American Capitals Christian Montès 2014-01-10 State capitals are an indelible part of the American psyche, spatial representations of state power and national identity. Learning them by heart is a rite of passage in grade school, a pedagogical exercise that emphasizes the importance of committing place-names to memory. But geographers have yet to analyze state capitals in any depth. In *American Capitals*, Christian Montès takes us on a well-researched journey across America—from Augusta to Sacramento, Albany to Baton Rouge—shedding light along the way on the historical circumstances that led to their appointment, their success or failure, and their evolution over time. While all state capitals have a number of characteristics in common—as symbols of the state, as embodiments of political power and decision making, as public spaces with private interests—Montès does not interpret them through a single lens, in large part because of the differences in their spatial and historical evolutionary patterns. Some have remained small, while others have evolved into bustling

metropolises, and Montès explores the dynamics of change and growth. All but eleven state capitals were established in the nineteenth century, thirty-five before 1861, but, rather astonishingly, only eight of the fifty states have maintained their original capitals. Despite their revered status as the most monumental and historical cities in America, capitals come from surprisingly humble beginnings, often plagued by instability, conflict, hostility, and corruption. Montès reminds us of the period in which they came about, “an era of pioneer and idealized territorial vision,” coupled with a still-evolving American citizenry and democracy.

Understanding Cultural Geography Jon Anderson 2015-03-24
Understanding Cultural Geography: Places and Traces offers a comprehensive introduction to perhaps the most exciting and challenging area of human geography. By focusing on the notion of 'place' as a key means through which culture and identity is grounded, the book showcases the broad range of theories, methods and practices used within the discipline. This book not only

introduces the reader to the rich and complex history of cultural geography, but also the key terms on which the discipline is built. From these insights, the book approaches place as an 'ongoing composition of traces', highlighting the dynamic and ever-changing nature of the world around us. The second edition has been fully revised and updated to incorporate recent literature and up-to-date case studies. It also adopts a new seven section structure, and benefits from the addition of two new chapters: Place and Mobility, and Place and Language. Through its broad coverage of issues such as age, race, scale, nature, capitalism, and the body, the book provides valuable perspectives into the cultural relationships between people and place. Anderson gives critical insights into these important issues, helping us to understand and engage with the various places that make up our lives. Understanding Cultural Geography is an ideal text for students being introduced to the discipline through either undergraduate or postgraduate degree courses. The book outlines how the theoretical ideas, empirical foci and methodological techniques of cultural geography illuminate and make sense of the places we inhabit and contribute to. This is a timely update on a highly successful text that incorporates a vast foundation of knowledge; an invaluable book for lecturers and students.

Geography Education for Global Understanding Ali Demirci 2018-04-26 This book presents the core concepts of geographical education as a means of understanding global issues from a spatial perspective. It treats education, supported by high standards, approaches, methodologies, and resources, as essential in exploring the interactions of the world's human and environmental

systems at local, regional, and global scales embedded in the nature of the discipline of geography. It covers topics such as climate change, sustainable development goals, geopolitics in an uncertain world, global crisis, and population flows, which are of great interest to geography researchers and social sciences educators who want to explore the complexity of contemporary societies. Highly respected scholars in geography education answer questions on key topics and explain how global understanding is considered in K-12 education in significant countries around the globe. The book discusses factors such as the Internet, social media, virtual globes and other technological developments that provide insights into and visualization – in real time – of the intensity of relationships between different countries and regions of the earth. It also examines how this does not always lead to empathy with other political, cultural, social and religious values: terrorism threats and armed conflicts are also essential features of the global world. This book opens the dialogue for global understanding as a great opportunity for teachers, educators, scholars and policy makers to better equip students and future citizens to deal with global issues.

The Geography of Names Gwilym Lucas Eades 2016-07-15
This book examines geographical names, place-names, and toponymy from philosophical and cultural evolutionary perspectives. Geographical name-tracking-networks (Geo-NTNs) are posited as tools for tracking names through time and across space, and for making sense of how names evolve both temporally and spatially. Examples from North and South American indigenous groups, the Canadian arctic, Wales, England, and the Middle East are brought into a theoretical framework for making sense of aspects of place-naming practices, beliefs, and systems. New geographical tools such as geographic information systems (GIS) and global positioning systems (GPS) are demonstrated to be important in the production and maintenance of robust networks for keeping names and their associated meanings viable in a rapidly changing world where place-naming is being taken up increasingly in social media and other new mapping platforms. The Geography of Names makes the case that geographical names are transmitted memetically (i.e. as cultural

units, or memes) through what Saul Kripke called communication chains. Combining insights from Kripke with views of later Wittgenstein on language and names as being inherently spatial, the present work advances theories of both these thinkers into an explicitly geographical inquiry that advances philosophical and practical aspects of naming, language, and mapping.

The Making of Geography as a Secondary School Subject
John Mortimer 2021-06-02 No work has ever been produced previously that shows how historically geography has been constructed as a subject for the senior years of secondary schooling in Western Australia from 1917 to 1997. In doing so, this book contributes to the existing corpus of international research on the history of curriculum and particularly the history of geography as a senior secondary school subject. Much of it is based on primary sources, including the textbooks and atlases used, along with syllabus manuals and geography examination papers. It also provides a framework for investigating the construction of senior secondary school geography curricula in other constituencies, and could act as a model for engaging in further research in curriculum history for other school subjects state-wide, nationally and internationally. The book also makes an important contribution to the fields of curriculum design, curriculum development and curriculum innovation. It will be of great interest to historians of education, comparative educationists, education leaders, policy makers and librarians.

Learning Progressions in Geography Education
Osvaldo Muñiz Solari 2016-07-30 This book informs an international audience of teachers, scholars and policymakers about the development of learning progressions for primary and secondary geography

education in various countries and regions of the world. The book represents an important contribution to learning progressions research and practice. The different chapters explore how curriculum standards and frameworks in different countries portray progress and sophistication in the learning of geography. The book compares educational systems and how teachers and curriculum developers use the concept of “learning progression” to guide educational practices. As an approach to educational research, learning progressions offer considerable potential for understanding how children develop understanding of geographic concepts and practices across grade bands and in relation to national geography standards. The book analyzes the general conditions of learning progressions within the context of a globalized world. Important themes are addressed such as: knowledge acquisition in formal education; measuring learning progressions in informal settings; learning progressions for one curriculum standard or several standards; conditions to assess progression in the learning of facts, concepts, and skills; and multiple pathways for understanding or learning geography. The contributing authors are experienced scientists in the field from all around the world giving specific insights into the practices of their countries. The book appeals to K-12 teachers, school administrators, policymakers, researchers in geography education, professors and lecturers at universities around the world.

Educational Policy Borrowing in China Charlene Tan 2016-02-22 For over a decade, Mainland China has been embarking on an ambitious nation-wide education reform ('New Curriculum Reform') for its basic education. The reform reflects China's propensity to borrow selected educational policies from elsewhere, particularly North America and Europe. Chinese scholars have used a local proverb "the West wind has overpowered the East wind" to describe this phenomenon of 'looking West'. But what do we mean by educational policy borrowing from the West? What are the educational policies in China's new curriculum reform that are perceived to be borrowed from the West? To what extent have the borrowed educational policies in China's new curriculum reform been accepted, modified, and rejected by the various educational stakeholders? How does culture influence the various educational stakeholders in China in interpreting and mediating educational policy borrowing from the West? How do the findings of this study on China's education reform inform and add to the existing theories on and approaches to on cross-cultural educational policy borrowing? This book answers the above questions by critically discussing China's policy borrowing from the West through its current reform for primary and secondary education. It presents the latest in-depth research findings from a three-year empirical study (2013-2015) with school principals, teachers, students and other educational stakeholders across China. This study offers new insights into China's educational policy borrowing from the West and international implications on cross-cultural educational transfer for academics, policymakers and educators.

Current Topics in Czech and Central European Geography Education Petra Karvánková 2016-10-19 This book discusses current challenges related to teaching geography, mainly at the secondary school and higher education level. Focusing on a range of current topics, different methods, techniques, materials, applications, and approaches to geography education with a regional Central European perspective, the book makes an original contribution to the field. Most of the chapters aims at the practical development of the themes such as geography curriculum (Part I), global education, inquiry-based education, project-based learning, case studies, powerful teaching (Part II), using of

information and communication technologies (Part III) in geography teaching. The final part (Part IV) covers some geopolitical, and socio-geographical aspects of the aforementioned Central European former communist countries from the point of view how to teach them with various methods. Therefore, the book can appeal to many geography or science students, researchers and educators studying geography education around the world.
