Design for Mental and Behavioral Health

Mardelle McCuskey Shepley 2017-05-18 Studies confirm that the physical environment influences health outcomes, emotional state, preference, satisfaction and orientation, but very little research has focused on mental and behavioural health settings. This book summarizes design principles and design research for individuals who are intending to design new mental and behavioural health facilities and those wishing to evaluate the quality of their existing facilities. The authors discuss mental and behavioural health systems, design guidelines, design research and existing standards, and provide examples of best practice. As behavioural and mental health populations vary in their needs, the primary focus is limited to environments that support acute care, outpatient and emergency care, residential care, veterans, pediatric patients, and the treatment of chemical dependency.

The Social Determinants of Mental Health

Michael T. Compton 2015-04-01 The Social Determinants of Mental Health aims to fill the gap that exists in the psychiatric, scholarly, and policy-related literature on the social determinants of mental health: those factors stemming from where we learn, play, live, work, and age that impact our overall mental health and well-being. The editors and an impressive

roster of chapter authors from diverse scholarly backgrounds provide detailed information on topics such as discrimination and social exclusion; adverse early life experiences; poor education; unemployment, underemployment, and job insecurity; income inequality, poverty, and neighborhood deprivation; food insecurity; poor housing quality and housing instability; adverse features of the built environment; and poor access to mental health care. This thought-provoking book offers many beneficial features for clinicians and public health professionals: Clinical vignettes are included, designed to make the content accessible to readers who are primarily clinicians and also to demonstrate the practical, individual-level applicability of the subject matter for those who typically work at the public health, population, and/or policy level. Policy implications are discussed throughout, designed to make the content accessible to readers who work primarily at the public health or population level and also to demonstrate the policy relevance of the subject matter for those who typically work at the clinical level. All chapters include five to six key points that focus on the most important content, helping to both prepare the reader with a brief overview of the chapter's main points and reinforce the "take-away" messages afterward. In addition to the main body of the book, which focuses on selected individual social determinants of mental health, the volume includes an in-depth overview that summarizes the editors' and their colleagues' conceptualization, as well as a final chapter coauthored by Dr. David Satcher, 16th Surgeon General of the United States, that

serves as a "Call to Action," offering specific actions that can be taken by both clinicians and policymakers to address the social determinants of mental health. The editors have succeeded in the difficult task of balancing the individual/clinical/patient perspective and the population/public health/community point of view, while underscoring the need for both groups to work in a unified way to address the inequities in twenty-first century America. The *Social Determinants of Mental Health* gives readers the tools to understand and act to improve mental health and reduce risk for mental illnesses for individuals and communities. Students preparing for the Medical College Admission Test (MCAT) will also benefit from this book, as the MCAT in 2015 will test applicants' knowledge of social determinants of health. The social determinants of mental health are not distinct from the social determinants of physical health, although they deserve special emphasis given the prevalence and burden of poor mental health.

Beyond Clinical Dehumanisation towards the Other in Community Mental Health Care

Catherine A. Racine 2021-03-31 *Beyond Clinical Dehumanisation Toward the Other in Community Mental Health Care* offers a rare and intimate portrayal of the moral process of a mental health clinician that interrogates the intractable problem of systemic dehumanisation in community mental health care and looks to the notion of "wonder" and the visionary relational ethics of Emmanuel Levinas for a possible cure. An interdisciplinary study with transdisciplinary aspirations, this book contributes an original and compelling voice to the emerging therapeutic conversation attempting to re-imagine and transcend the objectifying constraints of the dominant discourse and the reductive world view that drives it. Chapters bring into dialogue the fields of community mental health care, psychology, psychology and the Other, the philosophy of wonder, Levinasian ethics, clinical ethics, the moral research of autoethnography and the medical humanities, to consider the defilement of the vulnerable help seeker, the moral injury of the clinician and look for answers beyond. This book is an ethical primer for mental health professionals, researchers, educators, advocates

and service users working to re-imagine and heal a broken system by challenging the underpinnings of entrenched dehumanisation and standing with those they "serve".

Psychologies of Ageing Elizabeth Peel

2018-10-09 This book brings together a diversity of perspectives on the psychology of ageing. Exploring theoretical, conceptual, empirical and practical viewpoints on the topic, the authors offer insight into a range of contemporary issues. Dedicated chapters discuss themes within social and critical psychology such as ageing identities, sexuality and empathy in palliative care. The second part of the book analyses cognitive and biological aspects of ageing, including stress and health in ageing, dementia and lifestyle, and resilience in frailty in old age. The authors conclude by offering perspectives on community and political psychology, examining home and community supports for older people. Written in an accessible style suitable for students as well as researchers in psychology and the social sciences interested in ageing, this book showcases key theoretical, empirical, and practical issues in later life.

Global Health Care: Issues and Policies Carol Holtz

2016-05-20 *Global Health Care: Issues and Policies*, Third Edition provides students with current information on various global health topics. Written by academic authors, scientists and health practitioners, the text prepares students with a basic perspective of health policy issues from various geographical regions, and explains how they are affected by significant world events. The text addresses international health and healthcare at both the undergraduate and graduate levels. New to the Third Edition Updated content reflecting trends and issues New content on sex trafficking, social work and social determinants of health Contributed content by national recognized experts

Expanding Perspectives on Human Rights in Africa M. Raymond Izarali

2019-03-14 This book draws attention to emerging issues around the rights of minorities, marginalized groups, and persons in Africa. It explores the gaps between human rights provisions and conditions, showing that although international human rights principles have been embraced in the continent, various minority groups and marginalized

persons are denied such rights through criminalization and persecution. African countries have a good record of signing and ratifying international and regional rights instruments but the political will and capacity for enforcing these with respect to minorities remain weak. International contributors to the book provide new perspectives on the rights of marginalized and minority groups in different parts of Africa and the extent to which they are deprived or denied entitlement to the universality and equality articulated in law. The authors show that human rights, while having come of age as a moral ideal, has not been fully entrenched in practice towards groups such as children, indigenous populations, the mentally ill, persons with disabilities, and persons with albinism. This volume is geared toward scholars, students, human rights groups, policy makers, social workers, international organizations, and policy makers in the fields of criminology, security studies, development studies, political science, sociology, children studies, social psychology, international relations, postcolonial studies, and African Studies.

Families, Social Services, and Social Policy

Robert Moroney 1980

The Future of the Public's Health in the 21st Century Institute of Medicine 2003-02-01 The anthrax incidents following the 9/11 terrorist attacks put the spotlight on the nation's public health agencies, placing it under an unprecedented scrutiny that added new dimensions to the complex issues considered in this report. The Future of the Public's Health in the 21st Century reaffirms the vision of Healthy People 2010, and outlines a systems approach to assuring the nation's health in practice, research, and policy. This approach focuses on joining the unique resources and perspectives of diverse sectors and entities and challenges these groups to work in a concerted, strategic way to promote and protect the public's health. Focusing on diverse partnerships as the framework for public health, the book discusses: The need for a shift from an individual to a population-based approach in practice, research, policy, and community engagement. The status of the governmental public health infrastructure and what needs to be improved, including its interface with the health care delivery system.

The roles nongovernment actors, such as academia, business, local communities and the media can play in creating a healthy nation. Providing an accessible analysis, this book will be important to public health policy-makers and practitioners, business and community leaders, health advocates, educators and journalists. Shared Responsibility Robert Moroney 2016 One of the fundamental issues confronting those who create, analyze, or work within the framework of modern American social welfare policy is the relationship of the family and the state in the delivery of social care through social services. Dr. Moroney develops the idea of the family as both recipient and dispenser of social services. Simply and effectively he "paints the landscape" with respect to American families. He focuses on two special cases: families with frail elderly and families with severely mentally handicapped children. The notion of shared responsibility between the family and state, the nature of social welfare response through government programs and the professional response of social workers to families in need, and some of the dilemmas inherent in formulating family policy in a multicultural, pluralistic society are examined.

Sociocultural Roots of Mental Illness J. Schwab 2013-03-09 For the past decade and more, American psychiatry has been at sea on the adventurous if uncontrolled odyssey of community psychiatry. The voyage has often coursed through uncharted oceans, and for many the purpose and destination of the journey have been obscure. Even among those whose sights are clearer, there is growing concern that the ship will be becalmed by inadequate funding or run aground on the shoals of bureaucratic anarchy. For all of these voyagers this volume should come as a welcome compass. The authors' review of their subject is encyclopedic. They have not only traced the origins of modern concepts and studies back to their historical roots, but have drawn their material widely from the work of investigators throughout the world to illustrate current trends and problems. The novice will find their discussion of epidemiology a clearly written and useful introduction to one of the scientific foundations of social psychiatry, and novice and expert alike can profit from their thoughtful and critical assessment of basic terms

and concepts, including illuminating chapters on stress, genetics, psychophysiological disorders, and cultural psychiatry. The volume ends on a personal note as the authors present their views of the current state of social psychiatry and suggest ways in which its theoretical structure might be strengthened. Too often the plight of the individual is overlooked in the concern with impersonal numbers and surveys that preoccupy epidemiologists and social scientists.

Encyclopedia of Mental Health 2015-08-26
Encyclopedia of Mental Health, Second Edition, tackles the subject of mental health, arguably one of the biggest issues facing modern society. The book presents a comprehensive overview of the many genetic, neurological, social, and psychological factors that affect mental health, also describing the impact of mental health on the individual and society, and illustrating the factors that aid positive mental health. The book contains 245 peer-reviewed articles written by more than 250 expert authors and provides essential material on assessment, theories of personality, specific disorders, therapies, forensic issues, ethics, and cross-cultural and sociological aspects. Both professionals and libraries will find this timely work indispensable. Provides fully up-to-date descriptions of the neurological, social, genetic, and psychological factors that affect the individual and society
Contains more than 240 articles written by domain experts in the field
Written in an accessible style using terms that an educated layperson can understand
Of interest to public as well as research libraries with coverage of many important topics, including marital health, divorce, couples therapy, fathers, child custody, day care and day care providers, extended families, and family therapy

Ending Discrimination Against People with Mental and Substance Use Disorders

National Academies of Sciences, Engineering, and Medicine 2016-09-03
Estimates indicate that as many as 1 in 4 Americans will experience a mental health problem or will misuse alcohol or drugs in their lifetimes. These disorders are among the most highly stigmatized health conditions in the United States, and they remain barriers to full participation in society in areas as basic as education, housing, and employment. Improving the lives of people with mental health

and substance abuse disorders has been a priority in the United States for more than 50 years. The Community Mental Health Act of 1963 is considered a major turning point in America's efforts to improve behavioral healthcare. It ushered in an era of optimism and hope and laid the groundwork for the consumer movement and new models of recovery. The consumer movement gave voice to people with mental and substance use disorders and brought their perspectives and experience into national discussions about mental health. However over the same 50-year period, positive change in American public attitudes and beliefs about mental and substance use disorders has lagged behind these advances. Stigma is a complex social phenomenon based on a relationship between an attribute and a stereotype that assigns undesirable labels, qualities, and behaviors to a person with that attribute. Labeled individuals are then socially devalued, which leads to inequality and discrimination. This report contributes to national efforts to understand and change attitudes, beliefs and behaviors that can lead to stigma and discrimination. Changing stigma in a lasting way will require coordinated efforts, which are based on the best possible evidence, supported at the national level with multiyear funding, and planned and implemented by an effective coalition of representative stakeholders. Ending Discrimination Against People with Mental and Substance Use Disorders: The Evidence for Stigma Change explores stigma and discrimination faced by individuals with mental or substance use disorders and recommends effective strategies for reducing stigma and encouraging people to seek treatment and other supportive services. It offers a set of conclusions and recommendations about successful stigma change strategies and the research needed to inform and evaluate these efforts in the United States.

A Bibliography of British History, 1914-1989

Keith Robbins 1996
Containing over 25,000 entries, this unique volume will be absolutely indispensable for all those with an interest in Britain in the twentieth century. Accessibly arranged by theme, with helpful introductions to each chapter, a huge range of topics is covered. There is a

comprehensiveindex.

Mental Health and Social Change Fortune

Vincent Mannino 1975

The Future of Public Health Institute of Medicine 1988-02-01 "The Nation has lost sight of its public health goals and has allowed the system of public health to fall into 'disarray'," from *The Future of Public Health*. This startling book contains proposals for ensuring that public health service programs are efficient and effective enough to deal not only with the topics of today, but also with those of tomorrow. In addition, the authors make recommendations for core functions in public health assessment, policy development, and service assurances, and identify the level of government—"federal, state, and local"—at which these functions would best be handled.

Social Isolation and Loneliness in Older

Adults National Academies of Sciences, Engineering, and Medicine 2020-05-14 Social isolation and loneliness are serious yet underappreciated public health risks that affect a significant portion of the older adult population. Approximately one-quarter of community-dwelling Americans aged 65 and older are considered to be socially isolated, and a significant proportion of adults in the United States report feeling lonely. People who are 50 years of age or older are more likely to experience many of the risk factors that can cause or exacerbate social isolation or loneliness, such as living alone, the loss of family or friends, chronic illness, and sensory impairments. Over a life course, social isolation and loneliness may be episodic or chronic, depending upon an individual's circumstances and perceptions. A substantial body of evidence demonstrates that social isolation presents a major risk for premature mortality, comparable to other risk factors such as high blood pressure, smoking, or obesity. As older adults are particularly high-volume and high-frequency users of the health care system, there is an opportunity for health care professionals to identify, prevent, and mitigate the adverse health impacts of social isolation and loneliness in older adults. *Social Isolation and Loneliness in Older Adults* summarizes the evidence base and explores how social isolation and loneliness affect health and quality of life in adults aged 50

and older, particularly among low income, underserved, and vulnerable populations. This report makes recommendations specifically for clinical settings of health care to identify those who suffer the resultant negative health impacts of social isolation and loneliness and target interventions to improve their social conditions. *Social Isolation and Loneliness in Older Adults* considers clinical tools and methodologies, better education and training for the health care workforce, and dissemination and implementation that will be important for translating research into practice, especially as the evidence base for effective interventions continues to flourish.

Clinical Case Formulations Barbara Lichner Ingram 2011-12-13 Praise for *Clinical Case Formulations Matching the Integrative Treatment Plan to the Client, Second Edition* "[Barbara Ingram has put] a career into the development of this book and it is wonderful! My students love that it was written with them in mind and they love the statements designed to reduce anxiety and normalize the learning process. This is an excellent book!"—Amy M. Rees-Turyn, PhD Associate Professor of Counseling Psychology, Lewis & Clark College A step-by-step model for individualized case conceptualization Fully revised and updated, the second edition of *Clinical Case Formulations* provides step-by-step tools and insightful guidance for moving from first contact with a client to the development of an effective, personalized treatment plan. Addressing the essential question every therapist faces—How do I create a treatment plan that is the best match

for my client?—this unique resource provides a systematic and thoughtful method for integrating ideas, skills, and techniques from different theoretical approaches. It combines empirical research and clinical experience to create a case formulation that is tailor-made for the client. This comprehensive resource offers two tools to guide case formulations: a problem-oriented framework, with a list of 28 standards for evaluating its application, and a set of 30 core clinical hypotheses derived from the knowledge bases of psychology, psychiatry, counseling, and social work professions. The new edition includes: Hypotheses on Emotional Focus, Trauma, and Metacognitive Perspective More detailed attention given to empirically supported therapies such as Dialectical Behavior Therapy (DBT) and Acceptance and Commitment Therapy (ACT) Discussion on the importance of bringing cultural competence to case formulation tasks with every client Skill-building activities throughout the text Offering a thorough framework to help clients experience effective clinical service, practitioners will learn to conceptualize clients' needs in ways that lead to strong and individualized treatment plans, as well as advice and guidance on what to do when selected interventions fail to produce the expected benefits.

Community Psychology and Community Mental Health Geoffrey Nelson 2014-08-13 Mental health practices and programs around the world face growing criticism from policymakers, consumers, and service providers for being ineffective, overly reliant on treatment by professionals, and overly focused on symptoms. Many have called for new paradigms of mental health and new practices that can better support recovery, community integration, and adaptive functioning for persons diagnosed with psychiatric disabilities. While there has recently been much discourse about transformation and recovery, there has yet to be a critical and systematic review that unpacks the concept of mental health systems transformation or that examines strategies for how to create transformative change in mental health. Community Psychology and Community Mental Health provides empirical justification and a conceptual foundation for transformative change in mental health, based on community

psychology values and principles of ecology, collaboration, empowerment, and social justice. Chapters provide strategies for making changes at the level of society, policy, organizations, community settings, and mental health practices. The editors and authors draw from experience in different countries in recognition of the need to tailor change strategies to different contexts. The common experiences of the international perspectives represented underscore the importance and the need for a new paradigm while demonstrating that there are many alternatives and opportunities for pursuing transformative change. This book will be of interest to community mental health professionals, researchers, and students, as well as policymakers, administrators, and those with lived experience of mental health issues.

Handbook of Mental Health Consultation 1986

Handbook for Human Sexuality Counseling Angela M. Schubert 2022-09-20 This award-winning text translates the theoretical foundations of solution-focused counseling into a brief, culturally responsive approach for school counselors, psychologists, social workers, and graduate students. As an experienced practitioner and international presenter on this topic, Dr. Murphy has organized the fourth edition to reflect content offered in a comprehensive workshop on solution-focused counseling to further enhance its usefulness and presents a straightforward process for building practical solutions to some of the most challenging cases experienced in school settings. Text features include a variety of real-life examples and dialogues with preschool-12 students, experiential activities and practice exercises, and appendixes with tools and templates for putting solution-focused counseling into immediate action. Chapters new to this edition cover developmental considerations and creative adaptations for working with children and adolescents, methods to explore progress in solution-focused work, and frequently asked questions. A complimentary test manual and PowerPoint slides for instructors are available by request. Requests for digital versions from ACA can be found on www.wiley.com To purchase print copies, please visit the ACA website here

Mental Health and Social Change George V. Coelho 1972

Bibliography of the History of Medicine 1979

Community Mental Health Teams Tom Burns 2004-04 Provides practical advice for those working within community mental health teams, addressing the needs of individual specialists and providing clinical advice based on proven methods.

Handbook of Public Protection Mike Nash 2010-09-27 Public protection has become an increasingly central theme in the work of the criminal justice agencies in many parts of the world in recent years. Its high public profile and consequent political sensitivity means that growing numbers of criminal justice professionals find their daily work load dominated by the assessment and management of high risk of harm offenders. Developments such as sex offender registers and (in the UK) Multi Agency Public Protection Arrangements (Mappa) have made this issue not only a core activity for police, probation and prison services, but to a range of other organizations as well, in particular social work and the health services. Partnership has become central to the concept of public protection. At the same time the concept of public protection has occasioned increased political debate. Protecting the public from high risk or dangerous offenders has become an international issue and has increasingly shaped criminal justice policy. This text brings together leading authorities in the field, providing authoritative coverage of the theory and practice of public protection, both in the UK and internationally. It provides a critical review of contemporary public protection practice as well as up-to-date research and thinking in the field.

Cities and Social Change Ronan Paddison 2014-06-17 "This textbook of essays by leading critical urbanists is a compelling introduction to an important field of study; it interrogates contemporary conflicts and contradictions inherent in the social experience of living in cities that are undergoing neoliberal restructuring, and grapples with profound

questions and challenging policy considerations about diversity, equity, and justice. A stimulant to debate in any undergraduate urban studies classroom, this book will inspire a new generation of urban social scholars." - Alison Bain, York University "Stages a lively encounter with different understandings of urban production and experience, and does so by bringing together an exciting group of scholars working across a diversity of theoretical and geographical contexts. The book focuses on some of the central conceptual and political challenges of contemporary cities, including inequality and poverty, justice and democracy, and everyday life and urban imaginaries, providing a critical platform through which to ask how we might work towards alternative forms of urban living." - Colin McFarlane Durham University What is the city? What is the nature of living in the city? This new textbook provides students with an in-depth understanding of the central issues associated with the city and how living in a city impacts its inhabitants. Theoretically informed and thematically rich, the book is edited by leading scholars in the field and contains an eminent, international cast of contributors and contributions. It provides a critical analysis of the key thinkers, themes and paradigms dealing with the relationship between the built environment and urban life. It includes illustrative case studies, questions for discussion, further reading and web links. Examining the contradictions, conflicts and complexities of city living, the book is an essential resource for students looking to get to grip with the different theoretical and substantive approaches that make up the diverse and rich study of the city and urban life.

Social Change and Human Behavior National Institute of Mental Health (U.S.) 1972

Within Our Reach Rosalynn Carter 2010-04-27 In *Within Our Reach*, Rosalynn Carter and coauthors Susan K. Golant and Kathryn E. Cade render an insightful, unsparing assessment of the state of mental health. Mrs. Carter has been deeply invested in this issue since her husband, former President Jimmy Carter, campaigned for governor of Georgia, when she saw firsthand the horrific, dehumanizing treatment of people with mental illnesses. Using stories from her 35 years

of advocacy to springboard into a discussion of the larger issues at hand, Carter crafts an intimate and powerful account of a subject previously shrouded in stigma and shadow, surveying the dimensions of an issue that has affected us all. She describes a system that continues to fail those in need, even though recent scientific breakthroughs with mental illness have potential to help most people lead more normal lives. Within *Our Reach* is a seminal, searing, and ultimately optimistic look at how far we've come since Jimmy Carter's days on the campaign trail and how far we have yet to go.

Children Today 1977

Communities in Action National Academies of Sciences, Engineering, and Medicine 2017-04-27

In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. *Communities in Action: Pathways to Health Equity* seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

Psychiatry Sidney Bloch 2014-05-01 *Psychiatry: Past, Present, and Prospect* brings together perspectives from a group of highly respected psychiatrists, each with decades of experience in clinical practice. The topics covered range from scientific discoveries of all kinds, advances in

treatment, and conceptual breakthroughs. The highlights are countered by the field's negative sides: perennial indecisiveness about the boundaries of psychiatry; the limitations of a narrow approach to human suffering; the retreat from the hope of a de-institutionalised, community-based psychiatry; the divide between biological treatments and psychotherapy; the technical and ethical complexities of psychiatric research; and the low priority given to psychiatry, especially but far from exclusively in less developed countries. The result is a text full of collected wisdom which will promote the curiosity of mental health professionals about key developments in psychiatry over the past half century; sensitize the next generation of mental health professionals to the role they might play in advancing the state of knowledge about mental illness and its treatment during the course of their careers; and serve as a valuable archival resource for scholars. This collection of viewpoints from very experienced leaders in the field of psychiatry will prove fascinating reading for psychiatrists and allied mental health professionals, such as psychologists, psychiatric social workers, psychiatric nurses and occupational therapists, both trained and in training. It will also offer the interested laity a balanced account of psychiatry's evolution since the 1950s, and its likely prospects in the 21st century.

30 Years of Social Change Stephen Jones 2017-10-19 What social change has been achieved over the past 30 years? What have been the main barriers to progress? What great achievements can we identify and celebrate today? Marking Jessica Kingsley Publishers' 30th year of publishing books on social and behavioural issues, this book gathers together over 30 leading thinkers from diverse disciplines - from autism specialists and social workers through to trans rights activists and complementary therapists. Contributors provide a thoughtful account of how their field of expertise has changed over the past 30 years, and how they see it evolving in the future. Offering a unique insight into many professions, *30 Years of Social Change* highlights much of the positive social change achieved in the past 30 years across these fields and the challenges we face in the future.
