The Structure of

Detachment Hiroshi Nara
2004-04-30 Published in 1930, when Japan was struggling to define and assert its national and cultural identity, *The Structure of Iki* (*Iki no kôzô*) re-introduced the Japanese to a sophisticated tradition of urbane and spirited stylishness (*iki*) that was forged in the Edo period. Upon his return from Europe, Kuki Shûzô (1888–1941) made use of the new theoretical frameworks based on Western Continental methodology to redefine the significance of *iki* in Japanese society and culture. By applying Heidegger's hermeneutics to this cultural phenomenon, he

attempted to recast traditional understanding in the context of Western aesthetic theory and reestablish the centrality of a purely Japanese sense of "taste." The three critical essays that accompany this new translation of *The Structure of Iki* look at various aspects of Kuki, his work, and the historical context that influenced his thinking. Hiroshi Nara first traces Kuki's interest in a philosophy of life through his exposure to Husserl, Heidegger, and Bergson. In the second essay, J. Thomas Rimer compels readers to reexamine *The Structure of Iki* as a work in the celebrated tradition of *zuihitsu* (stream-of-consciousness writings) and takes into account French literary influences on Kuki. The philosopher's controversial link with Heidegger is explored by Jon Mark Mikkelsen in the final essay.

volume surveys the data available in the literature for solid-fluid solubility equilibria plus selected solid-liquid-vapour equilibria, for binary systems containing alkali and ammonium chlorides in water or heavy water. Solubilities covered are lithium chloride, sodium chloride, potassium chloride, rubidium chloride, caesium chloride and ammonium chloride in water and heavy water.

Fracture Mechanics Surjya Kumar Maiti 2015-10-01

Fracture mechanics studies the development and spreading of cracks in materials. The study uses two techniques including analytical and experimental solid mechanics. The former is used to determine the driving force on a crack and the latter is used to measure material's resistance to fracture. The text begins with a detailed discussion of fundamental concepts including linear elastic fracture mechanics (LEFM), yielding fracture mechanics, mixed mode fracture and computational aspects of linear elastic fracture mechanics. It explains important topics

including Griffith theory of brittle crack propagation and its Irwin and Orowan modification, calculation of theoretical cohesive strength of materials through an atomic model and analytical determination of crack tip stress field. This book covers MATLAB programs for calculating fatigue life under variable amplitude cyclic loading. The experimental measurements of fracture toughness parameters K_{IC}, J_{IC} and crack opening displacement (COD) are provided in the last chapter.

Chemical Engineer 1912 Metals in America's Historic Buildings

Margot Gayle 1998-02-01 Promotes an awareness of metals in America's buildings and monuments, and makes recommendations for the preservation and repair of such metals. Intended for owners, architects, and building managers who are responsible for the preservation and maintenance of America's architectural heritage. When metal building components need rehabilitation or

maintenance, info. on proper preservation techniques for each metal and its alloys has not been available. This sourcebook on historic architectural metals is a reference on metals used in architecture; how they are used, how to identify them, and when to replace them. Photos

Manufacturing Integrated Design

Peter Groche
2017-03-29 The book gives a systematic and detailed description of a new integrated product and process development approach for sheet metal manufacturing. Special attention is given to manufacturing that unites multidisciplinary competences of product design, material science, and production engineering, as well as mathematical optimization and computer based information technology. The case study of integral sheet metal structures is used by the authors to introduce the results related to the recent manufacturing technologies of linear flow splitting, bend splitting, and corresponding integrated process chains for sheet metal structures.
