Coalition Command and Control David S. Alberts 1994 Peace operations differ in significant ways from traditional combat missions. As a result of these unique characteristics, command arrangements become far more complex. The stress on command and control arrangements and systems is further exacerbated by the

mission's increased political sensitivity. Current JTF headquarters need to be augmented in a number of different ways to make them more effective in a coalition peace operations environment.

Lessons from Bosnia Larry Wentz 2002 "This book tells the story of the challenges faced and innovative actions taken by NATO and U.S.

personnel to ensure that IFOR and Operation Joint Endeavor were military successes. A coherent C4ISR lessons learned story has been pieced together from firsthand experiences, interviews of key personnel, focused research, and analysis of lessons learned reports provided to the National Defense University team. The book provides numerous examples that support the observation that DoDs vision is working for the Bosnia operation." Anthony M. Valletta (Acting) Assistant Secretary of Defense Climate Design Gerhard Hausladen 2005-01-01 How does the facade design of a building influence climate design? How can planners guarantee flexibility of usage, determine the technical strategy and select from available systems accordingly? This volume offers a comprehensive approach to energy efficient building design in addition to providing practical planning aids for a wide selection of building types. Defending Cyberspace and Other Metaphors

Martin C. Libicki 2002-12-01 Information warfare, as any casual observer of the Pentagon can attest, remains a hot-button topic in the military community. Thus does war follow commerce into cyberspace, pitting foes against one another for control of this clearly critical high ground. But does this facile comparison have a basis in reality? In this iconoclastic spirit, the six essays in this book are characterized by a continuing search for the meaning of information warfare. Information Dominance Martin C. Libicki 1997 Information dominance may be defined as superiority in the generation, manipulation, and use of information sufficient to afford its possessors military dominance. It has three sources: Command and control that permits everyone to know where they (and their cohorts) are in the battlespace, and enables them to execute operations when and as quickly as necessary; Intelligence that ranges from knowing the enemy's dispositions to knowing the location of enemy assets in real-time with sufficient

precision for a one-shot kill; information warfare that confounds enemy information systems at various points (sensors, communications, processing, and command), while protecting one's own. Technical means, nevertheless, are no substitute for information dominance at the strategic level: knowing oneself and one's enemy; and, at best, inducing them to see things as one does.

Guidelines on Firewalls and Firewall Policy

Karen Scarfone 2010-03 This updated report provides an overview of firewall technology, and helps organizations plan for and implement effective firewalls. It explains the technical features of firewalls, the types of firewalls that are available for implementation by organizations, and their security capabilities. Organizations are advised on the placement of firewalls within the network architecture, and on the selection, implementation, testing, and

management of firewalls. Other issues covered in detail are the development of firewall policies, and recommendations on the types of network traffic that should be prohibited. The appendices contain helpful supporting material, including a glossary and lists of acronyms and abbreviations; and listings of in-print and online resources. Illus.

Practical File System Design with the BE File System

Dominic Giampaolo 1999 This is the new guide to the design and implementation of file systems in general, and the Be File System (BFS) in particular. This book covers all topics related to file systems, going into considerable depth where traditional operating systems books often stop. Advanced topics are covered in detail such as journaling, attributes, indexing and query processing. Built from scratch as a modern 64 bit, journaled file system, BFS is the primary file system for the Be Operating System (BeOS), which was designed for high performance multimedia applications. You do not have to be a kernel architect or file system engineer to use

Practical File System Design. Neither do you have to be a BeOS developer or user. Only basic knowledge of C is required. If you have ever wondered about how file systems work, how to implement one, or want to learn more about the Be File System, this book is all you will need. *

- Review of other file systems, including Linux ext2, BSD FFS, Macintosh HFS, NTFS and SGI's XFS.
- * Allocation policies for placing data on disks and discussion of on-disk data structures used by BFS
- * How to implement journaling
- * How a disk cache works, including cache interactions with the file system journal
- * File system performance tuning and benchmarks comparing BFS, NTFS, XFS, and ext2
- * A file system construction kit that allows the user to experiment and create their own file systems

Command, Control, and the Common Defense C.

Kenneth Allard 1996 One of the challenges facing the writer is keeping up with developments in the information age. While *Command, Control, and the Common Defense* provides a historical

perspective on a contemporary problem, it was written in the late 1980s; since then, the end of the Cold War and the American experience in the Gulf War have provided some fundamentally new perspectives of their own. Re-written history has its own pitfalls; a better solution was to leave the original content intact and to add as an epilogue a chapter which originally appeared in a 1995 anthology on the Gulf War. Both works have, of course, been edited for consistency. Finally, there is reason to ponder in the light of more contemporary developments one of the major points in that original work: that the tight integration demanded by emerging command and control technologies often runs afoul of existing command structures and theories of warfare. As I completed the revisions to this edition while serving on special assignment with the NATO Implementation Force in Bosnia, there were daily reminders of the truth of that statement.

Language Experience in Second Language

Speech Learning Ocke-Schwen Bohn 2007-01-17

This stimulating collection of articles from leading international researchers provides a state-of-the-art overview of core issues in second language speech perception and production. Aimed at phoneticians, speech scientists, psycholinguists, applied linguists, and pedagogical specialists, it presents engaging discussions of fundamental

problems and controversies within the field, as well as new empirical findings arising from a variety of methodological approaches. Its twenty chapters, inspired by the ground-breaking work of James E. Flege, address such topics as the theoretical underpinnings of second language speech learning; the nature and etiology of foreign accents; the effects of age, experience, and training; speech intelligibility; and the acquisition of vowels, consonants, tone, and prosody. This volume will serve as a valuable resource, not only for researchers, but for anyone wishing to gain an understanding of an area of linguistics that is rapidly growing in importance. *Mapping Design Research* Simon Grand 2012 Summary: A collection of some 40 international texts from the period after 1960 mirrors the principal developmental phases of design research in particular and scientific research in general.

Non-Native Prosody Jürgen Trouvain 2007-01-01
Non-Native Prosody: Phonetic Description and

Teaching Practice is a response to the increasing interest in the field of prosody in second language acquisition and teaching. The volume presents an overview of the state of the art in second language prosody learning and teaching and brings together linguistic research on the description and modelling of non-native prosodic structures with L2 teaching methods and practices. The first part comprises descriptions of non-native prosodic structures (including intonation, stress and speech rhythm) as well as methodological considerations of research in second language acquisition written by experts in the field. These overviews of current theoretical models and results from empirical studies are presented in a format accessible to language teachers. In the second part, some of the leading teaching practitioners and developers of phonological learning materials present a variety of methods and exercises in the area of prosody. The accompanying audio examples on a CD-ROM make a useful addition illustrating the

descriptions and exercises for various target and source languages.

Design Research Now Ralf Michel 2012-12-21 Design is becoming a recognised academic discipline, and design research is the driving force behind this transformation. Design Research Now – Essays and Selected Projects charts the field of design research with introductory essays and selected research projects. The authors of the essays, all leading international design scholars, stake out positions on the most important issues of design research.

They locate the significance of design research at the interface with technological development, describe what makes it a necessary ingredient of the continued development of the design disciplines, and assign it a seminal role in the relevant developments of society. The essays are supplemented by the presentation of recently completed research projects from universities in the Netherlands, the UK and Italy.

Second Language Pronunciation John M. Levis 2022-03-29 Practical resources designed to help language educators apply the latest research and most effective pedagogical methods to classroom pronunciation instruction In *Second Language Pronunciation: Bridging the Gap Between Research and Teaching*, a team of distinguished researchers and educators delivers an incisive and practical approach to evidence-based pronunciation instruction in second language classrooms. Developed for language teachers who want to incorporate and implement the most effective pedagogical methods in their language

instruction, this edited volume offers 15 essays that connect the latest research with practical applications in the classroom. In addition to exploring recent but less well-known methods—like High Variability Phonetic Training, discourse-based teaching, communicative classrooms, and technology-based methods—these chapters are unified in bringing theory to bear on practical questions faced by language teachers. The chapters follow a standard format, moving from critical research issues to pedagogical implications, and practical resources to equip language teachers, scholars, administrators, and teachers-in-training with the tools they require to develop their students' pronunciation abilities. Readers will also find: A thorough introduction to using empirical evidence to guide pronunciation instruction in second language students Comprehensive explorations of the integration of pronunciation instruction into second language education Practical discussions of perception training in

pronunciation instruction and the importance of L2 segmental and suprasegmental contrasts in pronunciation learning In-depth examinations of classroom research for pronunciation and the use of technology to explore L2 pronunciation Perfect for upper-level undergraduate and graduate students studying TESOL, applied linguistics, and second language acquisition, *Second Language Pronunciation: Bridging the Gap Between Research and Teaching* will also earn a place in the libraries of researchers, scholars, and teachers of language and education.

Performative Urbanism Sophie Wolfrum 2015
The concept of relational space in urbanism—understanding the space of the city as produced by society—is connected with an understanding of architecture unfolding in situations. Urban space is induced by architecture, space is produced while experiencing architecture within a situation. There is a dialectical interplay between architectonic material (intra-architectonic reality) and usage and action (urban reality). Thus, an

architectonic situation can be interpreted as performative in the sense of performativity as it has emerged in the discourse over the last decade. The everyday urban life of the city, with all its potential and conflicts, is taken into consideration. Analyzing the urban is not enough. This discourse is about Urban Design. Is architectural design one part, and the actualization of architecture in a performative incident another? Does Urban Design need different practices?

Discourse Intonation in L2 Dorothy M. Chun 2002-04-08 Intonation, rhythm, and general "melody" of language are among the first aspects of speech that infants attend to and produce themselves. Yet, these same features are among the last to be mastered by adult L2 learners. Why is this, and how can L2 learners be helped? This book first presents the latest linguistic theories of intonation, in particular, how intonation functions in discourse not only to signal sentence types and attitudinal meanings

but also to provide turn-taking and other conversational cues. The second part of the book examines the research in applied linguistics on the acquisition of L2 phonology and intonation. The third section offers practical applications of how to incorporate the teaching of intonation into L2 instruction, with a focus on using new speech technologies. The accompanying CD-ROM makes a unique addition in allowing for simultaneous audio playback and visual display of the pitch contours of utterances contained in the book. Users can start or stop the playback at any point in the utterance and can observe first-hand how such visual and audio representations could be useful for L2 learners.

Methods in Empirical Prosody Research

Stefan Sudhoff 2006-01-01 This book contains a collection of cutting-edge papers on methodological aspects of prosody research. Current approaches to the gathering, treatment, and interpretation of prosodic data are discussed by experts in the field, illustrated by their own

empirical research. Contributions focus on the choice and measurement of prosodic parameters, the establishment of prosodic categories, annotation structures for spoken-language data, and experimental methods for production and perception studies (including the construction of materials, modes of presentation, online vs. offline tasks, judgement scales, data processing, and statistical evaluation). The volume will serve

as a handbook linking data collection and interpretation, allowing researchers in linguistics and related fields to make more informed decisions concerning their empirical work in prosody.
