**Macroeconomics** Stephen D. Williamson 2002 Built on the premise that undergraduate intermediate macroeconomics should be taught similarly to how modern macroeconomics

research and graduate teaching are done, Stephen Williamson presents a modern approach to macroeconomics that is built up from microeconomic principles. This philosophy not only

reinforces what students have learned in microeconomics, but it also gives them the tools necessary for later courses in the economics field. The approach in Macroeconomics is even-handed and not biased toward a particular school of thought. The focus is on the market-clearing approach, but with a more central treatment of Keynesian analysis. The inclusion of Keynesian analysis provides more flexibility in the teaching of the course, without sacrificing the rigor of a micro-based model of macroeconomics. For those who don't think Keynesian approaches are useful, they can easily be omitted without loss of continuity.

### **Pandemics: Insurance and Social Protection**

María del Carmen Boado-Penas 2021 This open access book collects expert contributions on actuarial modelling and related topics, from machine learning to legal aspects, and reflects on possible insurance designs during an epidemic/pandemic. Starting by considering the impulse given by COVID-19

to the insurance industry and to actuarial research, the text covers compartment models, mortality changes during a pandemic, risk-sharing in the presence of low probability events, group testing, compositional data analysis for detecting data inconsistencies, behaviouristic aspects in fighting a pandemic, and insurers' legal problems, amongst others. Concluding with an essay by a practicing actuary on the applicability of the methods proposed, this interdisciplinary book is aimed at actuaries as well as readers with a background in mathematics, economics, statistics, finance, epidemiology, or sociology.

### **Quantile Regression**

Roger Koenker 2005-05-05

Quantile regression is gradually emerging as a unified statistical methodology for estimating models of conditional quantile functions. By complementing the exclusive focus of classical least squares regression on the conditional mean, quantile regression offers a systematic strategy for examining how covariates influence the location, scale and shape of the entire response distribution. This monograph is the first comprehensive treatment of the subject, encompassing models that are linear and nonlinear, parametric and nonparametric. The author has devoted more than 25 years of research to this topic. The methods in the analysis are illustrated with a variety of applications from economics, biology, ecology and finance. The

treatment will find its core audiences in econometrics, statistics, and applied mathematics in addition to the disciplines cited above. *Guide to Graduate Study in Economics, Agricultural Economics, and Doctoral Degrees in Business and Administration in the United States of America and Canada* Wyn F. Owen 1984 [Economic Perspectives on Incarceration and the Criminal Justice System](#) Executive Office Executive Office of the President 2016-09-01 Calls for criminal justice reform have been mounting in recent years, in large part due to the extraordinarily high levels of incarceration in the United States. Today, the incarcerated population is 4.5 times larger than in 1980, with approximately 2.2 million people in the United States behind bars, including individuals in Federal and State prisons as well as local jails. The push for reform comes from many angles, from the high

financial cost of maintaining current levels of incarceration to the humanitarian consequences of detaining more individuals than any other country. Economic analysis is a useful lens for understanding the costs, benefits, and consequences of incarceration and other criminal justice policies. In this report, we first examine historical growth in criminal justice enforcement and incarceration along with its causes. We then develop a general framework for evaluating criminal justice policy, weighing its crime-reducing benefits against its direct government costs and indirect costs for individuals, families, and communities. Finally, we describe the Administration's holistic approach to criminal justice reform through policies that impact the community, the cell block, and the courtroom.

Norrin M. Ripsman 2016  
"Neoclassical realism is a major theoretical approach to the study of foreign policy. Norrin M. Ripsman, Jeffrey W. Taliaferro, and Steven E. Principles of Conflict Economics

Charles H. Anderton 2009-03-16  
Conflict economics contributes to an understanding of violent conflict in two important ways. First, it applies

economic analysis to diverse conflict activities such as war, arms races, and terrorism, showing how they can be understood as purposeful choices responsive to underlying incentives. Second, it treats appropriation as a fundamental economic activity, joining production and exchange as a means of wealth acquisition. Drawing on a half-century of scholarship, this book presents a primer on the key themes and principles of conflict economics. Although much work in the field is abstract, the book is made accessible to a broad audience of scholars, students and policymakers by relying on historical data, relatively simple graphs and intuitive narratives. In exploring the interdependence of economics and conflict, the book presents current perspectives of conflict economics in novel ways and offers new insights into economic aspects of

violence.

## **Personalized Machine Learning**

Julian McAuley  
2022-01-31 Every day we interact with machine learning systems offering individualized predictions for our entertainment, social connections, purchases, or health. These involve several modalities of data, from sequences of clicks to text, images, and social interactions. This book introduces common principles and methods that underpin the design of personalized predictive models for a variety of settings and modalities. The book begins by revising 'traditional' machine learning models, focusing on adapting them to settings involving user data, then presents techniques based on advanced principles such as matrix factorization, deep learning, and generative modeling, and concludes with a detailed study of the consequences and risks of deploying personalized

predictive systems. A series of case studies in domains ranging from e-commerce to health plus hands-on projects and code examples will give readers understanding and experience with large-scale real-world datasets and the ability to design models and systems for a wide range of applications.

### **Moving to Markets in Environmental**

**Regulation** Jody Freeman  
2006-11-30 Over the last decade, market-based incentives have become the regulatory tool of choice when trying to solve difficult environmental problems. Evidence of their dominance can be seen in recent proposals for addressing global warming (through an emissions trading scheme in the Kyoto Protocol) and for amending the Clean Air Act (to add a new emissions trading systems for smog precursors and mercury--the Bush administration's "Clear Skies" program).

They are widely viewed as more efficient than traditional command and control regulation. This collection of essays takes a critical look at this question, and evaluates whether the promises of market-based regulation have been fulfilled. Contributors put forth the ideas that few regulatory instruments are actually purely market-based, or purely prescriptive, and that both approaches can be systematically undermined by insufficiently careful design and by failures of monitoring and enforcement. All in all, the essays recommend future research that no longer pits one kind of approach against the other, but instead examines their interaction and compatibility. This book should appeal to academics in environmental economics and law, along with policymakers in government agencies and advocates in non-governmental

organizations.

*Macroeconomics* Campbell McConnell 2011-01-12  
McConnell, Brue, and Flynn's *Economics: Principles, Problems, and Policies* is the #1 Principles of Economics textbook in the world. It continues to be innovative while teaching students in a clear, unbiased way. The 19th Edition builds upon the tradition of leadership by sticking to 3 main goals: Help the beginning student master the principles essential for understanding the economizing problem, specific economic issues, and the policy alternatives; help the student understand and apply the economic perspective and reason accurately and objectively about economic matters; and promote a lasting student interest in economics and the economy. Connect is the only integrated learning system that empowers students by continuously adapting to deliver precisely

what they need, when they need it, and how they need it, so that your class time is more engaging and effective.

**Covid-19 in Asia** Victor V. Ramraj 2020-11-19 This is a book for an extraordinary time, about a pandemic for which there is no modern precedent. It is an edited collection of original essays on Asia's legal and policy responses to the Covid-19 pandemic, which, in a matter of months, swept around the globe, infecting millions. It transformed daily life in almost every corner of the planet: lockdowns of cities and entire countries, physical distancing and quarantines, travel restrictions and border controls, movement-tracking technology, mandatory closures of all but essential services, economic devastation and mass unemployment, and government assistance programs on record-breaking scales. Yet a pandemic on this scale,

under contemporary conditions of globalization, has left governments and their advisors scrambling to improvise solutions, often themselves unprecedented in modern times, such as the initial lockdown of Wuhan. This collection of essays analyzes law and policy responses across Asia, identifying cross-cutting themes and challenges. It taps the collective knowledge of an interdisciplinary team of sixty-one researchers both in the service of policy development, and with the goal of establishing a scholarly baseline for research after the storm has passed. The collection begins with an epidemiological overview and survey of the law and policy themes. The jurisdiction-specific case studies and cross-cutting thematic essays cover five topics: first wave containment measures; emergency powers; technology, science, and

expertise; politics, religion, and governance; and economy, climate, and sustainability.

Robbins 2007 This book by

Lionel Robbins first

appeared in 1932 as an

outstanding English-

language statement of the

Misesian view of economic

method, namely that

economics is a social

science and must advance

its propositions by means of

deductive reasoning and not

through the methods used

in the natural sciences. The

case is argued here with

patience and attention to

scholarly details. The

unfortunate second edition

of this book, which is more

confusions by departing

from Austrian

microeconomic theory. Thus

does the Mises Institute

edition with this reprint.

"Reading Robbins," writes Samuel Bostaph of the University of Dallas, "is an excellent way of contrasting his explanation of the basic nature of economics with that of the Austrian School, as found in the work of Mises as an extension of Carl Mengers's foundations. Such a reading wonderfully clarifies one's understanding of the basic conception of economics as a science of human action, rather than one of mere 'economizing.' "

**China and Europe on the New Silk Road** Marijk van der Wende 2020-10-08  
The global order, based on international governance and multilateral trade mechanisms in the aftermath of the Second World War, is changing rapidly and creating waves of uncertainty. This is especially true in higher education, a field increasingly built on international cooperation and the free movement of students, academics, knowledge, and ideas. Meanwhile, China has announced its plans for a "New Silk Road" (NSR) and is developing its higher education and research systems at speed. In this book an international and interdisciplinary group of scholars from Europe, China, the USA, Russia, and

Australia investigate how academic mobility and cooperation is taking shape along the New Silk Road and what difference it will make, if any, in the global higher education landscape. Opening chapters present the global context for the NSR, the development of Chinese universities along international models, and the history and outcomes of EU-China cooperation. The flows and patterns in academic cooperation along the NSR as they shape and have been shaped by China's universities are then explored in more detail. The conditions for Sino-foreign cooperation are discussed next, with an analysis of regulatory frameworks for cooperation, recognition, data, and privacy. Comparative work follows on the cultural traditions and academic values, similarities, and differences between Sinic and Anglo-American political and educational cultures, and their

implications for the governance and mission of higher education, the role of critical scholarship, and the state and standing of the humanities in China. The book concludes with a focus on the "Idea of a University"; the values underpinning its mission, shape, and purpose, reflecting on the implications of China's rapid higher education development for the geopolitics of higher education itself.

Handbook of Corporate Finance B. Espen Eckbo  
2007-05-21 Judging by the sheer number of papers reviewed in this Handbook, the empirical analysis of firms' financing and investment decisions—empirical corporate finance—has become a dominant field in financial economics. The growing interest in everything “corporate is fueled by a healthy combination of fundamental theoretical developments

and recent widespread access to large transactional data bases. A less scientific—but nevertheless important—source of inspiration is a growing awareness of the important social implications of corporate behavior and governance. This Handbook takes stock of the main empirical findings to date across an unprecedented spectrum of corporate finance issues, ranging from econometric methodology, to raising capital and capital structure choice, and to managerial incentives and corporate investment behavior. The surveys are written by leading empirical researchers that remain active in their respective areas of interest. With few exceptions, the writing style makes the chapters accessible to industry practitioners. For doctoral students and seasoned academics, the surveys offer dense roadmaps into the empirical research

landscape and provide suggestions for future work. \*The Handbooks in Finance series offers a broad group of outstanding volumes in various areas of finance \*Each individual volume in the series should present an accurate self-contained survey of a sub-field of finance \*The series is international in scope with contributions from field leaders the world over

**Handbook of Experimental Economic Methodology** Guillaume R. Fréchette 2015-01-02 The Handbook of Experimental Economic Methodology, edited by Guillaume R. Fréchette and Andrew Schotter, aims to confront and debate the issues faced by the growing field of experimental economics. For example, as experimental work attempts to test theory, it raises questions about the proper relationship between theory and experiments. As experimental results are used to inform policy, the

utility of these results outside the lab is questioned, and finally, as experimental economics tries to integrate ideas from other disciplines like psychology and neuroscience, the question of their proper place in the discipline of economics becomes less clear. This book contains papers written by some of the most accomplished scholars working at the intersection of experimental, behavioral, and theoretical economics talking about methodology. It is divided into four sections, each of which features a set of papers and a set of comments on those papers. The intention of the volume is to offer a place where ideas about methodology could be discussed and even argued. Some of the papers are contentious---a healthy sign of a dynamic discipline---while others lay out a vision for how the authors think experimental economics should be pursued. This

exciting and illuminating collection of papers brings light to a topic at the core of experimental economics. Researchers from a broad range of fields will benefit from the exploration of these important questions.

### **AI and Financial Markets**

Shigeyuki Hamori

2020-07-01 Artificial

intelligence (AI) is regarded as the science and technology for producing an intelligent machine, particularly, an intelligent computer program.

Machine learning is an approach to realizing AI comprising a collection of statistical algorithms, of which deep learning is one such example. Due to the rapid development of computer technology, AI has been actively explored for a variety of academic and practical purposes in the context of financial markets. This book focuses on the broad topic of “AI and Financial Markets”, and includes novel research associated with this topic.

The book includes contributions on the application of machine learning, agent-based artificial market simulation, and other related skills to the analysis of various aspects of financial markets.

*Contemporary Issues in Business and Economics*  
Chia-Lin Chang 2020-07-01

This book is a collection of high-impact papers accepted and presented at the 2019 Vietnam's Business and Economics Research Conference (VBER2019) organised by Ho Chi Minh City Open University held on 18th–20th July 2019. The Special Issue is associated with a broad coverage of the contemporary issues in Business and Economics in Vietnam and other emerging markets reflecting a key theme of VBER2019: Vietnam's Place in the Asia Pacific Region. A total of 14 papers were published from

more than the 120 submissions to the VBER2019 Conference. Published papers had been undergone a rigorous reviewing process conducted by the Journal of Risk and Financial Management. The papers incorporated in this book address contemporary issues in business and economics from Vietnam and other emerging markets in the Asian region from various angles such as economics, finance, and statistics to management science. At the time of writing this note, some of the papers have attracted more than 1000 downloads in 3 months. In particular, a paper on "Foreign Direct Investment and Economic Growth from Developing Countries in the Short Run and Long Run" by Trang Thi-Huyen Dinh and her team has attracted almost 6000 downloads in 3 months. These statistics indicate that the papers published in this Special

Issue have attracted the wide interest of readers. Among these 14 published papers, three main areas of important contemporary issues in Business and Economics in the Asian region can be identified. First, a block of papers deals with various important and fundamental issues in the emerging markets the Asian region, from exchange rate regime, financial inclusion, and financial development to energy consumption and environmental degradation. On the issue of CO<sub>2</sub> emissions, energy consumption and economic growth in the ASEAN, Vo, Vo, and Le utilized various time series econometrics approaches. Key findings from this paper indicate that there are no long-run relationships among carbon dioxide (CO<sub>2</sub>) emissions, energy consumption, renewable energy, population growth, and economic growth in the Philippines and Thailand,

but a relationship does exist in Indonesia, Myanmar, and Malaysia. Loo, in his paper on financial inclusion for the ASEAN, concluded that advancing internet capability and availability present investors an opportunity to offer financial technology or Fintech to meet the need for financial services in this digital era. Second, a challenge in quantitative studies for a single country, such as Vietnam, with limited data is generally noted. However, various empirical studies on Vietnam's business and economics issues have been conducted. Nguyen, Quan, and Pham examined the cultural distance and entry mode of foreign direct investment in Vietnam. A key finding from their paper is that when there is a great cultural difference between Vietnam and their home country, foreign-invested firms prefer wholly owned subsidiaries over equity joint ventures. Within the

Vietnamese market, Pham, Vo, Ho, and McAleer conducted a study on the issue of corporate financial distress. The authors conclude that the corporate financial distress prediction model, which includes accounting factors with macroeconomic indicators, performs much better than alternative models. In addition, the evidence confirms that the global financial crisis (GFC) had a damaging impact on each sector, with the Health & Education sector demonstrating the most impressive recovery post-GFC, and the utilities sector recording a dramatic increase in bankruptcies post-GFC. At another extreme of the spectrum, Van and Nguyen considered that competitive context, social influences, the understanding of managers about corporate social responsibility (CSR), and the internal environment of companies are the four drivers of CSR. The authors

also argued that in the four drivers, competitive context has the strongest impact on adopting CSR. Third, last but not least, various papers focus on an important aspect of public finance. For an example, Pham, Pham, and Ly documented the effect of double taxation treaties on the bilateral trade of Vietnam with ASEAN member states, thereby making an extensive comparison with its EU partner countries. Their findings indicate the significant contributions of the tax treaties to Vietnam's trade performance, not exclusively with ASEAN but also with EU partner countries. In addition, regarding public finance for Vietnam, Nguyen, Vo, Ho, and Vo investigated the contribution of fiscal decentralisation to economic growth across provinces in Vietnam. For the first time in Vietnam, the fiscal decentralisation index together its two subcomponents, including

fiscal importance and fiscal autonomy, are developed. Findings from this paper indicate that while fiscal importance and an overall level of fiscal decentralisation have provided negative impact on provincial economic growth, fiscal autonomy has a positive impact on economic growth across provinces in Vietnam.

A Farewell to Alms Gregory

Clark 2008-12-29 Why are

some parts of the world so rich and others so poor? Why did the Industrial Revolution--and the unprecedented economic growth that came with it--occur in eighteenth-century England, and not at some other time, or in some other place? Why didn't industrialization make the whole world rich--and why did it make large parts of the world even poorer? In A Farewell to Alms, Gregory Clark tackles these profound questions and suggests a new and provocative way in which culture--not exploitation, geography, or resources--explains the wealth, and the poverty, of nations. Countering the prevailing theory that the Industrial Revolution was sparked by the sudden development of stable political, legal, and economic institutions in seventeenth-century Europe, Clark shows that such institutions existed long before industrialization. He argues

instead that these institutions gradually led to deep cultural changes by encouraging people to abandon hunter-gatherer instincts-violence, impatience, and economy of effort-and adopt economic habits-hard work, rationality, and education. The problem, Clark says, is that only societies that have long histories of settlement and security seem to develop the cultural characteristics and effective workforces that enable economic growth. For the many societies that have not enjoyed long periods of stability, industrialization has not been a blessing. Clark also dissects the notion, championed by Jared Diamond in *Guns, Germs, and Steel*, that natural endowments such as geography account for differences in the wealth of nations. A brilliant and sobering challenge to the idea that poor societies can be economically developed through outside

intervention, *A Farewell to Alms* may change the way global economic history is understood.

Macroeconomics Olivier Blanchard 2021 This print textbook is available for students to rent for their classes. The Pearson print rental program provides students with affordable access to learning materials, so they come to class ready to succeed. For intermediate courses in economics. A unified view of the latest macroeconomic events In *Macroeconomics*, Blanchard presents an integrated, global view of macroeconomics, enabling students to see the connections between goods markets, financial markets, and labor markets worldwide. Organized into two parts, the text contains a core section that focuses on short-, medium-, and long-run markets and two major extensions that offer more in-depth coverage of the issues at hand. From the major economic crisis that

engulfed the world in the late 2000s, to monetary policy in the US, to the problems of the Euro area, and growth in China, the text helps students make sense not only of current macroeconomic events but also of those that may unfold in the future. Integrated, detailed boxes in the 8th Edition have been updated to convey the life of macroeconomics today, reinforce lessons from the models, and help students employ and develop their analytical and evaluative skills. Also available with MyLab Economics By combining trusted author content with digital tools and a flexible platform, MyLab personalizes the learning experience and improves results for each student.
