Colobine Monkeys Glyn Davies 1994-11-24 Colobine monkeys have a unique digestive system, analagous to that of ruminants, which allows them to exploit foliage as a food source. This gives them a niche in Old World forests where they are often the only abundant medium-sized arboreal folivorous mammal. From a possible Miocene origin, Colobine monkeys have radiated into a wide variety of forms inhabiting a range of tropical woodlands in Africa and Asia. Most of the extant species have been subject to long term field studies, but until this book, no synthesis of work on this group has been available. The central theme of is that of adaptive radiation, showing how the special features of colobine anatomy interacted with a range of ecosystems to produce the distinctive species of today. The book discusses parallels with other mammalian groups, and will be of relevance to workers in evolutionary ecology, primatology and tropical ecology.

Primate Adaptation and Evolution John G. Fleagle 1998-09-21 John Fleagle has improved on his 1988 text by reconceptualizing chapters and by bringing new findings in functional and evolutionary approaches to bear on his synthesis of comparative primate data. The Second Edition provides a foundation upon which students can develop an understanding of our primate heritage. It features up-to-date information gained through academic training, laboratory experience and field research. This beautifully illustrated volume provides a comprehensive introductory text explaining the many aspects of primate biology and human evolution. Key Features * Provides up-to-date information about many aspects of

primate biology and evolution * Contains a completely new chapter on primate communities * Presents totally revised chapters on primate origins, early anthropoids, and fossil platyrrhines * Includes an updated glossary, new illustrations, and a revised Classification of Order Primates * Succeeds as the best introductory text on primate evolution because it synthesizes and allows access to primary literature

The Primate Fossil Record Walter Carl Hartwig 2002-04-11 Publisher Description

Fossil Mammals of Asia Xiaoming Wang 2013-05-14 Fossil Mammals of Asia, edited by and with contributions from world-renowned scholars, is the first major work devoted to the late Cenozoic (Neogene) mammalian biostratigraphy and geochronology of Asia. This volume employs cutting-edge biostratigraphic and geochemical dating methods to map the emergence of mammals across the continent. Written by specialists working in a variety of Asian regions, it uses data from many basins with spectacular fossil records to establish a groundbreaking geochronological framework for the evolution of land mammals. Asia's violent tectonic history has resulted in some of the world's most varied topography, and its high mountain ranges and intense monsoon climates have spawned widely diverse environments over time. These geologic conditions profoundly influenced the evolution of Asian mammals and their migration into Europe, Africa, and North America. Focusing on amazing new fossil finds that have redefined Asia's role in mammalian evolution, this volume synthesizes information from a range of field studies on Asian mammals and biostratigraphy, helping to trace the histories and movements of extinct and extant mammals from various major groups and all northern continents, and providing geologists with a richer understanding of a variety of Asian terrains. *Hominoid Evolution and Climatic Change in Europe: Volume 1, The Evolution of Neogene Terrestrial Ecosystems in Europe* Jorge Agustí 1999-10-07 Reconstructs European and Mediterranean climate over the last 20 million years in relation to human evolution.

The Colobines Ikki Matsuda 2022-02-24 Covering colobine biology, behaviour, ecology and conservation, this book summarises current knowledge of this fascinating group of primates.

Tooth Enamel Microstructure W. von Koenigswald 2020-09-10 Enamel, the shiny material covering the teeth of vertebrates is the hardest tissue the vertebrate body can produce and one of the most impressive products of biomineralization. This hard tissue is closely related to feeding, the first part in the energy intake process so basic to vertebrate life. Enamel has a complex internal microstructure full of phylogenetic and biomechanic information. Topics covered: Ontogeny; Crystallite level; Prism level; Enamel type level; Schmelzmuster level; Dentition level; Evolution; Biomechanical level; Glossary.
