Information and Communication Technology in Physical Education Dr. Rakesh Gupta 2021-05-19 Information and Communication Technology (ICT) is an extended term for Information Technology (IT) which stresses the role of unified communications. The term ICT is also used to refer to the convergence of audio-visual and telephone networks with computer networks through a single cabling or link system. There are large economic incentives (huge cost savings due to elimination of the telephone network) to merge the telephone network with the computer network system using a single unified system of cabling, signal distribution and management. However, ICT has no universal definition, as "the concepts, methods and applications involved in ICT are constantly evolving on an almost daily basis". The broadness of ICT covers any product that will store, retrieve, manipulate, transmit or receive information electronically in a digital form, e.g. personal computers, digital television, email, robots. For clarity, Zuppo provided an ICT hierarchy where all levels of the hierarchy "contain some degree of commonality in that they are related to technologies that facilitate the transfer of information and various types of electronically mediated communications". Skills Framework for the Information Age is one of many models for describing and managing competencies for ICT professionals for the 21st century. Physical education, also known as Phys Ed., PE, Gym or Gym class, and known in many Commonwealth countries as physical training or PT, is an educational course related of maintaining the human body through physical exercises (i.e. calisthenics). It is taken during primary and secondary education and encourages psychomotor learning in a play or movement exploration setting to promote health. Information and Communication Technologies (ICT) in the field of physical education by the professed and the students. Finally the main problems related to the use of these technologies in classrooms are analyzed. All this in order t to shed light on a very topical issue regarding the education of our youth. Studies show that ICTs are increasingly present in the field of physical education, but much remains to be done to make an effective use of them in education.

Aesthetic Animism David Jhava Johnston 2016-06-03 A poetics appropriate to the digital era that connects digital poetry to traditional poetry's concerns with being. This book offers a decoder for some of the new forms of poetry enabled by digital technology. Examining many of the strange technological vectors converging on language, it proposes a poetics appropriate to the digital era while connecting digital poetry to traditional poetry's concerns with being (a.k.a. ontological implications). Digital poetry, in this context, is not simply a descendent of the book. Digital poems are not necessarily "poems" or written by "poets"; they are found in ads, conceptual art, interactive displays, performative projects, games, or apps. Poetic tools include algorithms, browsers, social media, and data. Code blossoms into poetic objects and poetic proto-organisms. Introducing the terms TAVs (Textual-Audio-Visuals) and TAVITS (Textual-Audio-Visual-Interactive), Aesthetic Animism theorizes a relation between scientific method and literary analysis; considers the temporal implications of animation software; and links software studies to creative writing. Above all it introduces many examples of digital poetry within a playful yet considered flexible taxonomy. In the future imagined here, digital poets program, sculpt, and nourish immense immersive interfaces of semi-autonomous word ecosystems. Poetry, enhanced by code and animated by sensors, reengages themes active at the origin of poetry: animism, agency, consciousness. Digital poetry will be perceived as living, because it is living.
