A Dissection Guide and Atlas to the Mink David G. Smith 2020 This full-color dissection manual is intended to provide an introduction to the anatomy of the mink for biology, zoology, nursing, or preprofessional students who are taking a laboratory course in anatomy and physiology or basic vertebrate anatomy. Features: Multiple images of the muscle, skeletal, and organ systems provide a complete picture of the layers of mink anatomy. Detailed instructions allow students to efficiently and accurately perform all of the dissections. Superior quality, completely labeled, full-color photographs and illustrations offer excellent visual references. The text is clearly written, and dissection instructions are set apart in boxes to aid the students in the lab. Informative tables summarize key information, and student objectives establish the purpose of each chapter and lab. The dissection guide is loose-leaf and three-hole drilled for convenience in the laboratory. Because prepared mink skeletons are not always available, the cat skeleton is utilized in the skeletal system chapter along with pictures of mink structures, as appropriate.

Biology Laboratory Manual Darrell Vodopich 2007-02-05 This laboratory manual is designed for an introductory majors biology course with a broad survey of basic laboratory techniques. The experiments and procedures are simple, safe, easy to perform, and especially appropriate for large classes. Few experiments require a second class-meeting to complete the procedure. Each exercise includes many photographs, traditional topics, and experiments that help students learn about life. Procedures within each exercise are numerous and discrete so that an exercise can be tailored to the needs of the students, the style of the instructor, and the facilities available.

The Animal Lover's Guide to Changing the World Stephanie Feldstein 2018-06-05 "This book belongs on every animal lover's shelf—and it's a particularly great gift for young people who are on fire to save animals but are unsure where to start. Hooray!!" —Sy Montgomery, author of *The Good Good Pig* and *The Soul of an Octopus* *The Animal Lover's Guide to Changing the World* is the inspiring, accessible, and empowering book for everyone who loves animals and wants to live a more animal-friendly life, even if they aren't ready to join a movement or give up bacon. With more than 7.5 billion people on the planet, wildlife is going extinct at the fastest rate since the dinosaurs. Three to four million dogs and cats are killed in shelters every year; billions of chickens, pigs, and cows are killed for food; and countless animals are killed in research labs or their habitat. The numbers are daunting, but there's good news too! Even one person truly can make a difference without breaking the bank. With Stephanie Feldstein's straightforward and encouraging guidance, readers will learn how to take action to create a better world for the animals we love. It starts with changes as simple as taking a shorter shower, skipping meat once a week, wearing "this" not "that," and extends all the way to online activism and politics. The animals need us; so let's get on with some world changing!

Texas Aquatic Science Rudolph A. Rosen 2014-11-19 This classroom resource provides clear, concise scientific information in an understandable and enjoyable way about water and aquatic life. Spanning the hydrologic cycle from rain to watersheds, aquifers to springs, rivers to estuaries, ample illustrations promote understanding of important concepts and clarify major ideas. Aquatic science is covered comprehensively, with relevant principles of chemistry, physics, geology, geography, ecology, and biology included throughout the text. Emphasizing water sustainability and conservation, the book tells us what we can do personally to conserve for the future and presents job and volunteer opportunities in the hope that some students will pursue careers in aquatic science. Texas Aquatic Science, originally developed as part of a multi-faceted education project for middle and high school students, can also be used at the college level for non-science majors, in the home-school environment, and by anyone who educates kids about nature and water. The project's home on the web can be found at <http://texasaquaticscience.org>
