New Trends in Stochastic Analysis and Related Topics Huaizhong Zhao 2012 The volume is dedicated to Professor David Elworthy to celebrate his fundamental contribution and exceptional influence on stochastic analysis and related fields. Stochastic analysis has been profoundly developed as a vital fundamental research area in mathematics in recent decades. It has been discovered to have intrinsic connections with many other areas of mathematics such as partial differential equations, functional analysis, topology, differential geometry, dynamical systems, etc. Mathematicians developed many mathematical tools in stochastic analysis to understand and model random phenomena in physics, biology, finance, fluid, environment science, etc. This volume contains 12 comprehensive review/new articles written by world leading researchers (by invitation) and their collaborators. It covers stochastic analysis on manifolds, rough paths, Dirichlet forms, stochastic partial differential equations, stochastic dynamical systems, infinite dimensional analysis, stochastic flows, quantum stochastic analysis and stochastic Hamilton Jacobi theory. Articles contain cutting edge research methodology, results and ideas in relevant fields. They are of interest to research mathematicians and postgraduate students in stochastic analysis, probability, partial differential equations, dynamical systems, mathematical physics, as well as to physicists, financial mathematicians, engineers, etc.

Silence within and beyond Pedagogical Settings Eva Alerby 2020-09-15 This book explores the significance of silence within and beyond pedagogical contexts. Silence is a complex and multidimensional phenomenon for everyday life: since schools mirror society, it is also significant in education. While silence can be experienced in a multitude of different ways, the author reflects on whether silence itself can bear a message: is there an aspect of dialogue in silence, or is it a language all of its own? This book examines a variety of silences essential for education, examining such topics as silence and aspects of power, silent students, and the relationship between listening and silence. Drawing on a range of empirical data, the author elucidates the significance of silence in pedagogical contexts.

Making Sense of Data II Glenn J. Myatt 2009-03-04 A hands-on guide to making valuable decisions from data using advanced data mining methods and techniques This second installment in the Making Sense of Data series continues to explore a diverse range of commonly used approaches to making and communicating decisions from data. Delving into more technical topics, this book equips readers with advanced data mining methods that are needed to successfully translate raw data into smart decisions across various fields of research including business, engineering, finance, and the social sciences. Following a comprehensive introduction that details how to define a problem, perform an analysis, and deploy the results, Making Sense of Data II addresses the following key techniques for advanced data analysis: Data Visualization reviews principles and methods for understanding and communicating data through the use of visualization including single variables, the relationship between two or more variables, groupings in data, and dynamic approaches to interacting with data through graphical user interfaces. Clustering outlines common approaches to clustering data sets and provides detailed explanations of methods for determining the distance between observations and procedures for clustering observations. Agglomerative hierarchical clustering, partitioned-based clustering, and fuzzy clustering are also discussed. Predictive Analytics presents a discussion on how to build and assess models, along with a series of predictive analytics that can be used in a variety of situations including principal component analysis, multiple linear regression, discriminate analysis, logistic regression, and Naïve Bayes. Applications demonstrates the current uses of data mining across a wide range of industries and features case studies that illustrate the related applications in real-world scenarios. Each method is discussed within the context of a data mining process including defining the problem and deploying the results, and readers are provided with guidance on when and how each method should be used. The related Web site for the series (www.makingsenseofdata.com) provides a hands-on data analysis and data mining experience. Readers wishing to gain more practical experience will benefit from the tutorial section of the book in conjunction with the Traceis™ software, which is freely available online. With its comprehensive collection of advanced data mining methods coupled with tutorials for applications in a range of fields, Making Sense of Data II is an indispensable book for courses on data analysis and data mining at the upper-undergraduate and graduate levels. It also serves as a valuable reference for researchers and professionals who are interested in learning how to accomplish effective decision making from data and understanding if data analysis and data mining methods could help their organization.

Micro and Nano Flow Systems for Bioanalysis Michael W. Collins 2012-12-13 Micro and Nano Flow Systems for Bioanalysis addresses the latest developments in biomedical engineering at very small scales. It shows how organic systems require multi-scale understanding in the broadest sense whether the approach is experimental or mathematical, and whether the physiological state is healthy or diseased. Micro-and nano-fluidics represent key areas of translational research in which state-of-the-art engineering processes and devices are applied to bedside monitoring and treatment. By applying conventional micro- and nano-engineering to complex organic solids, fluids, and their interactions,

leading researchers from throughout the world describe methods and techniques with great potential for use in medicine and clinical practice. Coverage includes the seeming plethora of new, fine-scale optical methods for measuring blood flow as well as endothelial activation and interaction with tissue. Generic areas of modeling and bioelectronics are also considered. In keeping with the recurring theme of medicine and clinical practice, approximately half of the chapters focus on the specific application of micro- and nano- flow systems to the understanding and treatment of cancer and cardiovascular diseases. This book developed from an Expert Overview Session on "Micro & Nano Flows in Medicine: the way ahead" at the 3rd Micro and Nano Flows Conference (MNF2011) held in Thessaloniki, Greece. Additional chapters were included to enhance the international, state-of-the-art coverage.

Migrant Children in State/Quasi-state Schools in Urban China Hui Yu 2021-11-19 Highlighting the changing landscape of Chinese urban state schools under the pressure of recruiting a tremendous number of migrant children, this book examines the quality of state educational provisions from demographic, institutional, familial and cultural angles. Rooted in rich qualitative data from five Chinese metropolitan cities, it identifies the demographic changes in many state schools of becoming 'migrant majority' and the institutional reformation of 'interim quasi-state' schools under a low cost and inferior schooling approach. This book also digs into the 'black box' of cultural reproduction in school and family processes, revealing both a gloomy side of many migrant children's academic underachievement as a result of troubled home-school relations and a bright side that social inclusion of migrant children in state school promotes their adaptation to urban life. The author concludes that migrant children's experiences in state (and quasi-state) schools turn them into a generation of 'new urban working-class'. The monograph will be of interest to scholars, students, practitioners and policymakers who want to better understand educational equality for migrants and other marginalised groups.

Poems Live Like a River Lisa Shenouda Koslow 2020-08-17 —The words in this book are not meant to win accolades or awards, rather a personal way to broaden my vision about what happens around me, leading me to discover and share this life with its many mysteries. The vagaries of our lives are often a challenge, finding words to respond is a natural reaction to me. Being born in NYC and the living abroad, between the ages of three and eight, added a larger, global layer to my life. My Egyptian father and Hungarian mother promoted this influence for both my younger brother and me. Growing up, we always had visitors in our home from a variety of ethnic backgrounds and religions, as were my parents themselves. Later, as an adult, my own travels added to this world view, for which I am eternally grateful. I feel blessed at having had wonderful parents and an amazing husband in the course of my long life. In the years since they have been gone, writing has become a way for me to forge my own path. As a child and until now, I am happy reader, always enchanted by words and their power and sometimes even their soothing effect. I hope that you, the reader, will find some meaning or delight in my words. I am honored to share some thoughts, from my world. 978-1-61493-717-3
