The Art of Intelligence William J. Lahman 2014-03-13 Since the 9/11 attacks, the number of intelligence courses and related curricula have soared. Many instructors look for interactive learning tools because they add immeasurable value to the student's understanding of the intelligence enterprise. Such tools, however, take time and effort to develop and are not circulated among faculty. This is the first textbook to offer in one volume original simulations, exercises, and games designed by academics and intelligence professionals from several countries. These innovative methods are meant to enhance the learning experience and provide an international perspective to the topics and approaches discussed in class. Intelligence simulations and games are presented in ready-to-run formats, from easy instructions to result recordings matrices, to minimize preparation time for both instructors and students. Exercises, such as cyber attack simulation, information sharing, ethical scenarios and more, expose the student to the many subtle aspects of the intelligence enterprise through active role-playing in simulations and game exercises. The cases cover a wide range of key analytical issues and contexts with an international focus for an innovative text that will suit intelligence training courses at all levels.

Neurobiology of Motor Control Scott L. Hooper 2017-06-12 A multi-disciplinary look at the current state of knowledge regarding motor control and movement—from molecular biology to robotics The last two decades have seen a dramatic increase in the number of sophisticated tools and methodologies for exploring motor control and movement. Multi-unit recordings, molecular neurogenetics, computer simulation, and new scientific approaches for studying how muscles and body anatomy transform motor neuron activity into movement have helped revolutionize the field. Neurobiology of Motor Control brings together contributions from an interdisciplinary group of experts to provide a review of the current state of knowledge about the initiation and execution of movement, as well as the latest methods and tools for investigating them. The book ranges from the findings of basic scientists studying model organisms such as *Caenorhabditis elegans* and *Drosophila*, to biomedical researchers investigating vertebrate motor production to neuroengineers working to develop robotic and smart prostheses technologies. Following foundational chapters on current molecular biological techniques, neuronal ensemble recording, and computer simulation, it explores a broad range of related topics, including the evolution of motor systems, directed targeted movements, plasticity and learning, and robotics. Explores motor control and movement in a wide variety of organisms, from simple invertebrates to human beings Offers concise summaries of motor control systems across a variety of animals and movement types Explores an array of tools and methodologies, including electrophysiological techniques, neurogenic and molecular techniques, large ensemble recordings, and computational methods Considers unresolved questions and how current scientific advances may be used to solve them going forward Written specifically to encourage interdisciplinary understanding and collaboration, and offering the most wide-ranging, timely, and comprehensive look at the science of motor control and movement currently available, Neurobiology of Motor Control is a must-read for all who study movement production and the neurobiological basis of movement—from molecular biologists to roboticists.

Bloc TV : Project Birch IA corvin dhal 2012-06-01 A concept derived from an "On-Site" video production, for what was then known as "Bloc Music Festival". The year is two thousand and twelve [2012]. The event was held over a two to three [2-3] day period, at a holiday camping site. The "site" comprised of chalets, for small to medium sized groups or parties. What was unique was a composition created by the festival promoters. The holiday site had the ability to broadcast via an "internal closed loop", television network", to every chalet within the holiday park. This was incorporated into the festival summary, and a media stream created by someone called "feaver", of abstract and weird content. Which flavoured an unknown aspect of the festival itself, to attendees: being new to content production, the idea in finality is to expand the potential of content. In the awareness that "media" is always a divisible subject, or so the lecture went. [There were no lectures, that was additive]. A pitch was created to take that unknown aspect of the "closed loop", "television network",. And run it through a broadcasting system, which could be formatted for an "online audience", in order to reach people who couldn't attend and raise awareness of the "media stream" that was being broadcast. Via what was then a "closed loop, network" Project Birch : A development pitch for the branding and development of Bloc TV for Bloc Music Festival.

Sport and Exercise Psychology Andrew M Lane 2015-08-26 The new edition of Sport and Exercise Psychology asks four fundamental questions that get to the heart of this flourishing discipline: What inner states influence what people think, feel, and behave? How can people manage or self-regulate their own inner states? How can sport and exercise psychology professionals help people manage their inner states? Is sport psychology just a placebo effect? Taking an applied perspective that bridges the gap between sport and exercise, the book answers these questions by covering the key topics in the field, including confidence, anxiety, self-regulation, stress and self-esteem. There are also chapters on the role of music in performance, imagery and exercise addiction. Each chapter is written by an expert in that field, and includes a range of features illustrating specific issues, either within the research literature or their practical application. This is a comprehensive and engaging overview of an evolving discipline, and will be essential reading to any student of sport and exercise psychology. It will also be of huge interest to athletes and coaches seeking an accessible understanding of the role of psychology in sport.

Jens Hoff 2015-08-20 One of the most heartening developments in climate change mitigation in recent years has been the increasing attention paid to the principle of "thinking globally and acting locally". The failure of the international community to reach significant ~~climate change agreements~~ **Paris Agreement** emissions has led local governments, environmental organisations and citizens themselves to focus increasingly on the local possibilities for action on climate change. This book analyses the strengths and weaknesses of the co-production of climate policies that take place where citizen engagement and local initiatives converge with public agencies. Case studies from Northern Europe, Australia/New Zealand and the USA reveal that traditional individualist approaches to promoting environmental behaviour epitomised by information campaigns and economic incentives cannot trigger the deep behavioural changes required to materially improve our response to climate change. Only by marshalling the forces of thousands, and eventually millions of citizens, can we manage to reach environmental ~~targets~~ **Paris Agreement** and create the new social norms that are sorely needed in our local, and global, response to climate change. This book will be of great relevance to scholars and policy makers with an interest in climate change politics and governance, community engagement and sustainable development.

Pinball Perry Lefko 2009-05-12 In 2004, Michael "Pinball" Clemons became the first black coach in the history of the CFL to hoist the Grey Cup in victory, the culmination of an experience that began when he came to Canada in 1989 as an unheralded American football player deemed too small to make it in the National Football League. Not only did Clemons make it big—literally and figuratively—in the Canadian Football League in a career that spanned 11½ seasons, but he cultivated a reputation as an enduring Canadian figure. In between dazzling people with his on-field exploits that resulted in winning the Most Valuable Player in the Canadian Football League in 1990, he became a Most Valuable Person off the field, too, giving generously of his time to charity and causes. His motivational speaking abilities at countless events have wowed his listeners. And throughout this period, Clemons began to realize that he wanted to make Canada his full-time home, embracing the country that, in turn, has embraced him. The book will focus on how it all came to be and how Mike Clemons' special qualities contributed to making him an enduring Canadian personality, well known beyond the city of Toronto where he became the most popular athlete. It will describe his tremendous natural leadership skills and important inspirational messages to Canadians.
