**Self-Help and Civic Culture** Anne B. Rodrick 2019-06-04 First published in 2004. The nineteenth century witnessed a flowering of the culture of self-improvement that was reflected in a plethora of institutes, societies and journals that sprang up across Britain with the goal of spreading knowledge and learning to a wide spectrum of society. The prophets of self-improvement believed that not only was self-improvement a laudable goal in its own right, but more importantly, it would contribute towards a general improvement in society. In an age in which direct participation in the political processes was restricted to a minority, education and self-improvement could act as an alternative force by creating a sophisticated and knowledgeable population. In other words, self-improvement was also seen as a way of creating active and responsible citizens. Focusing on the city of Birmingham, and drawing on both local and national sources, *Self Help and Civic Culture* explores the changing nature of self improvement and citizenship in Victorian Britain. By approaching the concept of citizenship from a new perspective, provincial identity and its relationship to wider ideas of 'Englishness' and 'Britishness', a distinct ideal of citizenship is elucidated that adds further nuance to current scholarship. By drawing together various issues of citizenship, self-improvement, class and political power, this work brings a new perspective to the on-going attempts to determine who could claim the full rights, duties, privileges and responsibilities of the larger social body, thus illuminating the relationship between culture and power in nineteenth century England.

**XCOR, Developing the Next Generation Spaceplane** Erik Seedhouse 2016-03-29 Employing the same informational approach Erik Seedhouse used in "SpaceX" and "Bigelow Aerospace", this new book familiarizes space enthusiasts with the company XCOR Aerospace and examines the design of the two-seater Lynx. The new spaceplane's low weight and high octane fuel confer important advantages, such as direct runway launches and the ability to fly several times per day. Over the last 15 years, XCOR has developed and built 13 different rocket engines, built and flown two manned rocket-powered aircraft and has accumulated over 4,000 engine firings and nearly 500 minutes of run time on their engines. This book serves as a go-to reference guide for suborbital scientists and those seeking to learn how one company has found success. Additionally, it describes the medical and training requirements for those flying on board the Lynx and the related critical roles of the astronaut trainers and a new breed of commercial space pilots. The end result is a thorough chronicle of the development of rocket propulsion, avionics, simulator and ground support operations being put into play by XCOR with the Lynx.

**Predicting Rainfall Erosion Losses** Walter H. Wischmeier 1978 The Universal Soil Loss Equation (USLE) enables planners to predict the average rate of soil erosion for each feasible alternative combination of crop system and management practices in association with a specified soil type, rainfall pattern, and topography. When these predicted losses are compared with given soil loss tolerances, they provide specific guidelines for effecting erosion control within specified limits. The equation groups the numerous interrelated physical and management parameters that influence erosion rate under six major factors whose site-specific values can be expressed numerically. A half century of erosion research in many States has supplied information from which at least approximate values of the USLE factors can be obtained for specified farm fields or other small erosion prone areas throughout the United States. Tables and charts presented in this handbook make this information readily available for field use. Significant limitations in the available data are identified.
