Masters of Craft Richard E. Oejo 2018-11-13 In today's new economy—in which “good” jobs are typically knowledge or technology based—many well-educated and culturally savvy young people are instead choosing to pursue traditionally low-status manual labor occupations as careers. Masters of Craft looks at the renaissance of four such trades: bartending, distilling, barbering, and butchering. In this engaging book, Richard Oejo takes you into the lives and workplaces of these people to examine how they are transforming once-undesirable jobs into “cool” and highly specialized upscale occupations. He shows how they find meaning in these jobs by enacting a set of “cultural repertoires,” resulting in a new form of elite taste-making. Focusing on cocktail bartenders, craft distillers, upscale men’s barbers, and whole-animal butcher shop workers in Manhattan, Brooklyn, and upstate New York, Masters of Craft provides new insights into the stratification of taste, the spread of gentrification, and the evolving labor market in today’s postindustrial city.

Nanomaterials by Severe Plastic Deformation: NanoSPD5 Jing Tao Wang 2010-12-30 Volume is indexed by Thomson Reuters CPCI-S (WoS). The 200 peer-reviewed articles in this □Nanomaterials by Severe Plastic Deformation□ special collection are a convincing demonstration of the relevance of bulk ultrafine grained and nanostructured materials, produced by severe plastic deformation, to a wide range of researchers and engineers., The total number of articles in this edition, larger than that in the 2008 edition, shows that this community is, in fact, growing. The coverage includes all aspects of NanoSPD: Principles of SPD Processing, Microstructural Evolution and Grain Refinement, Mechanical Properties of SPD Materials, Functional and other Properties of SPD Materials, Innovation and Applications.

Adventures in Human Being Gavin Francis 2015-10-13 "Adventures in Human Being, with its deft mix of the clinical and the lyrical, is a triumph of the eloquent brain and the compassionate heart."--Wall Street Journal We assume we know our bodies intimately, but for many of us they remain uncharted territory, an enigma of bone and muscle, neurons and synapses. How many of us understand the way seizures affect the brain, how the heart is connected to well-being, or the why the foot holds the key to our humanity? In Adventures in Human Being, award-winning author Gavin Francis leads readers on a journey into the human body, offering a guide to its inner workings and a celebration of its marvels. Drawing on his experiences as a surgeon, ER specialist, and family physician, Francis blends stories from the clinic with episodes from medical history, philosophy, and literature to describe the body in sickness and in health, in living and in dying. At its heart, Adventures in Human Being is a meditation on what it means to be human. Poetic, eloquent, and profoundly perceptive, this book will transform the way you view your body.

High Tech Trash Elizabeth Grossman 2007-09-15 An environmental journalist reveals that digital may be sleek, but it's anything but clean. Deep within every electronic device lie toxic materials that make up the bits and bytes, a complex thicket of lead, mercury, cadmium, plastics, and a host of other often harmful ingredients.

The New Agrarianism Eric T. Freyfogle 2001-09 The engaging writings gathered in this new book explore an important but little-publicized movement in American culture -- the marked resurgence of agrarian practices and values in rural areas, suburbs, and even cities. It is a movement that in widely varied ways is attempting to strengthen society's roots in the land while bringing greater health to families, neighborhoods, and communities. The New Agrarianism vividly displays the movement's breadth and vigor, with selections by such award-winning writers as Wendell Berry, William Kittredge, Stephanie Mills, David Orr, Scott Russell Sanders, and Donald Worster. As editor Eric Freyfogle observes in his stimulating and original introduction, agrarianism is properly conceived in broad terms, as reaching beyond food production to include a wide constellation of ideals, loyalties, sentiments, and hopes. It is a temperament and a moral orientation, he explains, as well as a suite of diverse economic practices -- all based on the insistent truth that people everywhere are part of the land community, as dependent as other life on its fertility and just as shaped by its mysteries and possibilities. The writings included here have been chosen for their engaging narratives as well as their depiction of the New Agrarianism's broad scope. Many of the selections illustrate agrarian practitioners in action -- restoring prairies, promoting community forests and farms, reducing resource consumption, reshaping the built environment. Other selections offer pointed critiques of contemporary American culture and its market-driven, resource-depleting competitiveness. Together, they reveal what Freyfogle identifies as the heart and soul of the New Agrarianism: its yearning to regain society's connections to the land and its quest to help craft a more land-based and enduring set of shared values. The New Agrarianism offers a compelling vision of this hopeful new way of living. It is

an essential book for social critics, community activists, organic gardeners, conservationists, and all those seeking to forge sustaining ties with the entire community of life.

The End of Nature Bill McKibben 2006-06-13 Reissued on the tenth anniversary of its publication, this classic work on our environmental crisis features a new introduction by the author, reviewing both the progress and ground lost in the fight to save the earth. This impassioned plea for radical and life-renewing change is today still considered a groundbreaking work in environmental studies. McKibben's argument that the survival of the globe is dependent on a fundamental, philosophical shift in the way we relate to nature is more relevant than ever. McKibben writes of our earth's environmental cataclysm, addressing such core issues as the greenhouse effect, acid rain, and the depletion of the ozone layer. His new introduction addresses some of the latest environmental issues that have risen during the 1990s. The book also includes an invaluable new appendix of facts and figures that surveys the progress of the environmental movement. More than simply a handbook for survival or a doomsday catalog of scientific prediction, this classic, soulful lament on Nature is required reading for nature enthusiasts, activists, and concerned citizens alike. *By the Sword* Richard Cohen 2007-12-18 “Like swordplay itself, *By the Sword* is elegant, accurate, romantic, and full of brio—the definitive study, hugely readable, of man’s most deadly art.”—Simon Winchester With a new Preface by the author Napoleon fenced. So did Shakespeare, Karl Marx, Grace Kelly, and President Truman, who as a schoolboy would practice fencing with Bess—his future wife— when the two of them returned home from school. Lincoln was a canny dueler. Ignatius Loyola challenged a man to a duel for denying Christ’s divinity (and won). Less successful, but no less enthusiastic, was Mussolini, who would tell his wife he was “off to get spaghetti,” their code to avoid alarming the children. By the Sword is an epic history of sword fighting—a science, an art, and, for many, a religion that began at the dawn of civilization in ancient Egypt and has been an obsession for mankind ever since. With wit and insight, Richard Cohen gives us an engrossing history of the world via the sword. Praise for *By the Sword* “Touché! While scrupulous and informed about its subject, Richard Cohen’s book is about more than swordplay. It reads at times like an alternative social history of the West.”—Sebastian Faulks “In writing *By the Sword*, [Cohen] has shown that he is as skilled with the pen as he is with the sword.”—The New York Times “Irresistible . . . extraordinary . . . vivid and hugely enjoyable.”—The Economist “A virtual encyclopedia on the subject of sword fighting.”—San Francisco Chronicle “Literate, learned, and, beg pardon, razor-sharp . . . a pleasure for practitioners, and a rewarding entertainment for the armchair swashbuckler.”—Kirkus Reviews (starred review)

From Africa with Love Mae Ella Wright 2016-08-05 This book was written to expose the suffering, pain, and devastation the African people are subjected to by their political leaders, who were elected to office under questionable circumstances and by a rigged election and who subjects the people to horrific human rights violations while leaving a country that is ravaged by war and depleted of its rich natural resources. Proceeds of this book will go to water wells in Africa and to the hospitals in Sub-Saharan Africa to maintain sanitation and sterilization and to aid in the eradication of the Ebola virus and all contagions of that nature. Like a tree planted by rivers of water, that bears fruit in its season, whose leaves never wither, whatever I do prospers (Ps. 1:3).

Cobalt Red Siddharth Kara 2023-01-31 An unflinching investigation reveals the human rights abuses behind the Congo’s cobalt mining operation—and the moral implications that affect us all. Cobalt Red is the searing, first-ever exposé of the immense toll taken on the people and environment of the Democratic Republic of the Congo by cobalt mining, as told through the testimonies of the Congolese people themselves. Activist and researcher Siddharth Kara has traveled deep into cobalt territory to document the testimonies of the people living, working, and dying for cobalt. To uncover the truth about brutal mining practices, Kara investigated militia-controlled mining areas, traced the supply chain of child-mined cobalt from toxic pit to consumer-facing tech giants, and gathered shocking testimonies of people who endure immense suffering and even die mining cobalt. Cobalt is an essential component to every lithium-ion rechargeable battery made today, the batteries that power our smartphones, tablets, laptops, and electric vehicles. Roughly 75 percent of the world’s supply of cobalt is mined in the Congo, often by peasants and children in sub-human conditions. Billions of people in the world cannot conduct their daily lives without participating in a human rights and environmental catastrophe in the Congo. In this stark and crucial book, Kara argues that we must all care about what is happening in the Congo—because we are all implicated.

Plastic, Copper, and the Hundred Thousand Percent Markup Mikayla Zai Dovi 2014-11-27 The copper intrauterine device (IUD) has been described as an "unsung, under-promoted success story," and the "preferred device... on the basis of its efficacy, safety and long history of use," and is often hailed as the "international gold standard" in contraceptives. It is arguably the safest, most reliable, and most economical contraceptive option for women. It is also, in its construction, little more than a sterilized piece of plastic and copper-albeit a very useful one. Despite costing only

approximately \$0.25 to produce, it can cost nearly \$1,000 in the United States, compared to under \$100 in Canada and Europe, close to \$5 in other nations, and as low as \$0.31 in Chile. This book explains circumstances unique to the United States which have allowed this kind of market failure and price discrimination to flourish, as well as consequently perpetuated inequality of opportunity, fiscal waste, compromises in medical safety, and restrictions to consumer freedom.

Introduction to Energy and Climate Julie Kerr 2017-08-09 The purpose of this textbook is to provide a well-rounded working knowledge of both climate change and environmental sustainability for a wide range of students. Students will

learn core concepts and methods to analyze energy and environmental impacts; will understand what is changing the earth's climate, and what that means for life on earth now and in the future. They will also have a firm understanding of what energy is and how it can be used. This text intends to develop working knowledge of these topics, with both technical and social implications. Students will find in one volume the integration and careful treatment of climate, energy, and sustainability.
