Capital Investment in Steel William Thomas Hogan 1992 The author discusses the uses and sources for capital in the steel industry in the 1990s. Arguing that the massive capital investment of the 1980s will continue, he identifies areas where this capital will be spent, including pension schemes, anti-pollution measures, and joint ventures between steel companies, both domestically and internationally. Additionally, as privatization continues in the 90s, more capital will shift from government-owned facilities to private individuals. Hogan asserts that capital which was readily available in the 1980s, will be more difficult to obtain in the recessionary 1990s, but available for projects deemed necessary to prepare the industry for the 21st century.

The World Aluminum Industry in a Changing Energy Era Merton J. Peck 2015-09-16 As a heavy user of electricity the primary aluminium smelting industry is a leading example of the effects of variations in energy costs. This title tells the story that with the rise in energy costs, three regions—Japan, the United States, and Western Europe -have become high-cost locations for primary aluminium production relative to three other regions—Australia, Brazil, and Canada. First published in 1988, this volume presents an analysis of the public policy choices regarding the aluminium industry and electric power in both low-cost power countries and high-cost power countries. The World Aluminium Industry in a Changing Energy World is ideal for policy makers and students interested in environmental studies.
