Technology Transfer Shastri Moonan 2013-06-17 This study focuses on technology transfer in the steel mini-mill industry. It identifies two central issues: how capacity is built and how demand is sustained, developing a three-dimensional perspective to bring into sharp focus the desirability and necessity of technology transfer. The three-dimensional perspective focuses on the changes in the marketplace for flat steel sheets, the responsiveness and sensitivity to these market changes, and applying the best available technology to obtain a high quality product. Prior to this study, technology transfer has been examined in a bivariate relationship, namely, how technology transfer contributed to the development process in developing countries and Newly Industrialized Countries (NICs). The framework formulated in this study showed that Japan was lagging behind all the steel-producing countries because, like the NICs, it imported the physical and organizational technologies that fostered its prosperity. Based on primary and secondary research, this study revealed that high levels of operational efficiency and sophisticated product quality were achieved through continuous improvement culminating in Computer Integrated Manufacturing (CIM) consisting of Real Time Process Control. On the other hand, the research also revealed that China based the improvement of its steel industry on self-reliance combined with judicious selection of foreign collaboration. The theoretical underpinnings of the crucial issues in this study led to the development of an interactive model of technology transfer based upon stock and flow variables.

Designing with Plastics and Composites: A Handbook Donald Rosato

2013-04-18 For some time there has been a strong need in the plastic and related industries for a detailed, practical book on designing with plastics and composites (reinforced plastics). This one-source book meets this criterion by clearly explaining all aspects of designing with plastics, as can be seen from the Table of Contents and Index. It provides information on what is ahead as well as today's technology. It explains how to interrelate the process of meeting design performance requirements with that of selecting the proper plastic and manufacturing process to make a product at the lowest cost. This book has been prepared with an awareness that its usefulness will depend greatly upon its simplicity. The overall guiding premise has therefore been to provide all essential information. Each chapter is organized to best present a

methodology for designing with plastics and composites. of industrial designers, whether in engineering This book will prove useful to all types or involved in products, molds, dies or equipment, and to people in new-product ventures, research and development, marketing, purchasing, and management who are involved with such different products as appliances, the building industry, autos, boats, electronics, furniture, medical, recreation, space vehicles, and others. In this handbook the basic essentials of the properties and processing behaviors of plastics are presented in a single source intended to be one the user will want to keep within easy reach.

The World Aluminum Industry in a Changing Energy Era Merton J. Peck
2015-09-16 As a heavy user of electricity the primary aluminium smelting

industry is a leading example of the effects of variations in energy costs. This title tells the story that with the rise in energy costs, three regions—Japan, the United States, and Western Europe –have become high-cost locations for primary aluminium production relative to three other regions—Australia, Brazil, and Canada. First published in 1988, this volume presents an analysis of the public policy choices regarding the aluminium industry and electric power in both low-cost power countries and high-cost power countries. The *World Aluminium Industry in a Changing Energy World* is ideal for policy makers and students interested in environmental studies.
