### **The Analysis of Directional Time Series: Applications to Wind**

**Speed and Direction** Jens

Breckling 2012-12-06 Given a

series of wind speeds and

directions from the port of

Fremantle the aim of this

monograph is to detect general

weather patterns and seasonal characteristics. To separate the daily land and sea breeze cycle and other short-term disturbances from the general wind, the series is divided into a daily and a longer term, synoptic component. The latter is related to the atmospheric pressure field, while the former is studied in order i) to isolate particular short-term events such as calms, storms and oscillating winds, and ii) to determine the land and sea breeze cycle which dominates the weather pattern for most of the year. All these patterns are described in detail and are related to the synoptic component of the data. Two

time series models for directional data and a new measure of angular association are introduced to provide the basis for certain parts of the analysis.
