The Mental Health and Substance Use Workforce for Older Adults Institute of Medicine 2012-10-26

At least 5.6 million to 8 million-nearly one in five-older adults in America have one or more mental

health and substance use conditions, which present unique challenges for their care. With the number of adults age 65 and older projected to soar from 40.3 million in 2010 to 72.1 million by 2030, the aging of America holds profound consequences for the nation. For decades, policymakers have been warned that the nation's health care workforce is ill-equipped to care for a rapidly growing and increasingly diverse population. In the specific disciplines of mental health and substance use, there have been similar warnings about serious workforce shortages, insufficient workforce diversity, and

lack of basic competence and core knowledge in key areas. Following its 2008 report highlighting the urgency of expanding and strengthening the geriatric health care workforce, the IOM was asked by the Department of Health and Human Services to undertake a complementary study on the geriatric mental health and substance use workforce. The Mental Health and Substance Use Workforce for Older Adults: In Whose Hands? assesses the needs of this population and the workforce that serves it. The breadth and magnitude of inadequate workforce training and personnel shortages have grown to such

proportions, says the committee, that no single approach, nor a few isolated changes in disparate federal agencies or programs, can adequately address the issue. Overcoming these challenges will require focused and coordinated action by all. Dementia in Nursing Homes Sandra Schüssler 2017-05-19 Written by leading international experts, this book discusses the latest advances in the field of dementia in nursing homes. The topics and findings covered are based on their survey and on a scientific literature review. Dementia is spreading worldwide, placing a growing burden on healthcare systems and

caregivers, as well as those affected. With increasing and complex care needs, nursing home admission is often necessary. Globally, over half of nursing home residents suffer from dementia. The book provides essential information on the most important issues in dementia in nursing homes today, including meaningful activities, patient-/person-centered care, psychosocial interventions, challenging behavior, inclusion and support of family members, pain, staff training and education, communication, polypharmacy, quality of life, end-of-life care and advanced care planning,

depression, delirium, multidisciplinary approaches, physical restraints and care dependency. Each topic is covered by an international expert in dementia. As such, the book will appeal to professional nurses, nursing scientists, nursing students, other healthcare professionals, and to a broad readership, and will provide a valuable resource for those working in nursing homes, as well as researchers in the field.

Ethics, Law, and Aging Review, Volume 11

Marshall B. Kapp, JD, MPH, FCLM 2005-09-01

We are now engaged in a movement that de-emphasizes the reliance on institutional forms of long-term care for disabled persons needing ongoing daily living assistance and converges on the use of non-institutional service providers and residential settings. In this latest edition of *Ethics, Law and Aging Review*, Kapp and ten expert contributors help us examine the forces and potential for changing the long-term care industry (both positively and negatively) and address this paradigm shift from the impersonal, public psychiatric institutions of the 1960s and 1970s to the present-day assisted living

environments that have been fueled by economic, social, political, and legal forces. Most importantly, this volume identifies obstacles to change and enlighten service providers, advocates, and key policy makers to the pitfalls that can largely interfere with positive outcomes as a result of long-term care deinstitutionalization. Topics explored include: Community-based alternatives for older adults with serious mental illness Failing consumer-directed alternatives to nursing homes Ethics of Medicare privatization Patient Safety and Quality 2008 "Nurses play a vital role in improving the safety and quality of

patient care -- not only in the hospital or ambulatory treatment facility, but also of community-based care and the care performed by family members. Nurses need know what proven techniques and interventions they can use to enhance patient outcomes. To address this need, the Agency for Healthcare Research and Quality (AHRQ), with additional funding from the Robert Wood Johnson Foundation, has prepared this comprehensive, 1,400-page, handbook for nurses on patient safety and quality -- Patient Safety and Quality: An Evidence-Based Handbook for Nurses. (AHRQ Publication No. 08-0043)."--

Manual of Nursing Home Practice for Psychiatrists American Psychiatric Association
2008-11-01 The shifting demographic toward a "graying" population -- coupled with today's reality of managed care -- makes the need for high-quality, cost-effective psychiatric services within the nursing care setting more urgent than ever.
As we increase the number of our years, it is also

imperative that we enhance the quality of those years. The product of the American Psychiatric Association's (APA's) Council on Aging and its Committee on Long-Term Care and of the Elderly, the Manual of Nursing Home Practice for Psychiatrists stands out because it focuses on the "how" -- not the "why" -- of nursing home care. Of exceptional importance is its detailed discussion of the Minimum Data Set (MDS), a structured assessment required by both Medicare and Medicaid for all residents of skilled nursing facilities. Divided into six sections, this "how to" volume contains practical information readers can

use right away, from getting reimbursed by insurance companies to handling nursing facility politics: Clinical -- History; evaluation and management of psychiatric problems in long-term care patients; an overview of the MDS; sexuality within the nursing home care setting Regulatory -- Introduction to the Nursing Home Reform Act of 1987 (part of OBRA-87) and its implications for psychiatric care; details about the Resident Assessment Instrument (RAI), which includes the MDS, the Resident Assessment Protocols (RAPs), and Utilization Guides specified in the State Operations Manual (SOP) Financial --

Documentation, reimbursement, and coding; what to look for when contracting with nursing homes Legal and ethical -- The dehumanizing effect of diagnostic labels and the ethical issues inherent in regulating daily schedules (e.g., bed, meal, and bath times); nursing home placement; competence and decision-making ability; comfort care for end-stage dementia; coping with Alzheimer's disease; and the role of caregivers Summary and Future Perspectives -- A detailed vision about how psychiatrists can improve the diagnosis and treatment of nursing home patients Appendixes and bibliography -- Staffing

recommendations and assessment instruments
Edited by a distinguished authority and former
chair of the APA's Committee on Long-Term Care
and Treatment of the Elderly, this comprehensive
volume will appeal to a wide audience of
professionals: from general psychiatrists, nurse
practitioners, and clinical nurse specialists, to
primary care physicians and residents.

Nursing Home Reform and the Mentally Ill 1990
Maltreatment of Patients in Nursing Homes Diana Harris 2012-10-12 “Abuse, although often not detected or reported, existed in every facility we surveyed. It is a serious problem.” Old, weak,

and often cognitively impaired, nursing home patients can be easy targets for physical, psychological, material, and financial mistreatment at the hands of those entrusted with their care, safety, and well-being. Maltreatment of Patients in Nursing Homes: There Is No Safe Place examines the dark side of nursing homes, where not every employee has the commitment of Mother Theresa. This groundbreaking book applies criminological theory to help develop practical methods of controlling abuse and presents the results of the first and only nationwide study on the theft of patients’

belongings, a form of abuse too often ignored by the nursing home industry. Maltreatment of Patients in Nursing Homes surveys employees, administrators, and family members of patients in 47 nursing homes throughout the United States. Their responses provide invaluable insights on a wide range of topics, including the social and psychological factors that cause different types of abuse, characteristics of nursing home patients and employees, the bureaucracy of nursing homes, victimization rates, workforce issues of nursing home aides, and federal regulations for nursing homes. The information gained from the

surveys forms the basis for detailed recommendations for creating a safer environment and reducing all forms of abuse, including theft-prevention training programs, background checks and improved screening of potential employees, education and advocacy for current staff, and the reform of federal regulations. Maltreatment of Patients in Nursing Homes examines: types of physical abuse (restraints, sexual abuse, neglect) the who, what, and why of nursing home theft types of financial abuse (trust accounts, bank accounts, improper charges for services and drugs, identity theft)

types of psychological abuse (abandonment, segregation, childlike treatment, verbal abuse)
effects of psychological abuse (depression, learned helplessness, psychiatric disorders)
reasons for abuse by employees (staff turnover, job burnout, job dissatisfaction, caregiver stress)
One of the few books to deal with abuse of the elderly outside a domestic setting, *Maltreatment of Patients in Nursing Homes: There Is No Safe Place* interprets and analyzes abuse to provide new ways of thinking about this growing problem and new methods of preventing it from growing any more widespread.

For-Profit Enterprise in Health Care Institute of Medicine 1986-01-01 "[This book is] the most authoritative assessment of the advantages and disadvantages of recent trends toward the commercialization of health care," says Robert Pear of The New York Times. This major study by the Institute of Medicine examines virtually all aspects of for-profit health care in the United States, including the quality and availability of

health care, the cost of medical care, access to financial capital, implications for education and research, and the fiduciary role of the physician. In addition to the report, the book contains 15 papers by experts in the field of for-profit health care covering a broad range of topicsâ"from trends in the growth of major investor-owned hospital companies to the ethical issues in for-profit health care. "The report makes a lasting contribution to the health policy literature." â"Journal of Health Politics, Policy and Law. **Retooling for an Aging America** Institute of Medicine 2008-08-27 As the first of the nation's

78 million baby boomers begin reaching age 65 in 2011, they will face a health care workforce that is too small and woefully unprepared to meet their specific health needs. Retooling for an Aging America calls for bold initiatives starting immediately to train all health care providers in the basics of geriatric care and to prepare family members and other informal caregivers, who currently receive little or no training in how to tend to their aging loved ones. The book also recommends that Medicare, Medicaid, and other health plans pay higher rates to boost recruitment and retention of geriatric specialists and care

aides. Educators and health professional groups can use Retooling for an Aging America to institute or increase formal education and training in geriatrics. Consumer groups can use the book to advocate for improving the care for older adults. Health care professional and occupational groups can use it to improve the quality of health care jobs.

Mental Health Consultation in Nursing Homes

Michael A. Smyer 1990-12 "The most complete book to date concerning the institutionalized care of the mentally ill elderly. A compassionate, comprehensive portrayal of the problems of caring for older persons by family members and

nursing home staff. Essential reading for all those working with the elderly." --Bertram J. Cohler, Committee on Human Development, University of Chicago "The real strength of this book lies in its initial conceptualization of the nursing home as a community with a community's complexity of forces working both for and counter to the best interests of its members...contrasting the traditional view that the institution is the enemy of its residents." --M. Powell Lawton, Director of Research, Philadelphia Geriatric Center "This eminently readable book meets a long-standing need in the field of mental health, reflected in the

fact that many nursing home residents suffer mental and emotional problems not infrequently the cause of their placement. Rooted solidly in theory, research, and clinical evidence, yet with a clear eye to practical applications, this excellent book will appeal to scholars, educators, students, administrators, consultants, and practitioners." -- Barbara Silverstone, Executive Director, The Lighthouse "This book come out at the right time in our return to a national discussion of the mental health needs of older adults. Scholarly in breadth and thoroughness, the authors draw on their wealth of practical experience to edify topics

on the nursing home industry and its community of caregivers, families, and residents, and on strategies for mental health consultation, assessment, and intervention. It is thoughtfully written." --Carrell Wendland, Ph.D., President Beverly Foundation

Principles of Inpatient Psychiatry Fred Ovsiew
2008-11-01 Principles of Inpatient Psychiatry is geared to psychiatrists working in inpatient settings: residents, psychiatrists who occasionally provide inpatient care, and psychiatric "hospitalists" who specialize in the inpatient arena. Inpatient settings contain the sickest

psychiatric patients, such as those with a high risk of suicide, agitation requiring emergency management, or treatment-resistant psychosis and depression, all topics discussed in the book. Co-morbid general-medical illness is common, and the book focuses attention, supported by case examples, on medical and neuropsychiatric as well as general-psychiatric evaluation and management. Chapters address special clinical problems, including first-episode psychosis, substance abuse, eating disorders, and legal issues on the inpatient service. The editors bring expertise to bear on a wide range of treatments,

including psychopharmacologic, psychodynamic, and milieu approaches.
