Oral and Literate Culture in England, 1500-1700 Adam Fox 2000-11-09 This book explores the varied vernacular forms and rich oral traditions which were such a part of popular culture in early modern England. It focuses, in particular, upon dialect speech and proverbial wisdom, "old wives' tales" and children's lore, historical legends and local customs, scurrilous versifying and scandalous rumour-mongering. Adam Fox argues that while the spoken word provides the most vivid insight into the mental world of the majority in this semi-literate society, it was by no means untouched by written influences. Even at the beginning of the period, centuries of reciprocal infusion between complementary media had created a cultural repertoire which had long ceased to be purely oral. Thereafter, the expansion of literacy together with the proliferation of texts both in manuscript and print saw the rapid acceleration and elaboration of this process. By 1700 popular traditions and modes of expression were the product of a fundamentally literate environment to a much greater extent than has yet been appreciated.

Absolute Clinical Radiation Oncology Review Daniel M. Trifiletti 2019-01-22 This book provides a quick reference guide for clinicians in radiation oncology. It is designed to be an intuitive and easily reviewed study guide for board or maintenance of certification examinations, as well as a quick reference for residents and established radiation oncologists who need a refresher. The text begins with a general pearls chapter that radiation oncologists should consider in all aspects of their practice, including cancer visibility, dosing, counseling recommendations, and toxicity management. The subsequent chapters then delve into different cancer disease sites, including pediatrics, central nervous system, head and neck, thoracic, breast, gastrointestinal, gynecologic, genitourinary, hematologic, soft tissue, palliative, and radiophysics/radiobiology. Within each chapter, each disease and its recommended approach is then summarized in only a few pages, allowing a focus on the most essential information. Bullet points, figures, tables, and images make for an intuitive reader experience. Recommendations are taken from the American Society for Radiation Oncology (ASTRO), the European Society for Radiation Oncology (ESTRO), and the National Comprehensive Cancer Network (NCCN).

Planning guides for imaging, diagnosis, and staging offer readers a starting point in approaching each patient based on disease origin, and dosing guidelines then detail consideration for treatment methods. Each chapter additionally includes disease-specific pearls and key points to test the knowledge reviewed in the chapters. Experts in the disease sites from the United States serve as senior authors on each chapter. The authors include all diseases associated with radiation oncology training to ensure a comprehensive resource for exam studying and clinical care. Residents, trainees, and established radiation oncologists find this an ideal study resource for both board and certification exams, as well as an easily accessible aid during practice.

The Managed Heart Arlie Russell Hochschild 2012-03-31 In private life, we try to induce or suppress love, envy, and anger through deep acting or "emotion work," just as we manage our outer expressions of feeling through surface acting. In trying to bridge a gap between what we feel and what we "ought" to feel, we take guidance from "feeling rules" about what is owing to others in a given situation. Based on our private mutual understandings of feeling rules, we make a "gift exchange" of acts of emotion management. We bow to each other not simply from the waist, but from the heart. But what occurs when emotion work, feeling rules, and the gift of exchange are introduced into the public world of work? In search of the answer, Arlie Russell Hochschild closely examines two groups of public-contact workers: flight attendants and bill collectors. The flight attendant's job is to deliver a service and create further demand for it, to enhance the status of the customer and be "nicer than natural." The bill collector's job is to collect on the service, and if necessary, to deflate the status of the customer by being "nastier than natural." Between these extremes, roughly one-third of American men and one-half of American women hold jobs that call for substantial emotional labor. In many of these jobs, they are trained to accept feeling rules and techniques of emotion management that serve the company's commercial purpose. Just as we have seldom recognized or understood emotional labor, we have not appreciated its cost to those who do it for a living. Like a physical laborer who becomes estranged from what he or she makes, an emotional laborer, such as a flight attendant, can become estranged not only from her own expressions of feeling (her smile is not "her" smile), but also from what she actually feels (her managed friendliness). This estrangement, though a valuable defense against stress, is also an important occupational hazard, because it is through our feelings that we are connected with those around us. On the basis of this book, Hochschild was featured in *Key Sociological Thinkers*, edited by Rob Stones. This book was also the winner of the Charles Cooley Award in 1983, awarded by the American Sociological Association and received an honorable mention for the C. Wright Mills Award.

The Case Against Homework Sara Bennett 2007-08-28 Does assigning fifty math problems accomplish any more than assigning five? Is memorizing word lists the best way to increase vocabulary—especially when it takes away from reading time? And what is the real purpose behind those devilish dioramas? The time our children spend doing homework has skyrocketed in recent years. Parents spend countless hours cajoling their kids to complete such assignments—often without considering whether or not they serve any worthwhile purpose. Even many teachers are in the dark: Only one of the hundreds the authors interviewed and surveyed had ever taken a course specifically on homework during training. The truth, according to Sara Bennett and Nancy Kalish, is that there is almost no evidence that homework helps elementary school students achieve academic success and little evidence that it helps older students. Yet the nightly burden is taking a serious toll on America's families. It robs children of the sleep, play, and exercise time they need for proper physical, emotional, and neurological development. And it is a hidden cause of the childhood obesity epidemic, creating a nation of

“homework potatoes.” In *The Case Against Homework*, Bennett and Kalish draw on academic research, interviews with educators, parents, and kids, and their own experience as parents and successful homework reformers to offer detailed advice to frustrated parents. You’ll find out which assignments advance learning and which are time-wasters, how to set priorities when your child comes home with an overstuffed backpack, how to talk and write to teachers and school administrators in persuasive, nonconfrontational ways, and how to rally other parents to help restore balance in your children’s lives. Empowering, practical, and rigorously researched, *The Case Against Homework* shows how too much work is having a negative effect on our children’s achievement and development and gives us the tools and tactics we need to advocate for change. Affix Ordering Across Languages and Frameworks Stela Manova 2015 This volume advances our understanding of how word structure in terms of affix ordering is organized in the languages of the world. Affix ordering is a central issue in linguistic theory and there has been much research on the topic. The present volume contributes novel data from typologically diverse well-studied and lesser-studied languages as well as original analyses, and covers the major approaches in the field. Unlike previous research, most of the contributions in this collection consider more than one language.

Warlike and Peaceful Societies Agner Fog 2017-10-13 Are humans violent or peaceful by nature? We are both. In this ambitious and wide-ranging book, Agner Fog presents a groundbreaking new argument that explains the existence of differently organised societies using evolutionary theory. It combines natural sciences and social sciences in a way that is rarely seen.

According to a concept called regality theory, people show a preference for authoritarianism and strong leadership in times of war or collective danger, but desire egalitarian political systems in times of peace and safety. These individual impulses shape the way societies develop and organise themselves, and in this book Agner argues that there is an evolutionary mechanism behind this flexible psychology. Incorporating a wide range of ideas including evolutionary theory, game theory, and ecological theory, Agner analyses the conditions that make us either strident or docile. He tests this theory on data from contemporary and ancient societies, and provides a detailed explanation of the applications of regality theory to issues of war and peace, the rise and fall of empires, the mass media, economic instability, ecological crisis, and much more. *Warlike and Peaceful Societies: The Interaction of Genes and Culture* draws on many different fields of both the social sciences and the natural sciences. It will be of interest to academics and students in these fields, including anthropology, political science, history, conflict and peace research, social psychology, and more, as well as the natural sciences, including human biology, human evolution, and ecology.
