemmas in practice and explore ethical issues in neuroscience research. Other highlights include updated material on palliative sedation, advance directives, ICU withdrawal of

life-sustaining therapy, gene therapy, the very-low-birth-weight premature infant, the developmentally disabled patient, informed consent, organizational ethics, brain death controversies, and fMRI and PET studies relating to persistent vegetative state.

#### Services for People with Learning Disabilities

Nigel Malin 2002-11-01 Services for People with Learning Disabilities provides a broad review of available services for people with learning disabilities. It describes the present network of services and explains the NHS and Community Care Act (1990) in terminology accessible to health care professionals and others engaged in this area. It looks in detail at the concepts underpinning new legislation, including care-management and assessment, quality and inspection, and inter-agency planning, and it supplies up-to-date information on current topics such as advocacy and empowerment, and recreation and leisure. An invaluable resource for all practitioners in health and community care,

Services for People with Learning Disabilities will also give professionals and carers a much greater understanding of the changes and improvements that are still needed.

#### **Reproductive and Perinatal Epidemiology**

Michele Kiely 2019-06-04 First Published in 1990, Reproductive and Perinatal Epidemiology reviews topics that are central to reproductive and perinatal epidemiology, as well as the methodological issues surrounding research in maternal and child health. Important topics covered include prenatal care, Sudden Infant Death Syndrome (SIDS), epidemiology of neonatal brain hemorrhage, early pregnancy, methodological issues in drug epidemiology, environmental exposures and reproduction, and occupational exposures and reproduction. This book is essential reading for clinicians, researchers, obstetricians, pediatricians, and

graduate students in public health.

*The Modern Management of Mental Handicap*

G.B. Simon 2012-12-06 The aim of this book is to provide parents, staff and others involved with mentally handicapped children and adults with up to-date basic information and advice in their management. Methods of care, treatment and management of a heterogeneous group of people such as the mentally handicapped must of necessity include many disciplines if they are to be given an adequate service. This book is an attempt to bring the knowledge and experience of many people together. The size of the book could have been increased to include more detail on other aspects of the subject but this might easily have diminished its value as a convenient reference to as wide a readership as possible, both professional and non-professional. The contents deal essentially with the needs of the severely mentally handicapped and should have an application in most parts of the world. Much of the information and advice on services, and on

treatment and management, is based on the experience of specialists working in the United Kingdom, this now being standard practice in most parts of the world.

**Psychology and Education of Slow Learners**

Roy I. Brown 2017-09-13 Originally published in 1976, this introductory text for those intending to work with slow learners was concerned with the practical implications of recent British and North American research in the field of psychology and education at the time. Slow learners are young people who for a variety of reasons, continuously or for long periods, under-function in terms of intelligence, educational attainment and social skills. This book offers a clear analysis of the

problems facing slow learners, their psychology and the types of education open to them. Dr Brown reassesses the needs of disabled children and adults in the context of their families, with the emphasis on the practical level of activity and training possible for them. The aim is the integration of the disabled person in society, and the belief is that services for the disabled should be integrated, with no professional person working on an isolated basis, but as part of a multidisciplinary professional team. Design for individuals entering the field of teaching, particularly those concerned with special education, training and rehabilitation programmes, the book should also be of value to social workers, psychologists and other professional people working in the field, as well as to parents of disabled children.

*Learning, Speech and Thought in the Mentally Retarded* A. D. B. Clarke 2014-05-19 Learning, Speech and Thought in the Mentally Retarded contains the proceedings of Symposia 4 and 5

held at the Middlesex Hospital Medical School in London on October 31, 1969 and March 20, 1970, respectively, under the auspices of the Institute for Research into Mental Retardation. This monograph presents topical problems in mental retardation, with emphasis on learning processes, speech, and thought. The application of operant learning techniques to the development of language in the retarded is highlighted. This book is comprised of four chapters and begins by outlining directions in research on learning deficits, followed by a discussion on teaching processes in the care of severely retarded children. The next chapter deals with speech and thought in the mentally retarded, with particular reference to two basic problems: the relative priority of language or thought and the selection processes underlying language. The final chapter explores language delay and language deviation in mentally retarded children. Throughout the book, the focus is on language: its nature, its development

in the constitutionally normal and handicapped, some theoretical controversies among experts in this field, and the development of appropriate techniques for teaching language to the mentally retarded. This monograph will be useful to psychologists and clinicians working in the field of mental retardation.

**Child and Adolescent Psychiatry, Mental Retardation, and Geriatric Psychiatry** P. Pichot 2013-03-14 The purpose of the World Psychiatric Association is to coordinate the activities of its Member Societies on a world-wide scale and to advance enquiry into the etiology,

pathology, and treatment of mental illness. To further this purpose, the Association organizes mono- or multithematic Regional Symposia in different parts of the world twice a year, and World Congresses dealing with all individual fields of psychiatry once every five or six years. Between these meetings the continuation of the Association's scientific work is assured through the activities of its specialty sections, each covering an important field of psychiatry. The programs of the World Congresses reflect on the one hand the intention to present the coordinating functions of the Association and on the other to open a broad platform for a free exchange of views. Thus, the VII World Congress of Psychiatry, held in Vienna from July 11 to 16, 1983, was composed of two types of scientific events - those structured by the Association and those left to the initiative of the participants. The first type comprised Plenary Sessions, planned by the Scientific Program Committee, and Section Symposia, organized by the WPA sections; the

second embraced Free Symposia, free papers, video sessions, and poster presentations prepared by the participants. Altogether, 10 Plenary Sessions, 52 Section Symposia, and 105 Free Symposia took place, and 78 free papers and poster sessions and 10 video sessions were held.

*Issues in the Developmental Approach to Mental Retardation* Robert M. Hodapp 1995-01-27 One of the first books exclusively devoted to applying the theories and approaches used in work with nonretarded children to types of retarded individuals defines the developmental approach and explores theoretical issues as they relate to retarded populations.

*Serious Mental Illness* Abraham Rudnick 2018-08-17 Practical and evidence-based, this unique book is the first comprehensive text focused on person-centered approaches to people with serious mental illness such as schizophrenia and bipolar disorder. It reflects a range of views and findings regarding

assessment, treatment, rehabilitation, self-help, policy-making, education and research. It is highly recommended for all healthcare professionals, students, researchers and educators involved in general practice, psychiatry, nursing, social work, clinical psychology and therapy. Healthcare service providers, and policy makers and shapers, will find the book's wide-ranging, multi-professional approach enlightening. 'Serious Mental Illness reflects a continued distancing from the outmoded and unsubstantiated belief that people with severe mental illnesses could not recover, and that they would respond positively only to goals and treatment plans chosen, designed and implemented by providers in order to prevent their further deterioration. Anyone with an interest in the concept of person-centered approaches will discover new ideas in this book. Indeed, anyone with an interest in person-centered approaches has to read this book. Not only is it the first such book on person-centered

approaches, but it will serve as the gold standard in this topic area for years to come.' William A Anthony, in the Foreword

### **Prospects for People with Learning**

**Difficulties** Stanley Segal 2018-09-03 First published in 1991. This work, published in honour of Professor Peter Mittler, is concerned with the prospects for people with severe learning difficulties and how they have developed since the 1960s. The internationally known team of contributors provide not only an overview of the developments in their fields but also speculate on future developments, both positive and negative.

This collection of books from some of the leading scholars in the field provides a comprehensive overview of the

subject how it has evolved over time, and will be of particular interest to students of Education and those undertaking teaching qualifications.

Mental Retardation Brian H. Kirman 2014-05-17

Mental Retardation summarizes some developments in the study of the causes and social effects of mental retardation. The problem of definition and recognition is emphasized, along with its relationship to frequency and to the changes that have occurred in the natural history and prevalence of mental handicap in general and of some of its specific constituent disorders in particular. This book covers a wide range of topics related to mental retardation, from its prevalence and causes to prevention and treatment; chemical disorders and other enzyme defects; the effect of a hypothetical restriction of child-bearing age on trisomic chromosome disorders; and recessive heredity and Mendelian inheritance. Prominence is given to habilitation in the prevention of secondary handicap and to the importance of minimizing cultural retardation.

Genetic disorders and their detection are also discussed, along with the link between cerebral palsy and mental retardation; the correlation between blood groups and mental retardation; and congenital malformations such as hydrocephalus, spina bifida, and anencephaly. This monograph will be a valuable resource for physicians and other health professionals in the field of mental retardation, as well as students of the social sciences, education and medicine and by others who wish to have a simple guide to a complex and common form of human impairment.

International Handbook of Applied Research in Intellectual Disabilities Eric Emerson 2004-08-13  
The landmark International Handbook of Applied Research in Intellectual Disabilities presents, explains, and illustrates key methods of research and evaluation of proven relevance and value to the field of intellectual disabilities. It features sections on the concepts and theoretical models underlying research and evaluation, the methods

and techniques themselves, and the key application areas where the methods are demonstrated in action. Coverage includes applications in educational, social, family, health, and employment aspects of care and provision for those with intellectual disabilities.

The Mentally Subnormal Margaret Adams  
2014-05-20 The Mentally Subnormal: Social Work Approaches, Second Edition provides a discussion of the various issues faced by mentally challenged individuals. The book is comprised of eight chapters that talk about the role of social workers in mitigating the problem. The text first details the development of ideas and legislation relating to the mentally subnormal, and then proceeds to presenting a view of the issue in a medical perspective. The next chapter discusses the principles of casework in the field. Chapter 4 talks about the role of community social care, while Chapter 5 deals with social services to the mentally retarded and their families. The sixth chapter covers social work in residential settings.

The remaining chapters tackle the employment problem of mentally handicapped and the implications for services of social research in mental retardation. The book will be of great interest to students, researchers, and practitioners of disciplines that deal with the implication of mental incapacity for society, such as psychology, sociology, and psychiatry.

Twenty-two Years Stephen A. Richardson 1996

Twenty-Two Years presents the results of a unique longitudinal study of the first 22 years in the lives of more than 200 young people with varying degrees of mental retardation. By following their paths through available services, job histories, leisure activities, friendships, and marriages, the authors provide objective information about the quality of life of young people with mental retardation. The book makes a unique contribution by determining what factors in childhood predict who will and who will not require mental retardation services and, for those who disappear from services, why some

fare better than others. Most important, the results help answer a question that haunts parents: "What will happen when my child grows up?" This study expands on an internationally acclaimed clinical and epidemiological study of children with mental retardation published in 1970. It provides prevalence rates by severity of mental retardation, gender, social class, and family stability, and shows how these change over time. The authors confirm the central role of biomedical factors in the etiology of severe mental retardation. For the etiology of mild mental retardation, the book examines the relative contributions of biomedical and intergenerational genetic factors as well as psychosocial adversity. The book should be of interest to a broad range of clinicians, researchers, and students, as well as the families of people with mental retardation, and it will serve as a model for future epidemiological and follow-up research.

Albrecht 2001-05-24 This path-breaking Handbook of Disability Studies signals the emergence of a vital new area of scholarship, social policy and activism. Drawing on the insights of disability scholars around the world and the creative advice of an international editorial board, the book engages the reader in the critical issues and debates framing disability studies and places them in an historical and cultural context. Five years in the making, this one volume summarizes the ongoing discourse ranging across continents and traditional academic disciplines. The Handbook answers the need expressed by the disability community for a thought provoking, interdisciplinary, international examination of the vibrant field of disability

**Transition and Change in the Lives of People with Intellectual Disabilities** David May 2000-12

One claim made for the policy of care in the community was that it would rescue people with intellectual disabilities from social marginality. To what extent has this promise been fulfilled and their lives transformed? David May presents the lives of people from this group as a series of transitions and offers us a view of the world that is as complex and changeable as any other. Each section covers a different aspect of choice, opportunity and transition on the lifepath, for example, \* moving from home to school \* leaving school \* employment \* living independently and \* growing old The contributors have extensive research experience in the field

of intellectual disabilities and provide a comprehensive review of this research, drawing out the implications for policy and practice. This book will be an invaluable resource for professionals and carers working with those with intellectual disabilities, as well as their families.

Ellis' Handbook of Mental Deficiency, Psychological Theory and Research William E. MacLean Jr. 2012-12-06 In the 16 years since the publication of the second edition of this volume, psychological theory and research in mental retardation has continued to expand and extend scientific, theoretical, and clinical understanding

of this most complex and challenging human condition. Explicit effort has been made to translate theory and research into useful and efficacious assessment, intervention, prevention, and policy actions. This third edition provides an opportunity to critique major conceptual developments and empirical research in an effort to stimulate further behavioral research of practical, social importance. The Handbook presents work by prominent contributors to a major scientific endeavor that has grown dramatically during the last three decades. The challenge for each author was to identify important theoretical and empirical issues, provide a critical, selective review of exemplary research, and discuss the questions that remain unanswered in each area. In short, the goal for this third edition was to consolidate the knowledge gained during the past 30 years and to present a blueprint for future research in mental retardation, the broader field of learning disabilities, and other developmental disorders

such as autism. Providing totally different coverage and direction from the previous edition, this text fills a crucial instructional need in graduate courses related to the psychology of mental retardation. With its emphasis on psychological research and theory, it offers an important alternative to many available texts that primarily emphasize the application of research.

### **Bibliography on Speech, Hearing, and Language in Relation to Mental Retardation**

Maryann Peins 1969 About 1969 references written in the English language about the communicative behavior of the mentally retarded. Articles, books, chapters, theses, dissertations, and reports included. No index.

### **Linguistic Disorders and Pathologies**

Gerhard Blanken 1993-01-01 This series of HANDBOOKS OF LINGUISTICS AND COMMUNICATION SCIENCE is designed to illuminate a field which not only includes general linguistics and the study of linguistics as applied

to specific languages, but also covers those more recent areas which have developed from the increasing body of research into the manifold forms of communicative action and interaction. For "classic" linguistics there appears to be a need for a review of the state of the art which will provide a reference base for the rapid advances in research undertaken from a variety of theoretical standpoints, while in the more recent branches of communication science the handbooks will give researchers both an overview and orientation. To attain these objectives, the series will aim for a standard comparable to that of the leading handbooks in other disciplines, and to this end will strive for comprehensiveness, theoretical explicitness, reliable documentation of data and findings, and up-to-date methodology. The editors, both of the series and of the individual volumes, and the individual contributors, are committed to this aim. The languages of publication are English, German, and French. The main aim of the series is to

provide an appropriate account of the state of the art in the various areas of linguistics and communication science covered by each of the various handbooks; however no inflexible pre-set limits will be imposed on the scope of each volume. The series is open-ended, and can thus take account of further developments in the field. This conception, coupled with the necessity of allowing adequate time for each volume to be prepared with the necessary care, means that there is no set time-table for the publication of the whole series. Each volume will be a self-contained work, complete in itself. The order in which the handbooks are published does not imply any rank ordering, but is determined by the way in which the series is organized; the editor of the whole series enlist a competent editor for each individual volume. Once the principal editor for a volume has been found, he or she then has a completely free hand in the choice of co-editors and contributors. The editors plan each volume independently of the others, being governed only

by general formal principles. The series editor only intervene where questions of delineation between individual volumes are concerned. It is felt that this (modus operandi) is best suited to achieving the objectives of the series, namely to give a competent account of the present state of knowledge and of the perception of the problems in the area covered by each volume.

**Mental Deficiency** John Duncan 1938

*Ameliorating Mental Disability* Alfred A.

Baumeister 2017-07-12 This book grows out of the optimistic view that mental retardation can be treated. It views mental retardation primarily as a behavioral problem. A child is diagnosed as retarded primarily because he behaves in certain maladaptive ways, not simply because he may have a chromosomal anomaly. The contributors view any intervention intended to produce adaptive changes in the behavior of the retarded as "treatment." The authors come from the fields of medicine, special education, and speech and hearing, as well as from psychology. The book is

intended to help students and workers in the field apply research findings and theoretical formulations in their appraisal and treatment of mental retardation. The primary emphasis of the book is empirical. While many of the author's suggestions have not been subjected to rigorous experimental scrutiny, almost all have been derived from close examination of the research literature. A wide diversity of topics are included in this volume. Criteria employed were the relevance of the topic to the understanding and modification of defective behavior; and the subject's popularity or neglect in other sources. Ameliorating Mental Disability will be of interest to medical officers in institutions for the mentally challenged, lecturers giving courses for teachers of the educationally subnormal, and to psychologists, social workers, and teachers.

**Selected Annotated Bibliography on Mental Retardation for Social Workers** United States. Children's Bureau 1963  
Mental Retardation and Mental Health Jack A.

Stark 2012-12-06 In late 1985, The President's Committee on Mental Retardation (PCMR) sponsored a National Strategy Conference on Mental Retardation and Mental Health in Washington, D.C. The purpose of this conference was to bring together our nation's leadership in the fields of mental retardation and mental health in order to delineate the state of the art relative to the diagnosis, care, and treatment of citizens with mental retardation/mental illness, as well as to chart a national course for the support and integration of citizens with these challenging needs into the confluence of family and community life. The President's Committee on Mental Retardation recognized that citizens with these needs constitute one of the most underserved and, at times, forgotten segments of the population. With this in mind, the PCMR called together government, professional, and parental representatives from across the nation to define the nature and extent of the problem, programs, and services that promise hope for

substantive improvement in the quality of life of citizens with mental retardation/mental illness.
