Waiting for an Echo Christine Montross 2021-07-20 “A haunting and harrowing indictment . . . [a] significant achievement.” —The New York Times Book Review L.A. Times Book Prize Finalist * New York Times Book Review Paperback Row * Time Best New Books July 2020 Waiting for an Echo is a riveting, rarely seen glimpse into American jails and prisons. It is also a damning account of policies that have criminalized mental illness, shifting large numbers of people who belong in therapeutic settings into punitive ones. Dr. Christine Montross has spent her career treating the most severely ill psychiatric patients. This expertise—the mind in crisis—has enabled her to reckon with the human stories behind mass incarceration. A father attempting to weigh the impossible calculus of a plea bargain. A bright young woman whose life is derailed by addiction. Boys in a juvenile detention facility who, desperate for human connection, invent a way to communicate with one another from cell to cell. Overextended doctors and correctional officers who strive to provide care and security in environments riddled with danger. Our methods of incarceration take away not only

freedom but also selfhood and soundness of mind. In a nation where 95 percent of all inmates are released from prison and return to our communities, this is a practice that punishes us all. **Double Bind: Women on Ambition** Robin Romm 2017-04-11 “Bold, absorbing, insightful, and wise. . . . Read it: the truth is inside.” — Cheryl Strayed, author of Wild and Tiny Beautiful Things “A work of courage and ferocious honesty” (Diana Abu-Jaber), Double Bind could not come at a more urgent time. Even as major figures from Gloria Steinem to Beyoncé embrace the word “feminism,” the word “ambition” remains loaded with ambivalence. Many women see it as synonymous with strident or aggressive, yet most feel compelled to strive and achieve—the seeming contradiction leaving them in a perpetual double bind. Ayana Mathis, Molly Ringwald, Roxane Gay, and a constellation of “nimble thinkers . . . dismantle this maddening paradox” (O, The Oprah Magazine) with candor, wit, and rage. Women who have made landmark achievements in fields as diverse as law, dog sledding, and butchery weigh in, breaking the last feminist taboo once and for all. “Both intimate and scalable” (Atlantic.com),

Double Bind finally seizes “ambition” from the roster of dirty words.

The Man Who Wasn't There Anil Ananthaswamy 2016-08-02 In the tradition of Oliver Sacks, science journalist Anil Ananthaswamy skillfully inspects the bewildering connections among brain, body, mind, self, and society by examining a range of neuropsychological ailments from autism and Alzheimer’s to out-of-body experiences and body integrity identity disorder Award-winning science writer Anil Ananthaswamy smartly explores the concept of self by way of several mental conditions that eat away at patients’ identities, showing we learn a lot about being human from people with a fragmented or altered sense of self.

Ananthaswamy travelled the world to meet those who suffer from “maladies of the self” interviewing patients, psychiatrists, philosophers and neuroscientists along the way. He charts how the self is affected by Asperger’s, autism, Alzheimer’s, epilepsy, schizophrenia, among many other mental conditions, revealing how the brain constructs our sense of self. Each chapter is anchored with stories of people who experience themselves differently from the norm. Readers meet individuals in various stages of Alzheimer’s disease where the loss of memory and cognition results in the loss of some aspects of the self. We meet a woman who recalls the feeling of her first major encounter with schizophrenia which she describes as an outside force controlling her. Ananthaswamy also looks at several less familiar conditions, such as Cotard’s syndrome, in which patients believe they are dead, and those with body integrity identity disorder, where the patient seeks to have a body part amputated because it “doesn’t belong to them.” Moving nimbly back and forth from the individual stories to scientific analysis *The Man Who Wasn’t There* is a wholly original exploration of the human self which raises fascinating questions about the mind-body connection.

The Stressed Years of Their Lives Dr. B. Janet Hibbs 2019-04-23 From two leading child and adolescent mental health experts comes a guide for the parents of every college and college-bound student who want to know what’s normal mental health and behavior, what’s not, and how to intervene before it’s too late. “The title says it all...Chock full of practical tools, resources and the wisdom that comes with years of experience, *The Stressed Years of their Lives* is destined to become a well-thumbed handbook to help families cope with this modern age of anxiety.” — Brigid Schulte, Pulitzer Prize-winning journalist, author of *Overwhelmed* and director of the Better Life Lab at New America All parenting is in preparation for letting go. However, the paradox of parenting is that the more we learn about late adolescent development and risk, the more frightened we become for our children, and the more we want to stay involved in their lives. This becomes particularly necessary, and also particularly challenging, in mid- to late adolescence, the years just before and after students head off to college. These years coincide with the emergence of many mood disorders and other mental health issues. When family psychologist Dr. B. Janet Hibbs's own son came home from college mired in a dangerous depressive spiral, she turned to Dr. Anthony Rostain. Dr. Rostain has a secret superpower: he understands the arcane rules governing privacy and parental involvement in students’ mental health care on college campuses, the same rules that sometimes hold parents back from getting good care for their kids. Now, these two doctors have combined their expertise to corral the crucial emotional skills and lessons that every parent and student can learn for a successful launch from home to college.

The Bio-clinical Interface J.-P. Macher 1995 This book is a selection of papers presented recently at the annual scientific conferences -- known as "the bioclinical interface" -- held at Rouffac in Alsace. It puts the accent firmly on the modern aspects and contemporary problems of psychiatry. The first part of the book deals with biological and clinical areas. The second gives an almost exhaustive overview of the psychiatric applications of imaging and magnetic resonance spectroscopy.

Icon: The Life, Times and Films of Marilyn Monroe Volume 2 1956 TO 1962 & Beyond Gary Vitacco-Robles 2014-11-11 Goddess... Legend... Icon... You thought you knew her... but never like this. Marilyn Monroe (1926-1962) survived a childhood marked by abuse, neglect, and chaos to become a psychological, cultural, and spiritual phenomenon of the Twentieth Century. Her remarkable life, brilliant film career, and posthumous legend have been deconstructed in over 600 biographies. Psychotherapist & author Gary Vitacco-Robles reframes and redefines the fascinating woman behind the iconic image through an analysis of her psyche and an appreciation of her film and stage performances in Volume 2 of this definitive biography. After a decade of meticulous research, Vitacco-Robles offers a treasure trove of facts comprehensively documenting each year of Monroe's inspiring life within the context of her tumultuous times, and through her relationships with literary, entertainment, and political figures. Monroe is resurrected a half-century after her tragic death in this detailed and sensitive biography that intelligently explores her passionate desires: to be loved, become a serious actress, and have a family. Volume 2 examines the last six years of Marilyn's life and her impact on our culture in the five decades following her early tragic death. Its pages provide a deeper understanding of

this remarkable woman and the lasting impression she left behind. Based upon interviews, diaries, and personal files—void of sensationalism—*Icon: The Life, Times, & Films of Marilyn Monroe* Vol. 2 dispels many myths and reveals the ultimate truth about Hollywood's most charismatic, beloved, and enduring star.

Afterlife Marcel Westerlund 2015-04-23 Many in the scientific community shun life after death, considering such experiences impossible. Marcel Westerlund is the exception. The Swedish psychiatrist, not only uses hypnotherapy to treat people's mental illnesses—he uses it to explore their afterlives as well. Despite being a highly controversial approach, his use of hypnotherapy results in some fascinating stories...and is even integrated directly into the sciences. Travel back with a patient as she recounts being a Queen of Egypt. Discover how a man finds his own grave, finally allowing him to connect with his spiritual existence and find healing. Read account after account of people who come to grips with their past lives, and use these experiences to find happiness in this life. Pills may curb depression, but Westerlund discovers that delving into people's past lives provides a healing force that he could never accomplish through regular medicine. He talks candidly about his job as a healer, as well as the importance of the spirit in mental recovery. Journey into the soul and learn, not only about the existence of past lives, but the science behind it.

Cultivating Mindfulness in Clinical Social Work Terry B. Northcut 2017-03-25 This practice-focused resource integrates broad

therapeutic knowledge with current neuroscience to present vast possibilities for mindfulness in clinical social work. Seasoned practitioners posit mindfulness practice and process as a significant bridge between taking care of self and taking care of others, demonstrating its implications for physical and mental health in personal and professional contexts. Case studies show timeless concepts (e.g., acceptance) and new mindfulness-based ideas (e.g., learned helpfulness) in use in individual treatment as well as couples counseling and group interventions. Also attesting to the utility of mindfulness across problems, settings, and practitioner orientations, diverse applications are organized along ten robust lenses, among them:

- Beginning with the context: the mind-body conundrum.
- Beginning with the body: the neurobiology of mindfulness.
- Beginning with the training: training clinicians in essential methods for integrating mindfulness in clinical practice.
- Beginning with the clients: mindfully reconciling opposites with survivors of trauma/complex traumatic stress disorders.
- Beginning with the symptom: incorporating mindfulness in the treatment of substance misuse.
- Beginning with the larger social system: mindfulness and restorative justice.

Clinicians and research professionals particularly interested in psychotherapy treatment and mindfulness practice will find *Cultivating Mindfulness in Clinical Social Work* not only stimulating and intriguing, but also a fresh source of real-world wisdom.

Brain On Fire: My Month of Madness Susannah Cahalan
2012-11-13 'My first serious blackout marked the line between sanity and insanity. Though I would have moments of lucidity over the coming days and weeks, I would never again be the same person ...' Susannah Cahalan was a happy, clever, healthy twenty-four-year old. Then one day she woke up in hospital, with no memory of what had happened or how she had got there. Within weeks, she would be transformed into someone unrecognizable, descending into a state of acute psychosis, undergoing rages and convulsions, hallucinating that her father had murdered his wife;

that she could control time with her mind. Everything she had taken for granted about her life, and who she was, was wiped out. *Brain on Fire* is Susannah's story of her terrifying descent into madness and the desperate hunt for a diagnosis, as, after dozens of tests and scans, baffled doctors concluded she should be confined in a psychiatric ward. It is also the story of how one brilliant man, Syria-born Dr Najjar, finally proved - using a simple pen and paper - that Susannah's psychotic behaviour was caused by a rare autoimmune disease attacking her brain. His diagnosis of this little-known condition, thought to have been the real cause of devil-possession through history, saved her life, and possibly the lives of many others. Cahalan takes readers inside this newly-discovered disease through the progress of her own harrowing journey, piecing it together using memories, journals, hospital videos and records. Written with passionate honesty and intelligence, *Brain on Fire* is a searingly personal yet universal book, which asks what happens when your identity is suddenly destroyed, and how you get it back. 'With eagle-eye precision and brutal honesty, Susannah Cahalan turns her journalistic gaze on herself as she bravely looks back on one of the most harrowing and unimaginable experiences one could ever face: the loss of mind, body and self. *Brain on Fire* is a mesmerizing story' -Mira Bartók, New York Times bestselling author of *The Memory Palace* Susannah Cahalan is a reporter on the New York Post, and the recipient of the 2010 Silurian Award of Excellence in Journalism for Feature Writing. Her writing has also appeared in the New York Times, and is frequently picked up by the Daily Mail, Gawker, Gothamist, AOL and Yahoo among other news aggregator sites.

Approaches to Discourse Poetics and Psychiatry Iris M. Zavala 1988-01-01 A collection of innovative essays representing the most recent developments in poetry as discourse, the discourse of power, and discourse of psychiatry and psychosis. The essays in this volume deal with questions of interpretation of poetry, psychoanalysis, and political theory. All are presented here as appropriate objects of discourse studies which go beyond conventional analysis.

Between Sanity and Madness Allan V. Horwitz 2020 "Between Sanity and Madness: Mental Illness from Homer to Neuroscience traces the extensive array of answers that various groups have provided to questions about the nature of mental illness and its boundaries with sanity. What distinguishes mental illnesses from other sorts of devalued conditions and from normality? Should medical, religious, psychological, legal, or no authority at all

respond to the mentally ill? Why do some people become mad? What treatments might help them recover? Despite general agreement across societies regarding definitions about the pole of madness, huge disparities exist on where dividing lines should be placed between it and sanity and even if there is any clear demarcation at all. Various groups have provided answers to these puzzles that are both widely divergent and surprisingly similar to current understandings"--

Descending with angels Christian Suhr 2019-07-28 Over several years, Christian Suhr followed Muslim patients being treated for jinn possession and psychosis in a Danish mosque and in a psychiatric hospital. Through rich filmic and textual case studies, he shows how the bodies and souls of Muslim patients become a battlefield between the moral demands of Islam and the psychiatric institutions of European nation-states. The book reveals how both psychiatric and Islamic healing work to produce relief from pain, and also entail an ethical transformation of the patient and the cultivation of religious and secular values through the experience of pain. Creatively exploring the analytic possibilities provided by the use of a camera, both text and film show how disruptive ritual techniques are used in healing to destabilise individual perceptions and experiences of agency, which allows patients to submit to the invisible powers of psychotropic medicine or God.

A General Theory of Love Thomas Lewis 2007-12-18 This original and lucid account of the complexities of love and its essential role in human well-being draws on the latest scientific research. Three eminent psychiatrists tackle the difficult task of reconciling what artists and thinkers have known for thousands of years about the human heart with what has only recently been learned about the primitive functions of the human brain. *A General Theory of Love* demonstrates that our nervous systems are not self-contained:

from earliest childhood, our brains actually link with those of the people close to us, in a silent rhythm that alters the very structure of our brains, establishes life-long emotional patterns, and makes us, in large part, who we are. Explaining how relationships function, how parents shape their child's developing self, how psychotherapy really works, and how our society dangerously flouts essential emotional laws, this is a work of rare passion and eloquence that will forever change the way you think about human intimacy.

Self and Others N. Gregory Hamilton, M.D. 1999-11-01 Self and Others is addressed to students and practitioners of psychoanalysis and psychoanalytic psychotherapy. Its 19 chapters are divided into five evenly balanced parts. The first rubric, "Self, Others, and Ego," introduces us to the units of the intersubjective constitution we have come to know as object relations theory. The second rubric, "Developing Object Relations," is a confluence of lessons derived from infant studies and the psychotherapeutic process, specifically from the work of Mahler and Kernberg. Third, Hamilton integrates into an "Object Relations Continuum" Mahler's developmental stages and organizational series with nosological entities and levels of personality organization. Under the penultimate rubric, "Treatment," levels of object relatedness and types of psychopathology are grounded in considerations of technique in treatment, and generous clinical vignettes are provided to illustrate the technical issues cited. Last, the rubric of "Broader Contexts" takes object relations theory out of the consulting room into application areas that include folklore, myth, and transformative themes on the self, small and large groups, applications of object relations theory outside psychoanalysis, and the evolutionary history and politics of object relations theory. This volume thus presents an integrative theory of object relations that links theory with practice. But, more than that, Hamilton accomplishes his objective of delineating an integrative theory that is quite free of rivalry between schools of thought. An

indispensable contribution to beginning psychoanalytic candidates and other practitioners as well as those who wish to see the application of object relations theories to fields outside of psychoanalysis. —Psychoanalytic Books: A Quarterly Journal of Reviews A Jason Aronson Book

The Jung Reader David Tacey 2012 The nature of the psyche.
Life On Air David Hendy 2008-09-25 Radio Four has been described as 'the greatest broadcasting channel in the world', the 'heartbeat of the BBC', a cultural icon of Britishness, and the voice of Middle England. Defined by its rich mix, encompassing everything from journalism and drama to comedy, quizzes, and short-stories. Many of its programmes - such as Today, The Archers, Woman's Hour, The Hitchhiker's Guide To the Galaxy, Gardeners' Question Time, and The Shipping Forecast - have been part of British life for decades. Others, less successful, have caused offence and prompted derision. Born as it was in the Swinging Sixties, Radio Four's central challenge has been to change with the times, while trying not to lose faith with those who see it as a standard-bearer for quality, authoritativeness, or simply 'old-fashioned' BBC values. In this first major behind-the-scenes account of the station's history, David Hendy - a former producer for Radio Four - draws on privileged access to the BBC's own archives and new interviews with key personnel to illuminate the arguments and controversies behind the creation of some of its most popular programmes. He reveals the station's struggle to justify itself in a television age, favouring clear branding and tightly-targeted audiences, with bitter disputes between the BBC and its fiercely loyal listeners. The story of these struggles is about more than the survival of one radio network: Radio Four has been a lightning rod for all sorts of wider social anxieties over the past forty years. A kaleidoscopic view of the changing nature of the BBC, the book provides a gripping insight into the very nature of British life and culture in the last decades of the twentieth century.
Change Your Brain, Change Your Life Daniel G. Amen, M.D.

2008-06-10 **BRAIN PRESCRIPTIONS THAT REALLY WORK** In this breakthrough bestseller, you'll see scientific evidence that your anxiety, depression, anger, obsessiveness, or impulsiveness could be related to how specific structures in your brain work. Second Sight Judith Orloff 2008-12-14 In this compelling self-portrait, psychic and psychiatrist Dr. Judith Orloff, "one of the frontier people in health, who was not satisfied with the existing

order, the Establishment, and began to push for the expansion of knowledge which the establishment, of course, often rejected and for which it sought to punish them," (The Nation Magazine) draws on her own experience and that of her patients to explore the mysterious and poorly understood realm of the psychic. In riveting detail, she describes how an ignored premonition of a patient's suicide attempt convinced her to embrace her gift and incorporate it into her medical practice--and how using psychic abilities can provide powerful healing. More than simply one woman's journey, this book will also outline effective ways to cultivate natural psychic abilities, including how to--recognize psychic experiences in everyday life--increase clairvoyance--practice psychic exercises--discover psychic empathy--tune into messages the body is sending--record and interpret dreams--and more.

Diagnosing Literary Genius Irina Sirotkina 2002-01-11 Irina Sirotkina explores the transformations of Russian psychiatric practice through its relationship to literature during the period 1880-1930, when psychiatrists began to view literature as an indicator of the nation's mental health.
