Family Therapy Maurizio Andolfi 2012-12-06 Dr. Maurizio Andolfi, "Andi" to my dog and me, is one of the fourth generation family therapy theorists. This book, which he calls "interac tional," is probably one you would not enjoy. Maybe you could give it to a rival colleague on his birthday. Combining the teachings of Zwering and Laperriere with Ferber is confusing. Add to that a Horney analysis and stir with two ounces of Minuchin and a dram of Haley, and Andolfi becomes distracting to his friends and colleagues. His work with Can crini reacculturated him somewhat, but a Roman is a Roman, and, of course, he could not understand such problems as those we conquer in the United States. Assuming your rival is a well-trained, cause-and-effect thinker, you might find ways to watch him squirm. If he has not tried paradoxical methods, expect him to take a long vacation from work. If he is already a good family therapist, he may become a bit hypomanic, and his team may talk to you in private. Encourage them to suggest that he work harder and stop reading the book or, better still, donate it to the social work school library; they will read anything. If the team complains that the book advises teaching sick families how to be their own therapists, resist any impulse to check this out. No family could become self reparative when it is already dysfunctional. We know that professional help is the only hope.

Citizen Participation in Science Policy James C. Petersen 1984 The first book-length analysis of citizen participation in the formulation of scientific and technical policy. Twelve essays and case studies examine important examples of citizen activism, place them within the context of larger participatory movements, explore the variety of forms citizen participation may take, and consider new alternatives for public involvement. Special attention is given to public health policy and nuclear power development. Additional contributors are: Jayanta Bandyopadhyay, Barry Checkoway, Daryl Chubin, Diana Dutton, Rachelle Hollander, John P. Hunt, Neil H. Katz, Sheldon Krinsky, Jane Kronick, Dorothy Nelkin, Alan Porter, Frederick A. Rossini, Randy Rydell, and Vandana Shiva.

Past in the Making Michal Kopeček 2008-01-01 Historical revisionism, far from being restricted to small groups of 'negationists,' has galvanized debates in the realm of recent history. The studies in this book range from general accounts of the background of recent historical revisionism to focused analyses of particular debates or social-cultural phenomena in individual Central European countries, from Germany to Ukraine and Estonia. Where is the borderline between legitimate re-examination of historical interpretations and attempts to rewrite history in a politically motivated way that downgrades or denies essential historical facts? How do the traditional 'national historical narratives' react to the 'spill-over' of international and political controversies into their 'sphere of influence'? Technological progress, along with the overall social and cultural decentralization shatters the old hierarchies of academic historical knowledge under the banner of culture of memory, and breeds an unequalled democratization in historical representation. This book offers a unique approach based on the provocative and instigating intersection of scholarly research, its political appropriations, and social reflection from a representative sample of Central and East European countries.

Respect for Nature Paul W. Taylor 2011-04-11 What rational justification is there for conceiving of all living things as possessing inherent worth? In *Respect for Nature*, Paul Taylor draws on biology, moral philosophy, and environmental science to defend a biocentric environmental ethic in which all life has value. Without making claims for the moral rights of plants and animals, he offers a reasoned alternative to the prevailing anthropocentric view--that the natural environment and its wildlife are valued only as objects for human use or enjoyment. *Respect for Nature* provides both a full account of the biological conditions for life--human or otherwise--and a comprehensive view of the complex relationship between human beings and the whole of nature. This classic book remains a valuable resource for philosophers, biologists, and environmentalists alike--along with all those who care about the future of life on Earth. A new foreword by Dale Jamieson looks at how the original 1986 edition of *Respect for Nature* has shaped the study of environmental ethics, and shows why the work remains relevant to debates today.

Worldly Philosopher Jeremy Adelman 2014-10-26 *Worldly Philosopher* chronicles the times and writings of Albert O. Hirschman, one of the twentieth century's most original and provocative thinkers. In this gripping biography, Jeremy Adelman tells the story of a man shaped by modern horrors and hopes, a worldly intellectual who fought for and wrote in defense of the values of tolerance and change. This is the first major account of Hirschman's remarkable life, and a tale of the twentieth century as seen through the story of an astute and passionate observer. Adelman's riveting narrative traces how Hirschman's personal experiences shaped his unique intellectual perspective, and how his enduring legacy is one of hope, open-mindedness, and practical idealism.

Cosmopolitan Desires Mariano Siskind 2014-04-30 Mariano Siskind's groundbreaking debut book redefines the scope of world literature, particularly regarding the place of Latin America in its imaginaries and mappings. In Siskind's formulation, world literature is a modernizing discursive strategy, a way in which cultures negotiate their aspirations to participate in global networks of cultural exchange, and an original tool to reorganize literary history. Working with novels, poems, essays, travel narratives, and historical documents, Siskind reads the way Latin American literary modernity was produced as a global relation, from the rise of planetary novels in the 1870s and the cosmopolitan imaginaries of modernism at the turn of the twentieth century, to the global spread of magical realism. With its unusual breadth of reference and firm but unobtrusive grounding in philosophy, literary theory, and psychoanalysis, *Cosmopolitan Desires* will have a major impact in the fields of Latin American studies and comparative literature.

Organisation of the Organisationless Rodrigo Nunes 2014-03 Rejecting the dichotomy of centralism and horizontalism that has deeply marked millennial politics, Rodrigo Nunes' close analysis of network systems demonstrates how organising within contemporary social and political movements exists somewhere between - or beyond - the two. Rather than the party or chaos, the one or the multitude, he discovers a 'bestiary' of hybrid organisational forms and practices that render such disjunctives false. The resulting picture shows how social and technical networks can and do facilitate strategic action and fluid distributions of power at the same time. It is by developing the strategic potentials that are already immanent to networks, he argues, that contemporary solutions to the question of organisation can be developed. Transplantation Ethics Robert M. Veatch 2015-01-22 Although the history of organ transplant has its roots in ancient Christian mythology, it is only in the past fifty years that body parts from a dead person have successfully been procured and transplanted into a living person. After fourteen years, the three main issues that Robert Veatch first outlined in his seminal study *Transplantation Ethics* still remain: deciding when human beings are dead; deciding when it is ethical to procure organs; and deciding how to allocate organs, once procured. However, much has changed. Enormous strides have been made in immunosuppression. Alternatives to the donation model are debated much more openly--living donors are used more widely and hand and face transplants have become more common, raising issues of personal identity. In this second edition of *Transplantation Ethics*, coauthored by Lainie F. Ross, transplant professionals and advocates will find a comprehensive update of this critical work on transplantation policies.

The Hitler of History John Lukacs 2011-04-06 In this brilliant, strikingly original book, historian John Lukacs delves to the core of Adolf Hitler's life and mind by examining him through the lenses of his surprisingly diverse biographers. Since 1945 there have been more than one hundred biographies of Hitler, and countless other books on him and the Third Reich. What happens when so many people reinterpret the life of a single individual? Dangerously, the cumulative portrait that begins to emerge can suggest the face of a mythic antihero whose crimes and errors blur behind an aura of power and conquest. By reversing the process, by making Hitler's biographers--rather than Hitler himself--the subject of inquiry, Lukacs reveals the contradictions that take us back to the true Hitler of history. Like an attorney, Lukacs puts the biographies on trial. He gives a masterly account of all the major works and of the personalities, methods, and careers of the biographers (one cannot separate the historian from his history, particularly in this arena); he looks at what is still not known (and probably never will be) about Hitler; he considers various crucial aspects of the real Hitler; and he shows how different biographers have either advanced our understanding or gone off track. By singling out those who have been involved in, or co-opted into, an implicit "rehabilitation of Hitler," Lukacs draws powerful conclusions about Hitler's essential differences from other monsters of history, such as Napoleon, Mussolini, and Stalin, and--equally important--about Hitler's place in the history of this century and of the world.

Living Water Viktor Schauberger

Argentina, Israel, and the Jews Raanan Rein 2002 Though Israel has always defined itself as a Jewish state with the obligation to defend Jews anywhere in the world, the interests of the State have not always coincided with those of the Argentinian Jewish community. A divergence of interests was already evident during the regime of Juan Peron (1946-1955), and problems reached a climax after the kidnapping of Adolf Eichmann in May, 1960 and his trial in Israel. In this work, Raanan Rein explores the nature of Argentina's governments from 1947 to 1962 and their attitudes toward Israel and the local Jewish community. He treats the South American republic's neutral stance during World War II and explains to what extent the country served as a safe haven for Nazi war criminals.

The Healing Power of Water Masaru Emoto 2008-09-01 This book will transform your world view. Dr. Masaru Emoto's first book, *The Hidden Message in Water*, told about his discovery that crystals formed in frozen water revealed changes when specific, concentrated thoughts were directed toward them. He also found that water from clear springs and water that has been exposed to loving words showed brilliant, complex and colourful snowflake patterns. In contrast, polluted water, or water exposed to negative thoughts formed incomplete, asymmetrical patterns with dull colors. *The Healing Power of Water* includes contributions from leading scientists such as William A. Tiller, who was featured in the film *What the Bleep Do We Know!?*; and from spiritual teachers such as Doreen Virtue, Starhawk, William Bloom, and Sig Lonegren.

Revisionist Histories Marnie Hughes-Warrington 2013-07-18 Revision and revisionism are generally seen as standard parts of historical practice, yet they are underexplored within the growing literature on historiography. In this accessibly written volume, Marnie Hughes-Warrington discusses this paucity of work on revision in history theory and raises ethical questions about linear models and spatial metaphors that have been used to explain it. *Revisionist Histories* emphasises the role of the authors and audiences of histories alike as the writers and rewriters of history. Through study of digital environments, graphic novels and reader annotated texts, this book shows that the 'sides' of history cannot be disentangled from one another, and that they are subject to flux and even destruction over time. Incorporating diverse and controversial case studies, including the French Revolution, Holocaust Denial and European settlers' contact with Native Americans and Indigenous Australians, *Revisionist Histories* offers both a detailed account of the development of revisionism and a new, more spatial vision of historiography. An essential text for students of historiography.

Is the Sui Generis Right a Failed Experiment Robin Elizabeth Herr 2008 Controversial from its inception, the European Database Directive protects unoriginal contents in contrast to the United States, where there is no statutory protection. Despite this extra incentive, empirical evidence seems to indicate that database production in the European Community remains largely unchanged while that in the United States is increasing, at least in the short term. Dissatisfaction with the Directive has sparked efforts to revise database protection policy by the European Commission and others. In order to determine the best method of regulation, three factors are explored in this Ph.D. thesis: the nature of the database industry, regulatory theories emanating from economic analysis of the law, and the evidence offered by the US and EC protection regimes.

Ethics and the Clinical Encounter Richard M. Zaner 2004-02-01 *Ethics and the Clinical Encounter* explores the moral dimensions of clinical medicine and the phenomenon of illness, to determine what ethics must be in order to be fully responsive to clinical encounters. Written in a lively and conversational style with minimal technical terminology, and enhanced by actual experience or real clinical situations, this volume lays out a clinical ethics methodology both in practical and theoretical terms. Here's what the experts had to say: Professor Zaner has provided us with a remarkably lucid and trenchant discussion of the interface of philosophy and the field of medicine. He brings into play an extraordinary range of historical knowledge, extensive observations based on firsthand experience with medical practices, and an acute sense of philosophical argumentation. This is a work that will be an exemplary and indispensable text in the philosophy of medicine for years to come. -- Calvin Schrag... it is a highly original contribution usable in a number of fields.... It really has no competition.... The genius of Zaner's approach is to ground ethics from the 'bottom up' and to direct us to the concrete particulars of therapeutic encounters wherein lie moral and ethical matters ... meaty, challenging, and ultimately rewarding.... -- Paul R. Dokecki Richard M. Zaner founded the Center for Clinical and Research Ethics at Vanderbilt University Medical Center. Having established Vanderbilt's first Hospital Ethics Committee (1985), he served as co-chair of VUMC's Ethics Committee since its inception in 1990. Zaner has published five original books, edited ten, and translated four more, and has published more than 100 sections of books and professional journals.

La Imaginacion Tecnica Beatriz Sarlo 2003-06-01 "In what Beatriz Sarlo calls six "episodes," ranging from the proto-science fiction of Horacio Quiroga and the apocalyptic urban surrealism of Roberto Arlt through the development of mass media, tales of inventors and inventions, and an entertaining tour of "weird science" and medical quackery. *The Technical Imagination* examines how technology entered the popular imagination in 1920s and 1930s Argentina. Often wry, but always sympathetic, and dispensing erudition with a light touch, Sarlo shows how the products of modern technology (radio, the telephone and telegraph, movies, and rudimentary forays into television, among other phenomena) announced an unprecedented break with the past while also provoking an ironic recrudescence of age-old superstitions. Although the new technologies helped to shape notions of modernity at all levels of Argentine society, Sarlo focuses particularly on the working-class amateur inventors of Buenos Aires, and on how their inventions - even when they failed, as they frequently did - point to what can be recognized today as the reorganization of an intellectual hierarchy, and thus of an era's, and a culture's, intellectual history."--BOOK JACKET.

The Jewish Community of Cuba Margalit Bejarano 2014 combines the fruits of academic research with the personal reminiscences of protagonists, creating a collective narrative of Cuban Jews, particularly those who migrated to Miami, on their historical experience prior to the Castro revolution. Through childhood memories in small towns in Poland and Turkey, the reader discovers the circumstances that motivated the migration of Jews to Cuba, and is acquainted with the difficult trajectory of their adaptation to a new environment. The book recounts the version of Cuban Jews to the tragic voyage of the SS St. Louis, but at the same time it points out the destiny of thousands of Jewish refugees who had found in Cuba a shelter from the Nazi inferno. The book describes the rich and colorful Jewish institutional life, that covered all the social and cultural aspects. Protagonists, however, were not part of a uniform and homogenous community, as reflected in their testimonies on social and cultural life, political divisions and internal conflicts. The reader will find new oral documentation on the attitude of Cuban politicians towards the establishment of the State of Israel, and on the participation of young Cuban Jews in its War of Independence. The last chapter brings the memory of the lost Cuban paradise. Oral histories reflect the communal flourishing of the 1950s, the economic prosperity, the professional and social achievements but also the trauma of the Castro revolution, that motivated their second exodus. Though interviewees tend to idealize the pre-Castro era, their testimonies reflect the problematic of their marginality in the Cuban society, and the dilemma of dual identity that confronted the second generation.--

Our Knowledge of the Past Aviezer Tucker 2004-04-26 How do historians, comparative linguists, biblical and textual critics and evolutionary biologists establish beliefs about the past? How do they know the past? This book presents a philosophical analysis of the disciplines that offer scientific knowledge of the past. Using the analytic tools of contemporary epistemology and philosophy of science the book covers such topics as

evidence, theory, methodology, explanation, determination and underdetermination, coincidence, contingency and counterfactuals in historiography. Aviezer Tucker's central claim is that historiography as a scientific discipline should be thought of as an effort to explain the evidence of past events. He also emphasizes the similarity between historiographic methodology to Darwinian evolutionary biology. This is an important, fresh approach to historiography and will be read by philosophers, historians and social scientists interested in the methodological foundations of their disciplines.

Patient, Heal Thyself Robert M. Veatch 2009 "The change is in how we think about medical decision-making. Whereas modern medicine's core idea was that medical decisions should be based on the cold, hard facts of science-the province of the doctor-the "new medicine" reflects the notion that all medical decisions must impose value judgments. Since physicians can claim no expertise on making those value judgments, the pendulum has swung greatly toward the patient in evaluating alternatives and making decisions about their treatment." "Veatch uses a range of fascinating contemporary and historical examples to reveal how values underlie almost all medical procedures, and illustrate his case that this change is inevitable and a positive trend for patients."--BOOK JACKET.
