The Genetics of Mental Retardation Stichting Bisschop Bekkers 1988-08-31 The Bishop Bekkers Foundation, devoted to the welfare of those with mental handicap and to the amelioration and prevention of this and related disabilities, is to be warmly congratulated for sponsoring and organizing the 1986 Inter national Workshop from which the present book is derived. With commendable foresight, the Foundation recognized that genetic aspects of mental handicap were a timely focus for the Workshop and that dramatic biomedical developments and prospects in this sphere have highly significant psychosocial and ethical ramifications. The papers of the 23 contributors in each of these areas, together with an introductory essay and discussion summaries, comprise this volume. Much of the subject matter is inevitably concerned with such sensitive issues as sanctity and quality of life and the - sometimes contrasting and even in conflict - rights and needs of the actually and potentially handicapped, their relatives and society in general. Such considerations, not surprisingly, engender different approaches and viewpoints. The papers in this book reflect this, with the editing attempting to achieve, as far as possible, a coherent and consistent format and not an identical outlook. The perceptions and views expressed in each paper are there fore those of the author concerned and not necessarily those of the editors or of the Bishop Bekkers Foundation.

Handbook of Psychiatry: Volume 2, Mental Disorders and Somatic Illness M. H. Lader 1983-08-31 This 1986 volume of the Handbook of Psychiatry covers that area of psychiatry contiguous with general medicine, and in particular neurology. It raises general issues especially

with respect to fundamental problems of the mind-body relationship, and deals with medical disorders related to psychiatry. The topics discussed include ischaemic heart disease, peptic ulcers, bronchial asthma, renal failure, endocrine disorders and ageing as well as neuropsychiatry. There is also an account of selected aspects of severe subnormality, concentrating on the practical management of the severely handicapped child and adult. Throughout this volume the contributors provide a clinically relevant account of their topics. The volume will continue to hold value as a comprehensive survey of the medical history of mental disorders associated with somatic illness.

Neurological, Psychiatric, and Developmental Disorders Institute of Medicine 2001-01-01 Brain disordersâ€”neurological, psychiatric, and developmentalâ€”now affect at least 250 million people in the developing world, and this number is expected to rise as life expectancy increases. Yet public and private health systems in developing countries have paid relatively little attention to brain disorders. The negative attitudes, prejudice, and stigma that often surround many of these disorders have contributed to this neglect. Lacking proper diagnosis and treatment, millions of individual lives are lost to disability and death. Such conditions exact both personal and economic costs on families, communities, and nations. The report describes the causes and risk factors associated with brain disorders. It focuses on six representative brain disorders that are prevalent in developing countries: developmental disabilities, epilepsy, schizophrenia, bipolar disorder, depression, and stroke. The report makes detailed recommendations of ways to reduce the toll exacted by these six disorders. In broader strokes, the report also proposes six major strategies toward reducing the overall burden of brain disorders in the developing world.

Exceptional Children Ronald L. Taylor 2012-12-06 Exceptional Children: Integrating Research and Teaching provides a com prehensive introduction to the constantly changing area of special educa tion. The book is research-based, and its title reflects our opinion regarding the important link between research and classroom practice. There is one feature of Exceptional Children: Integrating Research and Teaching that warrants attention and perhaps justification; it was written specifically to address the graduate student or sophisticated undergraduate student mar ket. As such, the book is written at a higher level and with a greater concept density than typical introductory special education texts. We feel that this type of book is very much needed and will be received favorably by the special education community. There are also several unique features of Exceptional Children: Integrat ing Research and Teaching that we feel will be quite valuable. First, we have emphasized the area of teaching practices and not simply included basic facts about definitions, characteristics, and causes. Although some intro ductory texts include information about teaching considerations, that area is not discussed as in depth as it is in our text. We feel that it is important that readers not only understand the educational needs of exceptional chil dren, but also can identify the best educational practices to meet those needs.
