Routledge Handbook of Global Mental Health Nursing Edilma Yearwood 2016-09-19 Awarded second place in the 2017 AJN Book of the Year Awards in Psychiatric and Mental Health Nursing. "I welcome, at long last, a book on global mental health targeted to nurses, the front-line health worker for billions of people around the world. The roles that nurses can, and should, play in mental health care are diverse and this book addresses both well-trod as well as emerging concerns across the continuum of care from promotion to prevention to treatment. Importantly, at the heart of this diversity is the foundation of compassion and care, the hallmark of the nursing profession." - Vikram Patel, Professor of International Mental Health and Wellcome Trust Principal Research Fellow in Clinical Science, Centre for Global Mental Health, London School of Hygiene and Tropical Medicine, UK Psychiatric disorders have consistently been identified as serious and significant global burdens of disease, yet meeting the needs of people in mental distress has not often been a priority in health care. This important reference work sets out the knowledge base for understanding the state of mental health care globally, and translating that into effective practice. The Handbook

provides a historical and contemporary context of mental health care, identifies and discusses evidence-based standards of care and strategies for mental health promotion and explores the need to deliver care from interdisciplinary and community-based models, placing these imperatives within a human rights and empowerment framework. It is made up of four core sections which look at: Key and emerging issues that affect global mental health practice and research, including the social context of health; Evidence-based health promotion strategies for major areas of practice internationally; A range of country studies, reflecting different problems and approaches to mental health and mental health care internationally; and What constitutes empowering practice. The only comprehensive work looking at global perspectives on mental health nursing, this is an invaluable reference for all students, academics and professionals involved in mental health research with an interest in global or cross-cultural issues.

The Future of Nursing Institute of Medicine 2011-02-08 The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number,

nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

Psychiatric and Mental Health Nursing Desmond Cormack 2013-11-11 Psychiatric and Mental Health Nursing: Theory and practice was conceived as a result of three major premises which, in the view of the editors, relate to the practice of psychiatric and mental health nursing. First, that high-quality psychiatric and mental health nursing can be practised only if it is underpinned by appropriate nursing theory. Secondly, that there exists a body of theory which can and should be applied to psychiatric and mental health nursing. Thirdly, that there is a need for a text which will assist teachers, students and clinicians to apply available nursing and borrowed theory to clinical practice. The general aim of this book is to introduce nursing students to a theory based approach to caring for people with psychiatric and mental health problems. The phrase psychiatric and mental health problems indicates that the text relates to clients with a psychiatric diagnosis, and also to those who have mental health problems but who do not necessarily have such a diagnosis. The client group to which the material in this text applies will include those who are, or have been, hospitalized and those in the community who have not been, and may never be, hospitalized. The intended readership is all students of psychiatric and mental health nursing issues, for example basic and post-basic nurses, and their teachers.
