Rethinking Professionalism Kristina Huneault 2012-04-11 The history of women and art in Canada has often been celebrated as a story of progress from amateur to professional practice. Rethinking Professionalism challenges this narrative by questioning the assumptions that underlie the category of artistic professionalism, a construct as influential for artistic practice as it has been for art historical understanding. Through a series of in-depth studies, contributors examine changes to the infrastructure of the art world that resulted from a powerful discourse of professionalization that emerged in the late- nineteenth century. While many women embraced this new model, others fell by the wayside, barred from professional status by virtue of their class, their ethnicity, or the very nature of the artworks they produced. The richly illustrated essays in this collection depict the changing nature of the professional paradigm as it was experienced by women painters, photographers, craftspeople, architects, curators, gallery directors, and art teachers. In so doing, they demonstrate the ongoing power of feminist art history to disrupt patterns of thought that have become naturalized and, accordingly, invisible. Going beyond the narratives of recovery or exclusion that the category of professionalism has traditionally encouraged, Rethinking Professionalism explores the very consequences of telling the history of women's art in Canada through that lens. Contributors include Annmarie Adams (McGill University), Alena Buis (Queen's University), Sherry Farrell Racette (University of Manitoba), Cynthia Hammond (Concordia University), Kristina Huneault (Concordia University), Loren Lerner (Concordia University), Lianne McTavish (University of Alberta), Kirk Niergarth (Mount Royal University), Mary O'Connor (McMaster University), Sandra Paikowsky (Concordia University), Ruth B. Phillips (Carleton University), Jennifer Salahub (Alberta College of Art & Design), and Anne Whitelaw (Concordia University).

Protein Engineering Protocols Kristian Müller 2007-10-26 Protein engineering is a fascinating mixture of molecular biology, protein structure analysis, computation, and biochemistry, with the goal of developing useful or valuable proteins. Protein Engineering Protocols will consider the two general, but not mutually exclusive, strategies for protein engineering. The first is known as rational design, in which the scientist uses detailed knowledge of the structure and function of the protein to make desired changes. The s- ond strategy is known as directed evolution. In this case, random mutagenesis is applied to a protein, and selection or screening is used to pick out variants that have the desired qualities. By several rounds of mutation and selection, this method mimics natural evolution. An additional technique known as DNA shuffling mixes and matches pieces of successful variants to produce better results. This process mimics recombination that occurs naturally during sexual reproduction. The first section of Protein Engineering Protocols describes rational p- tein design strategies, including computational methods, the use of non-natural amino acids to expand the biological alphabet, as well as impressive examples for the generation of proteins with novel characteristics. Although procedures for the introduction of mutations have become routine, predicting and und- standing the effects of these mutations can be very challenging and requires profound knowledge of the system as well as protein structures in general.

Protein Analysis and Purification Ian M. Rosenberg 2013-12-01 How one goes about analyzing proteins is a constantly evolving field that is no longer solely the domain of the protein biochemist. Investi gators from diverse disciplines find themselves with the unanticipated task of identifying and analyzing a protein and studying its physical properties and biochemical interactions. In most cases, the ultimate goal remains understanding the role(s) that the target protein is playing in cellular physiology. It was my intention that this manual would make the initial steps in the discovery process less time consuming and less intimidating. This book is not meant to be read from cover to cover. The expanded Table of Contents and the index should help locate what you are seeking. My aim was to provide practically oriented information that will assist the experimentalist in benchtop problem solving. The appendices are filled with diverse information gleaned from catalogs, handbooks, and manuals that are presented in a distilled fashion designed to save trips to the library and calls to technical service representatives. The user is encouraged to expand on the tables and charts to fit individual experimental situations. This second edition pays homage to the computer explosion and the various genome projects that have revolutionized how benchtop scientific research is performed. Bioinformatics and In silica science are here to stay. However, the second edition still includes recipes for preparing buffers and methods for lysing cells.

Proteomics Sample Preparation Jörg von Hagen 2011-08-24 This long-awaited first guide to sample preparation for proteomics studies overcomes a major bottleneck in this fast growing technique within the molecular life sciences. By addressing the topic from three different angles -- sample, method and aim of the study -- this practical reference has something for every proteomics researcher. Following an introduction to the field, the book looks at sample preparation for specific techniques and applications and finishes with a section on the preparation of sample types. For each method described, a summary of the pros and cons is given, as well as step-by-step protocols adaptable to any specific proteome analysis task.

Baseball: How To Play The Game Pete Williams 2011-03-08 Major League Baseball has compiled the definitive instruction manual on learning to play the game. Fully illustrated with action photos of MLB stars illustrating key points and drills for each defensive position, this book also includes special tips from MLB players on batting, base running, the rules of the game, and coaching. Easy-to-follow instructions and diagrams of all the skills beginning players need to master the game--how to throw, hit, and field all the positions--while also promoting good sportsmanship. Each skill and position is presented separately, with photographs and drawings of a player executing the specific skill, advice on how to perform it, and when to use it, and the most common mistakes. Written and compiled by the best baseball instructors, coaches, and players in the world, this comprehensive how-to is informative enough to help even the brightest young stars shine brighter. With keen insights from instruction and developmental coaches, the need to create a positive environment in practice and encourage creativity as well as technical correctness is stressed. Most importantly, the coaches understand that kids are not just small adults--and they back up their understanding with advice on how to help kids fall in love with "America's pastime." Model training sections construct excellent practice sessions--from warm-up through cool-down exercises and hundreds of drills and games to reinforce--this is an essential tool for all coaches as a guide to improving performance and enjoyment of practice and playing the game. This must-have resource covers it all: Batting, Pitching, Base running and sliding, Specific drills for playing all defensive positions, Coaching and rules, Offensive and defensive strategy. Partial list of Big League tips on How to Play the Game: Tony Gwynn (hitting), Sammy Sosa (judging fly balls), Bernie Williams (playing the outfield), Mark Grace (approach to hitting), Alex Rodriguez (fielding ground balls), Jeff Bagwell (hitting), Roberto Alomar (fielding ground balls), Jaret Wright (pitching mechanics), Edgar Renteria (how to play SS), John Lackey (improving your pitching), Carlos Delgado (mastering 1B), Rocco Baldelli (basic approach at plate), Cristian Guzman (fielding ground balls), Danny Kolb (good approach on the mound), Dontrelle Willis (pitching strategies), Torii Hunter (playing the outfield), Jason Marquis (pitching with control), Chone Figgins (sliding), Orlando Cabrera (improving your game), Gary Bennett (becoming a better catcher), Ervin Santana (pitching under pressure), Mark Teixeira (playing 1B), Ryan Howard (hitting), Joey Gathright (playing the OF), Troy Tulowitzki (succeeding at the plate), Joel Zumaya (pitching with poise), Josh Johnson (pitching with confidence)
