Provider-based Entities Gina M. Reese 2017 This book serves as a comprehensive guide to provider-based clinics, from qualifying under CMS, to unique billing and coding rules, and the business decisions behind owning or acquiring these clinics. It will help readers sort through the complex regulations relevant to this unique provider type, and provide insight into recent changes, such as the introduction of Modifier -PO. CMS is looking to implement the Section 603 provisions of the Bipartisan Budget Act of 2015 regarding off-campus, provider-based departments (PBD) by January 1, 2017, according to the 2017 OPBS proposed rule. The agency is proposing to pay the nonfacility or office Medicare Physician Fee Schedule (MPFS) amount to the performing/supervising physician and preclude hospitals from

billing on a UB-04 form or receiving OPPS payment for services performed at these locations for 2017, but plans to explore other options for 2018 and beyond. Physicians would be paid at the higher nonfacility rate of the MPFS, but only hospitals that have employed or contracted physicians that reassign their billing to the hospital would get paid under the MPFS for these services. Hospitals would be able to bill claims on CMS-1500 forms for physicians who have already reassigned their billing to the hospital, as in the case of employed physicians. Otherwise, hospitals would have the option of enrolling the location as the type of provider or supplier it wishes to bill to meet the requirements of that payment system (e.g., ambulatory surgery center or group practice).

ICD-10-CM Official Guidelines for Coding and Reporting - FY 2021 (October 1, 2020 - September 30, 2021) Department Of Health And Human Services 2020-09-06 These guidelines have been approved by the four organizations that make up the Cooperating Parties for the ICD-10-CM: the American Hospital Association (AHA), the American Health Information Management Association (AHIMA), CMS, and NCHS. These guidelines are a set of rules that have been developed to accompany and complement the official conventions and instructions provided within the ICD-10-CM itself. The instructions and conventions of the classification take precedence over guidelines. These guidelines are based on the coding and sequencing instructions in the Tabular List and Alphabetic Index of ICD-10-CM, but provide additional instruction. Adherence to these guidelines when assigning ICD-10-CM diagnosis codes is required under the Health Insurance Portability and Accountability Act (HIPAA). The diagnosis codes (Tabular List and Alphabetic Index) have been adopted under HIPAA for all healthcare settings. A joint effort between the healthcare provider and the coder is essential to achieve complete and accurate documentation, code assignment, and reporting of diagnoses and procedures. These guidelines have been developed to assist both the healthcare provider and the coder in identifying those diagnoses that are to be reported. The importance of consistent, complete documentation in the medical record cannot be overemphasized. Without such documentation accurate coding cannot be achieved. The entire record should be reviewed to determine the specific reason for the encounter and the conditions treated.

Continuous Ambulatory Peritoneal

Dialysis G.R. Catto 2012-12-06 For more than a generation haemodialysis has been the principal method of treating patients with both acute and chronic renal failure. Initially, developments and improvements in the system were highly technical and relevant to only a relatively small number of specialists in nephrology. More recently, as advances in therapy have demonstrated the value of haemofiltration in the intensive therapy unit and haemoperfusion for certain types of poisoning, the basic principles of haemodialysis have been perceived as important in many areas of clinical practice. In this volume, the potential advantages of bicarbonate haemodialysis are objectively assessed, the technical and clinical aspects of both haemofiltration and haemoperfusion discussed and the continuing problems associated with such extra corporeal circuits analysed. All the chapters have been written by recognized experts in their field. The increasing availability of highly technical facilities for appropriately selected patients should ensure that the information contained in the book is relevant not only to nephrologists but to all practising clinicians. ABOUT THE EDITOR Dr Graeme R. D. Catto is Professor in Medicine and Therapeutics at the University of Aberdeen and Honorary Consultant Physician/Nephrologist to the Grampian Health Board. His current inter

est in transplant immunology was stimulated as a Harkness Fellow at Harvard Medical School and the Peter Bent Brighton Hospital, Boston, USA. He is a member of many medical societies including the Association of Physicians of Great Britain and Ireland, the Renal Association and the Transplantation Society.
