Computational Intelligence for Decision Support Zhengxin Chen 1999-11-24 Intelligent decision support relies on techniques from a variety of disciplines, including artificial intelligence and database management systems. Most of the existing literature neglects the relationship between these disciplines. By integrating AI and DBMS, Computational Intelligence for Decision Support produces what other texts don't: an explanation of how to use AI and DBMS together to achieve high-level decision making. Threading relevant disciplines from both science and industry, the author approaches computational intelligence as the science developed for decision support. The use of computational intelligence for reasoning and DBMS for retrieval brings about a more active role for computational intelligence in decision support, and merges computational intelligence and DBMS. The introductory chapter on technical aspects makes the material accessible, with or without a decision support background. The examples illustrate the large number of applications and an annotated bibliography allows you to easily delve into subjects of greater interest. The integrated perspective creates a book that is, all at once, technical, comprehensible, and usable. Now, more than ever, it is important for science and business workers to creatively combine their knowledge to generate effective, fruitful decision support. Computational Intelligence for Decision Support makes this task manageable.

Discourse and Organization David Grant 1998-09-18 This major work from renowned scholars in the field, analyzes the role of language and symbolic media and shows how this enables us to move to new levels of understanding of contemporary organizational issues. An introductory chapter examines the role and growing importance of discourse in the study of organizations. It critically evaluates the contributions of various disciplines and defines organizational discourse as a subject area. The chapters in the first section, Talk and Action, explore the relationship between discourse, action and interaction and their impact on organizational structure and behaviour. Stories and Sensemaking focuses on the analytical potential of the `story' as a means of illuminating the ways in which organizational members make sense of their experience of organization. The Trojan Horse in the Tribal Classroom Thomas Alan Tobin 2022-05-04 The Trojan Horse in the Tribal Classroom: How Culture Wars are Waged and Won on the Front Lines of Education By: Thomas Alan Tobin All three hundred thirty million of us are immersed in culture wars at every turn. It's one of the great disadvantages of diversity. One such "warfare" has been hidden from all of us despite the fact that we had to face it almost daily in our formative years. The battleground for this most common cultural conflict is where we all spent at least 40% of our school-years, preparing not just for unforeseen pandemics, such as we're caught up in now, nor also for dealing with the economic, ecological, and political divisions that currently confront all arenas of American society. Surprisingly it's our educational system, and especially the classroom, where the frontlines of cultural "warfare" may have kept us constantly struggling for so long. Unwittingly and unwillingly drafted into these social and cultural battles, we've been trained to continue this perennial struggle between academic and popular sub-cultures in our schools. The Trojan Horse in the Tribal Classroom reveals the situational factors and functions that have caused education to become an "embattled institution and teaching an embattled profession." Most importantly it proposes social and cultural solutions to these problems that promise real institution-wide improvement and a completely reconstructed, truly academic classroom culture. One reading of this book will totally revise one's vision of American education and our memories of thousands of hours of classroom life. -- Dr. Regina Peter, Executive Director NEWMARK Education
