Last Looks, Last Books Helen Vendler 2010-03-01 Modern American poets writing in the face of death In *Last Looks, Last Books*, the eminent critic Helen Vendler examines the ways in which five great modern American poets, writing their final books, try to find a style that does justice to life and death alike. With traditional religious consolations no longer available to them, these poets must invent new ways to express the crisis of death, as well as the paradoxical coexistence of a declining body and an undiminished consciousness. In *The Rock*, Wallace Stevens writes simultaneous narratives of winter and spring; in *Ariel*, Sylvia Plath sustains melodrama in cool formality; and in *Day by Day*, Robert Lowell subtracts from plenitude. In *Geography III*, Elizabeth Bishop is both caught and freed, while James Merrill, in *A Scattering of Salts*, creates a series of self-portraits as he dies, representing himself by such things as a Christmas tree, human tissue on a laboratory slide, and the evening/morning star. The solution for one poet will not serve for another; each must invent a bridge from an old style to a new one. Casting a last look at life as they contemplate death, these modern writers enrich the resources of lyric poetry.

Liminal Lives Susan Merrill Squier 2004-11-16 Embryo adoptions, stem cells capable of transforming into any cell in the human body, intra- and inter-species organ transplantation—these and other biomedical advances have unsettled ideas of what it means to be human, of when life begins and ends. In the first study to consider the cultural impact of the medical transformation of the entire human life span, Susan Merrill Squier argues that fiction—particularly science fiction—serves as a space where worries about ethically and socially charged scientific procedures are worked through. Indeed, she demonstrates that in many instances

fiction has anticipated and paved the way for far-reaching biomedical changes. Squier uses the anthropological concept of liminality—the state of being on the threshold of change, no longer one thing yet not quite another—to explore how, from the early twentieth century forward, fiction and science together have altered not only the concept of the human being but the contours of human life. Drawing on archival materials of twentieth-century biology; little-known works of fiction and science fiction; and twentieth- and twenty-first century U.S. and U.K. government reports by the National Institutes of Health, the Parliamentary Advisory Group on the Ethics of Xenotransplantation, and the President's Council on Bioethics, she examines a number of biomedical changes as each was portrayed by scientists, social scientists, and authors of fiction and poetry. Among the scientific developments she considers are the cultured cell, the hybrid embryo, the engineered intrauterine fetus, the child treated with human growth hormone, the process of organ transplantation, and the elderly person rejuvenated by hormone replacement therapy or other artificial means. Squier shows that in the midst of new phenomena such as these, literature helps us imagine new ways of living. It allows us to reflect on the possibilities and perils of our liminal lives.

Our Marvelous Bodies Gary Merrill 2008-03-07 *Our Marvelous Bodies* offers a unique perspective on the structure, function, and care of the major systems of the human body. Unlike other texts that use a strictly scientific approach, physiologist Gary F. Merrill relays medical facts alongside personal stories that help students relate to and apply the information. Readers learn the basics of feedback control systems, homeostasis, and physiological gradients. These principles apply to an understanding of the body's functioning under optimal, healthy conditions, and they provide insight into states of acute and chronic illness. Separate chapters are devoted to each of the body's systems in detail: nervous, endocrine, cardiovascular, respiratory, renal, gastrointestinal, musculoskeletal, reproductive, and immune. Through a series of real-life examples, the book also shows the importance of maintaining careful medical records for health care professionals, scientists, and patients alike.

James Merrill Langdon Hammer 2015 A portrait of the 20th-century American poet details his high-privilege upbringing, the significant impact of his parents' divorce, his sexual orientation, his relationships with fellow artist and his decades-long romance with David Jackson.
