RETHINK Design Guide Nicola Gillen
2021-02-18 The world has changed. How will society emerge post-pandemic? Will we take the opportunity to reset the status quo? And, if so, what possibilities are there for architects to take the initiative in designing this new world? This innovative design guide draws together expert guidance on designing in the immediate aftermath of the pandemic for key architectural sectors: housing, workplace, civic and cultural, hospitality, education, infrastructure and civic placemaking. It provides design inspiration to architects on how they can respond to the challenges and opportunities of a post-pandemic environment and how architects ensure they are at the forefront of the best design in this new world. Looking at each sector in turn, it covers the challenges specific to each, and how delivering these designs might differ from the pre-pandemic world. As well as post-pandemic design, the vital issue of climate change will be threaded through each sector, with many cross-overs between designing for the climate emergency and designing for a world after a pandemic. Both seek to make the world a safer, happier and more resilient place. Written by set of contributing design experts, this book is for all architects, whether sole practitioners or working in a larger practice. As well as inspirational design guidance, it also provides client perspectives – crucial for understanding how clients are planning for the future too.

'*One Planet*' *Cities* David Thorpe 2019-04-30
This book addresses the crucial question of how the essential needs of the growing human population can be met without breaking the Earth's already-stretched life-support system. With four out of five people predicted to be urban dwellers by 2080, 'One Planet' *Cities* proposes a pathway to genuine sustainability for cities and neighbourhoods, using an approach based on contraction and convergence. Utilising interviews with key players, including the Global Footprint Network, World Future Council, WWF, mayors and government officials, and case studies from across the globe, including Europe, North and South America, Australia, South Africa, China and India, David Thorpe examines all aspects of modern society from food provision to neighbourhood design, via industry, the circular economy, energy and transport through the critical lens of the ecological footprint and relevant supporting international standards and indicators. Recommendations on managing supply

chains and impacts, how the transition to a world within limits might be financed, and a deep examination of the Welsh Government's pioneering efforts follow. It concludes with an imagined vision of what a genuinely sustainable future might be like, and an appeal for 'one planeters' everywhere to step up to the challenge. This book will be of great interest to practitioners and policymakers involved in governance, administration, urban environments and sustainability, alongside students of the built environment, urban planning, environmental policy and energy.

Horror in the Age of Steam Carroll Clayton Savant 2021-03-10 Change is terrifying, and rapid change, within a small amount of time, is destabilizing to any culture. England, under the tutelage of Queen Victoria, witnessed precipitous change the likes of which it had not encountered in generations. Wholesale swaths of the economy and the social structure underwent complete recalibration, through the hands of economic progress, industrial innovation, scientific discovery, and social cohesiveness. Faced with such change, Britons had to redefine the concept of work, belief, and even what it meant to be English. Victorians relied on many methods to attempt to release the steam from the anxieties incurred through change, and one of those methods was the horror story of everyday existence during an age of transition. This book is a study of how authors Elizabeth Gaskell, Emily Brontë, and Anne Brontë turned to horrifying representations of everyday reality to illustrate the psychological-traumatic terrors of an age of transition

Off the Main Sequence Tom Easton 2006-10-01 Tom Easton has served as the monthly book review columnist for Analog Science Fiction for almost three decades, having contributed during that span many hundreds of columns and over a million words of penetrating criticism on the best literature that science fiction has to offer. His reviews have been celebrated for their wit, humor, readability, knowledge, and incisiveness. His love of literature, particularly fantastic literature, is everywhere evident in his essays. Easton has ever been willing to cover small presses, obscure authors, and unusual publications, being the only major critic in the field to do so on a regular basis. He seems to delight in finding the rare gem among the backwaters of the publishing field. "A reviewer's job," he says, "is not to judge books for the ages, but

to tell readers enough about a book to give them some idea of whether they would enjoy it." And this he does admirably, whether he's discussing the works of the great writers in the field, or touching upon the least amongst them. This companion volume to "Periodic Stars" (Borgo/Wildside) collects another 250 of Easton's best reviews from the last fifteen years of "The Reference Library." No one does it better, and no other guide provides such lengthy or discerning commentary on the best SF works of recent times. Complete with Introduction and detailed Index.

[The 'One Planet' Life](#) David Thorpe 2014-11-13 The One Planet Life demonstrates a path for everyone towards a way of life in which we don't act as if we had more than one planet Earth. The difference between this approach and others is that it uses ecological footprint analysis to help to determine how effective our efforts are. Much of the book is a manual - with examples - on how to live the 'good life' and supply over 65% of your livelihood from your land with mostly positive impacts upon the environment. It examines the pioneering Welsh policy, One Planet Development, then considers efforts towards one planet living in urban areas. After a foreword by BioRegional/One Planet Living co-founder Pooran Desai and an introduction by former Welsh environment minister Jane Davidson, the book contains: An essay arguing that our attitude to planning, land and

development needs to change to enable truly sustainable development. Guidelines on finding land, finance, and creating a personal plan for one planet living. Detailed guides on: sustainable building, supplying your own food, generating renewable energy, reducing carbon emissions from travel, land management, water supply and waste treatment. 20 exemplary examples at all scales – from micro-businesses to suburbs – followed by Jane Davidson's Afterword. The book will interest anyone seeking to find out how a sustainable lifestyle can be achieved. It is also key reading for rural and built environment practitioners and policy makers keen to support low impact initiatives, and for students studying aspects of planning, geography, governance, sustainability and renewable energy.

find you on the Web Explore advanced options, from graphics editors to streaming audio System Requirements: See CD Installation Instructions page inside **A Beginner's Guide to Learning HTML5** John Rhea 2018-08-01 Tired of the boring, incomprehensible, alphabet soup that coding books throw at you? Prefer to enjoy learning HTML5? Itching to smash zombies while learning how to build websites? You're in luck. Only your web development skills can save the planet from the hordes of zombies that walk our streets. As everyone assuredly knows (because the author didn't make it up at all) creating web pages is the only sure way to kill a zombie, well that and a shotgun... This book will get you beating down hordes in a post-apocalyptic second with HTML5. What You'll Beat Zombies With Besides learning how to punch a zombie in the HTML5, you'll learn the major HTML elements that make up a modern web page and how to put them to good use. You'll learn the structural underpinnings of a web page, how to mark up text, how to wrangle attributes, and ways to embed images, audio, and video. By the time you're done you'll understand HTML, know how to build your own web page, and pwn zombies with your skills. How You'll Learn to Smack Zombies Around You won't just passively take in the view, like a zombie shuffling across the mainland. You'll have plenty of combat practice with analogies, examples, and code tutorials you can build, break and fix again. Working with your hands and your head you'll craft code that pleases the eye and knocks a zombie into last Tuesday. All the code and directions are provided as both codepen tutorials and downloadable html files, so you can fight the apocalypse how and where you like. You can work with them on the codepen site or on your own device. And later you'll bring those skills together in a final project that cements those skills into zombie smashing muscle memory. Why Zombies? Are zombies just a gimmick? Why would this be any better than a straight laced book that sticks to the facts? Straight laced books are often straight boring. And if you have insomnia problems go buy that

book. The author, John, has read the boring books and knows that staying awake and engaged are also important for learning. But this book uses zombie references and analogies not just to make you smile, but to help the material stick. If a tough technical concept is related in silly terms you understand, like a zombie trying to buy gum at a super market, it's much more likely to stay in that brain those zombies are intent on eating. There's no reason good learning can't live right alongside good fun. So grab your computer, grab your sense of humor and hit that buy button. We've got websites to build and zombies to smack.

Planetary Cartography and GIS Henrik Hargitai 2019-02-22 This book approaches geological, geomorphological and topographical mapping from the point in the workflow at which science-ready datasets are available. Though there have been many individual projects on dynamic maps and online GISs, in which coding and data processing are given precedence over cartographic principles, cartography is more than "just" processing and displaying spatial data. However, there are currently no textbooks on this rapidly changing field, and methods tend to be shared informally. Addressing this gap in the literature, the respective chapters outline many topics pertaining to cartography and mapping such as the role and definition of planetary cartography and (vs?) Geographic Information Science; theoretical background and practical methodologies in geological mapping; science-ready versus public-ready products; a goal/procedure-focused practical manual of the most commonly used software in planetary mapping, which includes generic (ArcGIS and its extensions, JMARS) and specific tools (HiView, Cratertools etc.); extracting topographic information from images; thematic mapping: climate; geophysics; surface modeling; change detection; landing site selection; shared maps; dynamic maps on

the web; planetary GIS interfaces; crowdsourcing; crater counting techniques; irregular bodies; geological unit symbology; mapping center activities; and web services. All chapters were prepared by authors who have actually produced geological maps or GISs for NASA / the USGS, DLR, ESA or MIIGAIK. Taken together, they offer an excellent resource for all planetary scientists whose research depends on mapping, and for students of astrogeology.
