**Sexually Transmitted Diseases** David Goldmeier 2012-12-06 "Conclusions are usually considered guesses" Henry S. Haskins, American writer in *Meditations in Wall Street* Students' minds, whether undergraduate or postgraduate, soon become stale when faced with lectures or even not so large textbooks. Supplementing lecture notes and textbooks with multiple-choice questions, therefore, attunes the mind to this style of examination which the student will certainly meet and yet also relieves the tedium and monotony of the conventional learning route. This multiple-choice textbook, therefore, should be used side by side with lecture notes, textbooks and clinical teaching material. The book covers a wide field of genitourinary medicine. This necessarily overlaps with general medicine, urology, bacteriology, virology, psychiatry, sexual medicine, immunology and proctology. With regard to immunology, a basic set of teaching questions are included so that HIV disease may be more easily understood without recourse to immunology textbooks. The answers to the questions are not given in a uniform style. This is partly to relieve monotony, and partly because some questions need no explanation, others need a prose answer and yet others are best answered by a point-by-point explanation. We also provide references for those interested. There is some overlap between questions but only enough, we hope, to facilitate learning but not produce somnolence.

**A First-Rate Madness** Nassir Ghaemi 2011-08-04 The New York Times bestseller "A glistening psychological history, faceted largely by the biographies of eight famous leaders . . ." –The Boston Globe "A provocative thesis . . . Ghaemi's book deserves high marks for original thinking." –The Washington Post "Provocative, fascinating." –Salon.com Historians have long puzzled over the apparent mental instability of great and terrible leaders alike: Napoleon, Lincoln, Churchill, Hitler, and others. In *A First-Rate Madness*, Nassir Ghaemi, director of the Mood Disorders Program at Tufts Medical Center, offers a myth-shattering exploration of the powerful connections between mental illness and leadership and sets forth a controversial, compelling thesis: The very qualities that mark those with mood disorders also make for the best leaders in times of crisis. From

the importance of Lincoln's "depressive realism" to the lackluster leadership of exceedingly sane men as Neville Chamberlain, A First-Rate Madness overturns many of our most cherished perceptions about greatness and the mind.

Virus Mania Torsten Engelbrecht 2021-04-22 "The book 'Virus Mania' has been written with the care of a master-craftsman, courageously evaluating the medical establishment, the corporate elites and the powerful government funding institutions." Wolfgang Weuffen, MD, Professor of Microbiology and Infectious Epidemiology "The book 'Virus-Wahn' can be called the first work in which the errors, frauds and general

misinformations being spread by official bodies about doubtful or non-virus infections are completely exposed." Gordon T. Stewart, MD, professor of public health and former WHO advisor - - - The population is terrified by reports of so-called COVID-19, measles, swine flu, SARS, BSE, AIDS or polio. However, the authors of "Virus Mania," investigative journalist Torsten Engelbrecht, Dr. Claus Köhnlein, MD, Dr. Samantha Bailey, MD, and Dr. Stefano Scoglio, BSc PhD, show that this fearmongering is unfounded and that virus mayhem ignores basic scientific facts: The existence, the pathogenicity and the deadly effects of these agents have never been proven. The book "Virus Mania" will also outline how modern medicine uses dubious indirect lab tools claiming to prove the existence of viruses such as antibody tests and the polymerase chain reaction (PCR).

The alleged viruses may be, in fact, also be seen as particles produced by the cells themselves as a consequence of certain stress factors such as drugs. These particles are then "picked up" by antibody and PCR tests and mistakenly interpreted as epidemic-causing viruses. The authors analyze all real causes of the illnesses named COVID-19, avian flu, AIDS or Spanish flu, among them pharmaceuticals, lifestyle drugs, pesticides, heavy metals, pollution, malnutrition and stress. To substantiate it, the authors cite dozens of highly renowned scientists, among them the Nobel laureates Kary Mullis, Barbara McClintock, Walter Gilbert and Sir Frank Macfarlane Burnet as well as microbiologist and Pulitzer Prize winner René Dubos, and it presents more than 1,400 solid scientific references. The topic of "Virus Mania" is of pivotal significance. Drug makers and top scientists rake in enormous sums of money and the media boosts its audience ratings and circulations with sensationalized reporting (the coverage of the "New York Times" and "Der Spiegel" are specifically analyzed). The enlightenment about the real causes and true necessities for prevention and cure of illnesses is falling by the wayside. For more reviews, see the older edition of "Virus Mania"
